Cleanings for 1913

The six special numbers for 1912 were received with such enthusiasm that we have decided to outdo our efforts of last year, and we take pleasure, therefore, in presenting the following special numbers for 1913:

Jan. 1--Beginners' Number

Experiences and mistakes of beginners. Beginners' questions. An experience with a swarm of black bees.

Feb. 1--Old-timers' Number

It is a matter of great pride to us that nearly sixty of our present readers were with us back in the "Windmill Days," more than forty years ago, when GLEANINGS first made its feeble start. We have letters from these men that are intensely interesting to the beekeeper of to-day, and we shall publish them. We intend this issue to be a glimpse of beekeeping in by-gone days. In this historical number we hope to show something of the drawbacks that had to be met when beekeeping was in its infancy. Many lessons may be learned by reading history.

March 1--Women's Number

There have been repeated requests for a special number devoted to beekeeping for women. There were many requests for this last year, and we are at last prepared to furnish what we believe is a splendid array of material from

our beekeeping sisters who have made a success with their bees. There are thousands of other women who would be glad to take up bees were it not for their natural timidity, or their fear of stings. This number will serve, not to point out an easy path toward success, but to show how difficulties in the way may be surely overcome.

April 1--Out-apiaries

Ever since our special number on automobiles was out we have received complimentary letters regarding it, and requests for more particular information of the same kind. In this special number we propose to have a full discussion of the automobile as used in out-apiary work, both for hauling and for going to and from the yard. In this number there will also appear many articles regarding the equipment used at out-apiaries as outlined in our editorial, page 610, October 1.

May 1--Swarming and Increase in the North, South, East, and West

This is a subject that is of vital interest to every beekeeper in every locality, and no list of special subjects would be complete

without it. We shall make an effort this year to have articles from all parts of the country, so that no one can complain that the directions given do not apply in his special locality.

July 1--Marketing Honey

We already have a number of splendid articles from experts in this line. Beekeepers are waking up to the possibilities of selling their crop as never before, and those who have heretofore sold at any old price are beginning to realize the mistake they are making. This number will be full of practical suggestions for profitably disposing of the crop.

Aug. 1--Beekeeping as a Recreation

In addition to the army of men and women who are making beekeeping their sole occupation, there is a rapidly increasing number of professional men, lawyers, doctors, ministers, teachers, etc., who find beekeeping a delightful avocation. In this special number some of them will tell why beekeeping is so admirably suited for his purpose. Some "big men" are going to contribute to this number.

We are proud of the fact that GLEANINGS has never had to go begging for material. We have never seen the time yet when we did not have more good articles on hand than we could possibly use. Nevertheless, in spite of this, we are going to solicit this year a large number of the special articles mentioned above. We are not merely going to fill up our pages; we are going to try to give you the very best that we can obtain. Is all this only an introduction to prepare the way for an announcement of a higher subscription rate? It is not. The price remains the same—one dollar per year.

Gleanings in Bee Culture

VOL. XL. JANUARY 1. 1912. NO. 1.

COME SOUTH

—TO—

America's Market Gardens

Be healthy, happy and independent, under clear skies in a progressive country, raising GRAPE FRUIT, ORANGES, ETC. Fruits and vegetables are grown to perfection in the Six Southern States (Virginia, North Carolina, South Carolina, Georgia, Florida and Alabama), traversed by the Seaboard Air Line Railway,

FROM THE PEANUT FIELDS OF VIRGINIA TO THE ORANGE GROVES OF FLORIDA

Fertile land is now cheap—\$10.00 per acre and up, but will soon advance. Every inducement is offered to the man of limited means. Farms can be bought on easy terms. Low freight rates—quick transportation to the big markets. Good roads, schools and churches. Plenty of water—ideal climate the year 'round, no extreme heat or cold—high class labor. We want more good people, we have a big country full of natural advantages, close to large towns—not in a wilderness. An investment in Real Estate here is absolutely safe. Ten acres will make you independent. Hundreds of satisfied settlers are becoming wealthy, and enjoying life. You can do the same. **In the land of Manatee on the West Coast of FLORIDA you can**

raise two to three crops a year—net \$500 to \$1000 an acre. **Build a Home for your Family NOW.** Give them the many advantages which were denied you. For handsome booklet and literature, write at once to:

**J. A. PRIDE, Gen. Ind. Agt.,
Seaboard Air Line Railway,
Suite 611. NORFOLK, VA.**

Peach Trees.

free to everybody.

800,000 Peaches, 5 to 7 feet, 10c; 4 to 5 ft., 8c; 3 to 4 feet, 6c; 2 to 3 ft., 4c. 200,000 Apples, 50,000 Pears, 50,000 Plums, 100,000 Cherry, 300,000 Carolina Poplar, and millions of Grape and Small Fruits. Secure varieties now, pay in Spring. Buy from the man who has the goods and save disappointment. Catalog

Sheerin's Wholesale Nurseries, Dansville, N. Y.

In Africa

**"Falcon"
Hives
are the
Standards**

It might surprise many bee-keepers in this country to hear that our largest customer of **double-walled air spaced hives** is in South Africa. Such is the case; and we also ship great numbers of dovetailed hives, quantities of sections, foundation; and other supplies, to that country, which is fast coming to the front in things apicultural.

Many bee-keepers in America do not realize the importance, or have an adequate conception of the immensity of the bee-industry in foreign lands. Shipping as we do to all lands we have opportunity daily to see what is being done in other lands in our favorite industry. Among the countries in which the bee-industry is rapidly increasing is South Africa; and, as in other countries, **"Falcon"** supplies are their standard; and wisely have they chosen. The absolutely adaptability of our hives to all climates, and their perfect manufacture from well-seasoned lumber of the best quality, enabling them to be put together with ease after long ocean voyages, makes fast friends with our foreign friends who try **"Falcon"** goods once.

Shipments to some foreign customers date back 25 years, and we are still selling the same parties—proof conclusive that

"Falcon" Goods Deserve to be Standards.

The increase in the sale of our hives, foundation, and other supplies in foreign lands more than keeps pace with the increase in this country. We have established dealers in Mexico, Cuba, Santo Domingo, Jamaica, Port Rico, South America, British Isles, Germany, Turkey, South Africa, Australia, New Zealand, Hawaiian Islands, and purchasers of our goods in many other countries. We are pre-eminently fitted to take care of the wants of bee-keepers, no matter in how remote a section of the globe from Falconer, N. Y., U. S. A.

Distributors in the United States.

To enable our ever rapidly increasing number of customers in all States to get **"Falcon"** supplies quickly with only earload freight rates to pay we have established distributors in all parts of this country.

Georgia:—J. J. Wilder, Cordele.

California:—John C. Frohlinger, 257-259 Market St., San Francisco.

Missouri:—C. C. Clemons Bee Supply Co., 130 Grand Ave., Kansas City.

Ohio:—Fred W. Muth Co., 51 Walnut St., Cincinnati.

Illinois:—W. T. Falconer Mfg. Co., Branch, 117 No. Jefferson St., Chicago.

Pennsylvania:—A. M. Applegate, Reynoldsville.

J. R. Rambo, Collingdale, suburb of Philadelphia.

New York:—Derooy Taylor, Lyons.

W. T. Falconer Mfg. Co., Falconer.

Texas:—J. W. Reid, Uvalde.

Massachusetts:—Ross Bros. Co., Worcester.

Rhode Island:—Cull & Williams Co., 180 Washington St., Providence.

Hundreds of other dealers in the United States handle **"Falcon"** goods in smaller quantities; still they have a full assortment, and can give your wants prompt attention. If you do not know the name of the dealer in your section, send us a list of your wants for quotation from our nearest location—delivered, if you wish—less early-order discount.

Send for a **Red Catalog**.

January early-order discount at all **"Falcon"** dealers, 3 per cent.

W. T. FALCONER MFG. COMPANY,

Where the good bee-hives come from

Factory--Falconer, N. Y.

117 North Jefferson St., Chicago, Ill.

Honey Markets

The prices listed below are intended to represent, as nearly as possible, the average market prices at which honey and beeswax are selling at the time of the report in the city mentioned. Unless otherwise stated, this is the price at which sales are being made by commission merchants or by producers direct to the retail merchant. When sales are made by commission merchants the usual commission (from five to ten per cent), cartage, and freight will be deducted; and in addition there is often a charge for storage by the commission merchant. When sales are made by the producer direct to the retailer, commission and storage, and other charges, are eliminated. Sales made to wholesale houses are usually about ten per cent less than those to retail merchants.

EASTERN GRADING RULES FOR COMB HONEY.

FANCY.—All sections well filled, combs straight, firmly attached to all four sides, the combs unsoiled by travel-stain or otherwise, all the cells sealed except an occasional one, the outside surface of the wood well scraped of propolis.

No. 1.—All sections well filled except the row of cells next to the wood; combs straight; one-eighth part of comb surface soiled, or the entire surface slightly soiled; the outside surface of the wood well scraped of propolis.

No. 1.—All sections well filled except the row of cells next to the wood; combs comparatively even; one-eighth part of comb surface soiled, or the entire surface slightly soiled.

No. 2.—Three-fourths of the total surface must be filled and sealed.

No. 3.—Must weigh at least half as much as a full-weight section.

In addition to this the honey is to be classified according to color, using the terms white, amber, and dark; that is, there will be "Fancy white," "No. 1 Dark," etc.

NEW COMB-HONEY GRADING-RULES ADOPTED BY THE COLORADO STATE BEE-KEEPERS' ASSOCIATION.

No. 1 WHITE.—Sections to be well filled and evenly capped except the outside row, next to the wood; honey white or slightly amber, comb and cappings white, and not projecting beyond the wood; wood to be well cleaned; cases of separated honey to average 21 pounds net per case of 24 sections, no section in this grade to weigh less than 13½ ounces.

Cases of half-separated honey to average not less than 22 pounds net per case of 24 sections.

Cases of unseparated honey to average not less than 23 pounds net per case of 24 sections.

No. 1 LIGHT AMBER.—Sections to be well filled and evenly capped, except the outside row, next to the wood; honey white or light amber; comb and cappings from white to off color, but not dark; comb not projecting beyond the wood; wood to be well cleaned.

Cases of separated honey to average 21 pounds net per case of 24 sections; no section in this grade to weigh less than 13½ ounces.

Cases of half-separated honey to average not less than 22 pounds net per case of 24 sections.

Cases of unseparated honey to average not less than 23 pounds net per case of 24 sections.

No. 2.—This includes all white honey, and amber honey not included in the above grades; sections to be fairly well filled and capped, no more than 25 un-

capped cells, exclusive of outside row, permitted in this grade, wood to be well cleaned, no section in this grade to weigh less than 12 ounces.

Cases of separated honey to average not less than 19 pounds net.

Cases of half-separated honey to average not less than 20 pounds net per case of 24 sections.

Cases of unseparated honey to average not less than 21 pounds net per case of 24 sections.

BOSTON.—We quote fancy white comb at 17 to 18; light amber, 15; amber, 14; fancy white extracted, 10 to 11; light amber, 9 to 10; amber, 9. Beeswax, 30. Boston, Dec. 18. **BLAKE-LEE CO.**

ALBANY.—The honey market is nominal, with little or no good comb honey of any kind. Extracted is more plentiful, especially buckwheat, which sells at 7½ to 8; but one would have to make some concessions to move round lots. Beeswax, 30 to 32. Albany, N. Y., Dec. 21. **H. R. WRIGHT.**

ZANESVILLE.—The honey demand is light, as is usual about the holiday time. Best grades of white comb are selling in single-case lots at 20 cts.; white extracted in five-gallon cans is quoted at 10 to 11. Beeswax of good quality brings first hand 29 cts. in cash or 31 in exchange for bee-supplies.

Zanesville, O., Dec. 22. **E. W. PEIRCE.**

CHICAGO.—The trade in honey has been quite slow during December, and there will not be much improvement until we get over the holidays. Prices remain nominally the same, with a downward tendency, as buyers find they can depress the market, owing to the fact that there are many scattered lots now being offered. Beeswax is quiet at 31 to 32.

Chicago, Dec. 18. **R. A. BURNETT CO.**

KANSAS CITY.—The demand for honey still continues to be light, and we do not look for a much better demand until after the holidays. January and February are generally good honey months. We quote No. 1 white comb, 24-section cases, \$3.25; No. 2 ditto, \$2.75 to \$3.00; No. 1 amber ditto, \$3.00; No. 2 amber ditto, \$2.50 to \$2.75; extracted white, per lb., 8½ to 9; amber ditto, 8 to 8½. Beeswax, 25 to 28.

C. C. CLEMONS PRODUCE CO.
Kansas City, Dec. 22.

NEW YORK.—Trade is rather quiet just now, as is generally the case just before the holidays. Stocks of comb honey are rather light on account of the short crops, and receipts are of only moderate size, and we do not expect any more large shipments from now on. Prices hold firm at former quotations. While white-clover extracted honey is now scarce, there seems to be an abundant supply of all other grades. We expect to see lower prices from now on. For the present we quote California sage, white, at 9 cts.; light-amber sage, 8; white alfalfa, 8 to 8½; light-amber alfalfa, 7 to 7½; buckwheat, 7 to 7½. Beeswax is quiet at 30.

New York, Dec. 18. **HILDRETH & SEGELKEN.**

Continued on page 5.

HEARD OVER THE FENCE ONE DAY.

Brown.—"I say, Jones, wish you would tell me where you send your **HONEY**, you seem to get such good results."

Jones.—"Sure, glad to. **THE FRED W. MUTH CO., 51 WALNUT ST., CINCINNATI, O.,** gets every pound I raise, and I always receive my money the day the shipments arrive. They buy my **BEESWAX** too. And, by the way, they handle the finest **BEE-SUPPLIES** on the market—Falconer Manufacturing Co.'s make. Write them for a **Catalog**—am sure they will be glad to send you one."

What You Get at **CININNATI**

Some things in addition to service, prompt and satisfactory shipments, and a real desire to please you, that come from the central point of distribution.

Root's Supplies—new and clean, and of the finest quality. New hives, new foundation, new sections—everything fresh from the factory in carload shipments.

Early-order discounts for cash: Three per cent for January; two per cent for February—a worthwhile saving to which you are entitled. Don't fail to get your order in at once.

Saving on freight or express. By buying here, part of the cost of transportation is borne by us. You pay only from Cincinnati. This is quite an item on large orders, and our patrons are coming to appreciate it more and more.

Just bear these facts in mind, and begin the new year right by ordering your season's supplies from

C. H. W. Weber & Co.

\$1.00 per year. When paid in advance: 2 years, \$1.50; 3 years, \$2.00; 5 years, \$3.00.

POSTAGE IS PREPAID by the publishers for all subscriptions in the United States, Hawaiian Islands, Philippine Islands, Guam, Porto Rico, Tutuila, Samoa, Shanghai, Canal Zone, Cuba, and Mexico. Canadian Postage is 30c per year. For all other countries in the Postal Union add 60c per year postage.

CHANGE OF ADDRESS. When a change of address is ordered, both the new and the old must be given. The notice should be sent two weeks before the change is to take effect.

DISCONTINUANCES. We give notice just before expiration, and further notice if the first is not heeded, before discontinuing. Subscribers are urged to renew promptly in order to avoid interruption in receipt of GLEANINGS; or, if unable to make payment at once, to advise us when they can do so, which will be considered as an order to continue. Any one wishing his subscription discontinued should so advise us upon receipt of expiration notice, and he will not be annoyed by further notices.

HOW TO REMIT. Remittances should be made by draft on New York, express-order or money-order, payable to order of The A. I. Root Company, Medina, Ohio. Currency should be sent by registered letter.

AGENTS. Representatives are wanted in every city and town in the country. A liberal commission will be paid to such as engage with us. References required.

FOREIGN SUBSCRIPTION AGENTS.

Foreign subscribers can save time and annoyance by placing their orders for GLEANINGS with any of the following authorized agents, at the prices shown:

CONTAINERS

. . . FOR . . .

Comb and Extracted Honey

We offer this year a very complete line of cartons for comb honey—any size or color, with any desired printing. Bottles, jars, and cans for extracted honey with capacity ranging from that of a tumbler to a barrel. . . Special attention is directed to our assortment of Friction-top Pails and to tin cans of $\frac{1}{2}$, 1, 5 gallon capacity.

Get full information,
prices, and samples.

The A. I. Root Company
Medina, Ohio

Honey Markets, continued from page 2.

CINCINNATI.—The market on comb honey has fallen off somewhat. The only demand is for fancy white, which sells in a retail way at \$4.00; jobbing, \$3.60 to \$3.75, according to quantity. Extra white extracted in 60-lb. cans brings 10 cts.; light amber in 60-lb. cans, 8½; amber in barrels, 7 to 7½. Beeswax is in fair demand at \$33.00 per 100 lbs. The above are selling prices, not what we are paying.

C. H. W. WEBER & CO.

Cincinnati, Ohio, Dec. 19.

SCHENECTADY.—A very unsatisfactory condition in comb prevails here, as most of our stock is of very inferior quality, more or less candied, and prices range accordingly, no fair offer being refused. This is unfortunate, as fancy white-clover honey is an attractive feature in dealers' stores during the holiday season. There is only a moderate demand for light and dark extracted, but we expect an improvement in the latter after Jan. 1. No change in prices.

Schenectady, Dec. 18. CHAS. MACCULLOCH.

ST. LOUIS.—Since ours of Dec. 4 our honey market has not changed in values. The demand, however, has decreased considerably, and the prices we quote are more or less nominal—namely, fancy white comb honey, 17 to 18; No. 1, 16; light amber, 15 to 16; dark amber, 12 to 13. Darker grades are not wanted at any price, but are nominal at 9 to 11. Broken and leaking honey is almost unsalable—nominal at 6 to 8. Extracted honey, white clover, 9½; white alfalfa, 9 to 9½; light amber, Southern, 8 8½, all in five-gallon cans; light-amber California, in five-gallon cans, 9; Southern, in barrels and half-barrels, 7 to 7½ for light amber; dark, 6 to 6½. Beeswax, prime, 30; impure and inferior, less.

R. HARTMANN PRODUCE CO.

St. Louis, Mo., Dec. 19.

THE NATIONAL BEE - KEEPERS' ASSOCIATION

OBJECTS

1. To promote the interests of bee-keepers.
2. To protect and defend its members in their lawful rights as to keeping bees.
3. To enforce laws against adulteration of honey.

MEMBERSHIP DUES

One dollar a year.

OFFICERS AND EXECUTIVE COMMITTEE

PRESIDENT.—George W. York, Chicago, Ill.
VICE-PRESIDENT.—W. D. Wright, Altamont, N. Y.
SECRETARY.—E. B. Tyrrell, Detroit, Mich.
TREASURER AND GENERAL MANAGER.—Newell E. France, Platteville, Wis.

Are you a member? If not, why not send the annual dues (\$1.00) at once to Treasurer France? Every progressive bee-keeper should be a member of this, the greatest bee-keepers' organization in North America.

APIARIAN SUPPLIES AND BEES.

Before placing your order let us quote you on what you need. A very liberal discount on early orders. Catalogue free. New York State amber honey 8½ cents per lb.

CHAS. ISRAEL & BROS.

488-490 Canal Street, NEW YORK

Wholesale Dealers and Commission Merchants in

Honey, Beeswax, Maple Sugar and Syrup, etc.

Consignments solicited. Established 1875.

INDIANAPOLIS.—Demand is good for best grades of comb and extracted honey. White comb sells for 18 cts. in ten-case lots, finding ready sale. Amber grades are in slow demand at much lower prices. Best extracted sells at 11 to 12 in five-gallon cans. Beeswax is in good demand, and producers are being paid 31 cts. per lb.

Indianapolis, Dec. 18. WALTER S. POWDER.

CINCINNATI.—The demand for honey is rather good, considering the great quantity that is still in the West unsold. We continue to sell fancy comb honey at \$3.75 to \$4.00 a case; fancy extracted honey brings 9 to 11 cts., according to the quantity and quality purchased; while for amber extracted honey in barrels we are getting 6½ to 7½. We are paying 30 cts. per lb. for choice bright yellow beeswax, absolutely free from dirt, delivered here.

Cincinnati, Dec. 18. THE FRED W. MUTH CO.

LIVERPOOL.—Since our last report there have been no sales of Chilean honey, owing to a want of stock. However, there were sales of Haitian that sold at very satisfactory prices, and we anticipate a good demand next month. The dark sold at \$6.24, while amber sold at \$6.72. Of Jamaica, some 60 packages have been sold at \$6.72 to \$7.68. Arrivals of white and fine white California honey mostly go against contract at \$9.60 and \$10.32, C. I. T. respectively. A small quantity unsold has been quoted at \$10.44 to \$10.92 per quay. Nominal quotations of other qualities are as follows: Haitian, \$5.75 to \$7.20; Chilean, \$6.00 to \$8.40; Jamaican, \$6.24 to \$7.68; Peruvian, \$3.84 to \$4.80; Californian, \$9.60 to \$10.92. We have had a good demand for beeswax. About 80 bags of Chilean were sold at \$35.00 to \$39.92. Stocks will be none too ample for the spring trade. Other qualities are nominally worth as follows: African, \$32.57 to \$34.48; American, \$37.51; West Indian, \$27.80 to \$36.25.

FIRST LESSONS IN BEE-KEEPING

Just the bee-book for beginners. All about bee-keeping and producing the finest honey. It has nearly 200 pages and over 150 illustrations. Revised by Dadant, one of the highest authorities on bees in both America and Europe. Most unique and original cover, showing honey-comb, etc. Sent by mail for 50 cents; or with the *American Bee Journal* for one year—both for only \$1.00—the price of the *Journal alone*, which is now over 50 years old. It is an authority on bees, and the most successful honey-producers write for it every month. It has a department for Women, and also Answers Questions for beginners.

Send 2-cent stamp for sample copy; or, better send \$1.00 today and get both book and *Journal* for one year. Address,

George W. York & Co., 117 N. Jefferson St., Chicago, Ill.

"Griggs the King-Bee."

Are You a Locomotive or a Caboose?

These startling words greeted me from a piece of advertising matter that recently came to my desk. It suggested a train of thought.

There are two kinds of bee-keepers—**locomotives** and **caboosees**. The locomotive bee-keeper is always ahead. He informs himself. He has the A B C and X Y Z of Bee Culture. He takes GLEANINGS IN BEE CULTURE. He supplements the knowledge thus acquired with actual painstaking work among the bees. He masters the details, with the result that he always gets honey—and money. He does not wait until he has a swarm hanging on a tree before he orders hives, nor until the honey-flow has actually begun before securing sections and foundation. He does not buy cheap, inferior supplies and then lose half his crop waiting for them to come. He saves on the cost of his supplies by sending his order to **Peirce** for ROOT'S GOODS during the fall and winter, thus getting the early-order discount.

The other kind of bee-keeper is a **caboose**. Which are You?

December discount, 4 per cent. Catalog for the asking.

EDMUND W. PEIRCE

136 West Main St.,

ZANESVILLE, O.

This Model Outfit

for Beginners in Bee-keeping Costs Only **\$30**

Here is an illustration of a complete outfit for the man or woman who wants to make a start in bee-keeping in a small way. With every thing first-class, and ready for immediate use, and with bees of purest Italian strain (which are included), this outfit will afford a fine opportunity to study the work of these interesting little pets, and prepare for broader developments. No reason at all why this single colony should not provide an extra swarm for the empty hive the very first season, and under right conditions there will be a nice honey-harvest, too. Many people have wanted to keep bees, but have never made a start because of lack of facilities for protecting the hives sufficiently to winter the bees safely out of doors where the winters are severe. The double-walled hives suggested in this outfit are adapted for outdoor wintering, relieving the bee-keeper of the work of preparing the hives for winter; and for those who want to keep bees for pleasure as well as profit, we recommend this outfit most highly. Following is a list of articles included in the above outfit, numbered to correspond:

1—Full Colony of Bees in Ten-frame Double-walled Buckeye Hive, Complete with 28 Sections	\$14.50
Tested Italian Queen for Above	3.00
2—Empty Hive Complete for Hiving New Swarm	5.95
2A—2 Extra Comb-honey Supers	2.10
3—One Year's Subscription to Gleanings in Bee Culture (large semi-monthly, illustrated)	1.00
4—Standard Root Smoker	.85
5—A B C of Bee Culture	1.50
6—Pair of Bee-gloves	.50
7—No. 2 Bee-veil	.60

No. 8 shows two brood-frames with full sheets of foundation from which the bees build honey-comb. There are ten such frames in each of the hives. No. 9 is a super-cover. No. 10 is a tray which is filled with chaff or other packing material to afford protection in winter. No. 11 is the hive-cover or roof which telescopes the hive-body as shown in No. 1.

Special Offer (Delivered at any express office in U. S. east of Mississippi River and north of Ohio River) **\$30.00**

For delivery to points outside of the above free limit, we will make terms on application.

The investment here is a little more than for some of the other outfits we furnish; but if you expect to keep a few bees only, just for recreation or to make enough money for your own table, you will not need to make any further purchases for some time, except a few extra sections the second season. We take special pains to put up these outfits in such fine shape that the bees are sure to reach destination in prime condition. In these hives the bees will almost take care of themselves, summer and winter.

Gleanings in Bee Culture

The close alliance of these two industries makes this a profitable medium for poultry advertisers.

The single-insertion rate is 25 cents per line of about seven words, but there are liberal discounts for regular advertisers, as explained in a new booklet—"WHY Gleanings in Bee Culture Pays People who Advertise Poultry, and WHAT it Costs to Reach its Readers." Ask for this booklet—it is free.

The Best Poultry-Book!

EVERY few days the friends write me, asking what poultry-book they had better purchase—which one I would recommend above all others, etc. Well, to get right down to it there is no *best* poultry-book. There are many good ones, but no one book contains *all* this good. The one that is most emphatic against humbugs and frauds, especially costly medicines for dosing chickens, etc., is the one I have frequently referred to, "The Dollar Hen." Now, while this is an excellent book—one of the very best ever published, perhaps—there are many valuable things to be found in other books that this book hardly touches on. As we have been offering it at a low price, clubbed with GLEANINGS, we have been several times out of stock, and at one time we thought we could not get any more, and so it was taken out of our book-list. We have now a good supply, however, and can furnish you the book for \$1.00 postpaid. But if you renew your subscription to GLEANINGS at the same time, we will furnish the book and GLEANINGS for \$1.50.—A. I. ROOT.

How to MAKE Money Raising Poultry, and Not how to Lose It

"The Dollar Hen" is not a boom poultry-book. It tells as much about what NOT TO DO as what TO DO. It thoroughly discusses every phase of the poultry business and tells how money can be made or may be lost. It gives a full account of all methods and systems of poultry-raising, as taught by private individuals. Mr. Hastings does not advocate complicated and expensive methods; in fact, he found such to be universal money-losers.

As a Government Expert

As a Government expert, Mr. Hastings investigated all the various private systems, patent feeds, and so-called poultry secrets. He visited the great successful poultry-farming districts of Petaluma, Little Compton, Watertown, the South Shore, and other regions—some wholly unknown to the poultry press—and gathered from all these sources the best ideas and most profitable practices. From his long practical experience on farm, poultry-plant, with State Experiment Station work, and Federal service, and with his unprecedented opportunity to get at the actual facts of the poultry industry, Mr. Hastings has laid out a typical money-making poultry-plant, called THE DOLLAR-HEN FARM, and has described the various necessary adaptations for different localities and conditions.

THE DOLLAR HEN

is a real book, substantially bound—not a paper-bound pamphlet of "System," "Secrets," or "Methods," but a book worth several dollars of any poultryman's money. "The Dollar Hen" as a vast fund of valuable information that required much time, expense, and effort. And think of it! You can have this authoritative and complete guide to profitable poultry, postpaid, for only \$1.00.

In connection with a year's subscription to "Gleanings in Bee Culture," we make a special combination price of \$1.50. A two-dollar value for \$1.50. . . . **Take This Combination**

Extra postage on "Gleanings in Bee Culture" to foreign countries, 60 cts.; to Canada, 30 cts.

"The Dollar Hen" Tells About—

A practical car for busy bee-keepers

Here's just the car you want for those quick business trips—and to get the most enjoyment out of the hour or so that you and your family may have after the work for the day is done.

The Cartercar is most reliable because of the extremely simple and strong construction. No matter whether rain or shine it is always ready for the word "Go."

When you are in a hurry the Cartercar can be depended on to get you to your destination in double quick time. If it's just pleasure you seek, the car rolls along easily and noiselessly.

The friction transmission of the Cartercar makes it the most reliable yet the most enjoyable of all automobiles. This transmission is so simple that it does

not get out of order—and it eliminates all jerks and jars in starting.

There are any number of speeds at your command. All are easily and noiselessly controlled by one lever. The farther forward the lever is pushed the faster the speed. When the lever is pulled back the speed is reversed.

The chain-in-oil drive is noiseless. The case is dust and grit tight and permits the chain to operate in oil, thus eliminating almost all wear on the chain.

The bee-keeper who drives a Cartercar has more time—can do more work—make more money—and knows the real joy of living.

Let us send you valuable information concerning these excellent automobiles.

Cartercar Company

Pontiac, Michigan

The APPCO Paper Hen

"A Fireless Brooder With Everything but the Cluck."

YARD AND HOVER.

Inside of Hover.

Made of Waterproofed Corrugated Paper.

The cellular construction is like quills. Strong, light, heat and cold proof. A child can pick it up and carry it in the house. Set on the porch in daytime, in the parlor at night.

Two Parts--Hen and Yard

The Paper Hen is an ingenious arrangement after the tassel idea of wool felt suspended in strips. It is self-adjustable to any size or any number of chicks.

The Paper Hen is enclosed in a cellular house or shell that by special vents can be regulated to any temperature. The Hen or Hover and its construction is heat-retaining and is not affected by sudden changes.

A 100-Chick Yard

While the Hen is called a 50 chick capacity, many have used for 75 chicks, and the yard easily cares for 100 chicks. The size of yard is 42 inches long, 18 inches

wide by 9 inches high. By lowering one end you have a chute to gather up chicks.

Never Smothers--It CAN'T

No drafts or cold air can reach the chicks when under the Hen. Yet because of the cellular construction a steady supply of fresh air is provided. After seeing its motherly principle your mind will be at rest. You know your chicks are all right. House chicks are no trouble and the Paper Hen is so clean that you can set it in the parlor. Hen and yard weighs 7 pounds and is shipped flat or knock down.

For prices and full description of not only the Paper Hen but Appco Egg Boxes, Fowl Shipsafes, Chick Shipsafes and other paper specialties--write for our "Poultry Bulletin."

Order an Appco Paper Hen now and you will know what to buy when the season comes. You can't afford to lose chicks after going to the trouble and expense of hatching them. **PRICE \$2.00.**

AMERICAN PAPER PRODUCTS CO., 202 Bremen Ave., St. Louis, Mo.

MAKE YOUR HENS LAY

You can double your egg yield by feeding fresh-cut, raw bone. It contains over four times as much egg-making material as grain, and takes the place of bugs and worms in fowls' diet. That's why it gives more eggs—greater fertility, stronger chicks, larger fowls.

MANN'S Latest-model BONE-CUTTER

cuts easily and rapidly all large and small bones with adhering meat and gristle. Automatically adapts to your strength. **10 Days' Free Trial.** No money down. Send for our free books to-day.

PAINT WITHOUT OIL

Remarkable Discovery that Cuts Down the Cost of Paint Seventy-five Per Cent.

A Free Trial Package is Mailed to Every One Who Writes.

A. L. Rice, a prominent manufacturer of Adams, N. Y., has discovered a process of making a new kind of paint without the use of oil. He calls it Powderpaint. It comes in the form of a dry powder and all that is required is cold water to make a paint weather-proof, fire-proof, and as durable as oil paint. It adheres to any surface, wood, stone, or brick, spreads and looks like oil paint, and costs about one-fourth as much.

Write to Mr. A. L. Rice, Manufacturer, 8 North St., Adams, N. Y., and he will send you a free trial package, also color-card and full information showing you how you can save a good many dollars. Write to-day.

TRAPPERS GET BUSY BIG MONEY IN FURS

Over ten million dollars will be paid to trappers of fur bearing animals during the coming winter. Any man or boy living in the country can add a goodly sum to his earnings by trapping during spare moments. We furnish ABSOLUTELY FREE a complete Trapper's Guide which tells you the size of trap and kind of bait to use for the different animals, how to remove the skins and prepare them for market. We also furnish the best traps and baits at lowest prices. We receive more furs direct from trapping grounds than any other house in the world, therefore can pay the highest prices for them. Our price lists, shipping tags, etc., are also FREE for the asking. If you are a trapper or want to become one, write to us today. We will help you.

Olds' Red River Valley Seed Potatoes

Red River Six Weeks Best extra early variety for the market gardener. Makes a quick growth, ripens evenly, produces well. Our Red River grown Six Weeks this year are fancy stock. Smoothest and handsomest in years.	Red River Early Ohio Early Ohio is the most popular early in the country. Olds' Red River Ohios are unsurpassed for purity, smoothness, fine appearance and strong vitality. We sell thousands of bushels every year. Get our prices.	Red River White Ohio Similar to Red Early Ohio except in color, which is a fine white, or nearly so. Just as early, just as good in quality and very productive. 557 bushels have been grown on one acre.	Red River Irish Cobbler Irish Cobbler is the successor to Bliss' Triumph and is fast superseding it as an extra early market variety. It outyields Triumph, looks better and eats better. Our Red River grown seed is the best obtainable.
---	--	--	--

Red River Seed Potatoes, grown in the cold northwest, are ahead of all others for quick early maturity, vigorous growth and great productiveness. Better than ever this year.

Olds' Seed Potatoes have a national reputation, 24 years' experience growing and handling; our potatoes are known in every section and we are acknowledged headquarters for pure seed.

Send Postal for 88 Page Catalog giving correct descriptions and true illustrations of the best in Seed Potatoes, Corn, Oats, Barley, Field Seeds, Garden Seeds, Poultry Supplies and Tools.

Convention Notices.

I give you herewith the preliminary announcements of the annual conventions of the nurserymen, fruit-growers, and bee-keepers of this State.

The State Horticultural Society will meet at Nashville, January 25, 1912. Secretary and Treasurer, C. A. Keffer, Knoxville.

The State Nurserymen's Association will meet at Nashville, January 26, 1912. Secretary and Treasurer, C. M. Bentley, Knoxville.

The State Bee-keepers will meet at Nashville, January 27, 1912. Secretary and Treasurer, J. M. Buchanan, Franklin.

C. M. BENTLEY,

AN OPPORTUNITY FOR OKLAHOMA BEE-KEEPERS.

Those who are interested in bee-keeping in Oklahoma are not availing themselves of all their opportunities by any means. Those engaged in stock-raising, dairying, corn and cotton raising, etc., are constantly seeking and receiving information and advice from the Experiment Station at Stillwater, Okla.

Many who have taken up the keeping of bees during the last few years have met with success, and in particularly favored localities the results have frequently been an astonishing success. As a consequence many are being attracted to the busy bee as a pleasant and profitable avocation, and many are seeking information and advice.

There are many problems that are of particular importance to the bee-keepers of Oklahoma that have never as yet been worked out. It seems to have occurred to but few that it is within the province of the Experiment Station to take up these problems and work them out to a known conclusion.

Economical administration requires that only such work be taken up at the station as there is a demand for, or for which there is a necessity. There have been a few colonies of bees at the station for some years; but as there has been no experimentation authorized with them, we are none the wiser for their being there.

The relation of the honey-bee in Oklahoma to the growing of alfalfa seed is a very important matter, and its correct solution may mean thousands of

dollars to the alfalfa-growers. Those who may be called pioneers in the bee industry in this State have organized an association to assist in such work as this, but many bee-keepers are tardy in taking advantage of the opportunities offered.

This association meets at Stillwater, Okla., Jan. 17 and 18, 1912. Come, and let the station and the association know that you expect something from them.

PROGRAM OF SECOND ANNUAL MEETING, OKLAHOMA BEE-KEEPERS' ASSOCIATION, STILLWATER, OKLA., AT A. AND M. COLLEGE.

WEDNESDAY NIGHT, JAN. 17.

Address, illustrated with moving pictures and lantern slides, Prof. C. E. Sanborn.

THURSDAY, 9:00 A.M.

President's annual address.

Business meeting and election of officers.

1:30 P.M.

How location and pasturage affect successful bee-keeping, J. H. Burrage.

Why we should tie to the association, Geo. H. Coulson.

The use of feeders, G. E. Lemon.

What I think about foul brood, Arthur Rhoads.

Growth of the bee industry in Oklahoma, F. W. Van DeMark.

Question-box and general discussion.

N. FRED GARDINER.

Special Notices

By OUR BUSINESS MANAGER

NEW BOOKLET OF HONEY RECIPES.

Booklet No. 31 of our Bee-keepers' Ten-cent Library, entitled "The Use of Honey in Cooking," is a collection of about 100 tested recipes for making cakes, cookies, breads, etc., in which honey is used. In many ways this is the most complete and interesting honey-recipe book which has ever been prepared for wide distribution. The recipes were collected from bee-keepers and good cooks everywhere, and carefully tested under our personal supervision during the past year. Only those that have given entirely satisfactory results are included in this collection.

By way of illustration, "The Use of Honey in Cooking" has as a front cover a reproduction of a capped comb, and on the five following right-hand pages, opposite descriptive reading-matter, these illustrations appear in order: "The same comb that we show on cover with the cappings shaved off with a sharp knife, exposing the dripping honey in the cells;" "The uncapped combs being lowered into a honey-extractor;" "Honey-extractor in operation, showing how the combs are whirled rapidly and the honey thrown out of the cells by centrifugal force against the inside of the can;" "Drawing off the honey through the gate at the bottom of the extractor;" "The comb after being taken from the extractor, showing the cells are undisturbed and the comb as good as new, and ready to be filled again by the bees." Thus it will be seen that the complete process of the making of extracted honey is pictorially explained. This is a result which has long been sought, to correct the popular impression as to the manufacture of extracted honey by some contrary process.

Under the heading of "Food Value of Honey" an introductory of seven or eight pages appears, with a discussion of the subjects, "What is Honey?" "Different Flavors of Honey;" "Why Use Honey in Cooking?" "Where to Keep Honey;" "Honey Recipes;" "Caution Regarding the Use of Honey in Cooking."

The recipes are set in ten-point type of plain and readable face, and the booklet is printed on paper of very fine quality, with paper cover. There are 64 pages in all. While there will be a great demand for single copies of this booklet from our readers and friends throughout the world at the price of 10 cents per copy, we anticipate a still larger demand from bee-keepers, who will appreciate the advantage of using advertising matter of this high class in their honey-selling campaigns. We have printed copies of "The Use of Honey in Cooking" in

considerable quantities, and the back cover page has been left blank so that the advertisement of the local dealer or honey-distributor may be placed thereon. It is our desire to offer these booklets for sale in quantities, as desired, at the following prices, which include the printing of an advertisement or price list, with name and address upon the back cover. No other address will be given in your booklet.

SECOND-HAND FOUNDATION-MILLS.

We have to offer the following list of foundation-machines which have been used, but are in fair condition. In many cases they will answer as well as a new machine where you have only a moderate output. Send for samples of any mill in the list which may interest you.

No. 0121, 2½x10-inch heavy hex. brood mill. An old-style Dunham machine without cam adjustment; in rather poor condition. Price \$8.00.

No. 0129, 2x10 round cell medium-brood mill, old-style frame, in good condition. Price \$14.00.

No. 0139, 2½x6 hexagonal thin-super mill, in very good condition. Price \$14.00.

No. 0140, 2½x6 hexagonal thin-super mill, in very good condition. Price \$14.00.

No. 0151, 2½x6 hexagonal cell, extra thin-super mill, one bad cell, otherwise in good condition. Price \$12.00.

No. 0152, 2½x6 hexagonal thin-super mill, extra good for regular-width super foundation. Price \$12.00.

No. 0153, 2½x6 hexagonal thin-super mill. No. 0154, ditto. Both in very good condition. Price \$14.00 each.

No. 0155, 2x10 round cell, medium-brood mill in old-style frame; fair condition. Price \$12.00.

No. 0156, 2½x6 extra thin-super mill, fair. Price \$10.00.

No. 0157, 2½x6 thin-super mill, in good condition. Price \$12.00.

No. 0159, 2 x 10 round-cell medium-brood mill in good condition. Price \$15.00.

No. 0160, 2½ x 6 hexagonal thin-super mill in good condition. Price \$12.00.

No. 0161, 2½ x 10 hexagonal light-brood mill in very good condition. Price \$18.00.

No. 0164, 2½ x 6 hexagonal thin-super mill in fair condition. Price \$10.00.

No. 0165, 2½ x 6 hexagonal extra-thin-super mill in fair condition. Price \$11.00.

No. 0166, 2½ x 6 hexagonal thin-super mill in extra good condition. Price \$14.00.

No. 0167, 2½ x 6 hexagonal extra-thin-super mill in fair condition. Price \$11.00.

No. 0168, 2½ x 6 hexagonal thin-super mill in good condition. Price \$12.00.

No. 0169, 2½ x 6 hexagonal extra-thin-super mill in extra good condition. Price \$15.00.

No. 0147, 2½ x 6 thin-super mill in extra good condition. Price \$15.00.

No. 0163, 2½ x 10 light-brood mill in good condition. Price \$17.00.

No. 0170, 2½ x 6 thin-super mill in very good condition. Price \$15.00.

No. 0172, 2½ x 6 thin-super mill in fair condition. Price \$11.00.

No. 0173, 2½ x 6 thin-super mill — defect near end of roll; extra good condition for four-inch foundation. Price \$12.00.

No. 0175, 2½ x 10 light-brood mill in good condition. Price \$16.00.

No. 0176, 2½ x 6 extra thin-super mill in fair condition. Price \$12.00.

No. 0177, 2½ x 10 medium-brood mill in extra good condition. Price \$17.00.

No. 0178, 2½ x 14 medium-brood mill in good condition. Price \$20.00.

No. 0179 2 x 10 medium-brood mill in good condition. Price \$16.00.

COLD-FRAME OR HOT-BED SASH.

GET OUR NEW FREE BOOK: How to Make and Run a Hot-bed

Some years ago we had a call for hot-bed sash and made up a small order. Our wood-working facilities being most complete we found it possible to manufacture sash of first-class quality at a price slightly under that charged elsewhere for an article of similar quality. Orders continued to come in occasionally, and we finally listed cold-frame or hot-bed sash in our catalog. Since then the demand has grown each year.

We make the sash of regular size, 3 ft. 4 in. by 6 ft. for four rows of glass 8 in. wide. Each sash holds 28 panes of glass, size 8 by 10 in. If any prefer larger glass we will furnish sash for three rows of 11-in. glass at the same price. Sash are made of cypress and are almost impervious to decay. Sash are usually shipped from here knocked down at a low rate of freight, and can be put together by anybody, as they are mortised and tenoned in the regular way. They are 1½ in. thick, outside bars about 2½ in. wide, and inside bars about 1½ in. The bars are grooved to slip the glass in place.

Each season we ship sash in carload lots to large seed-houses, and we have complimentary reports on their quality. It is both interesting and profitable work to maintain a hot-bed, and every one who has a garden spot should build a cold-frame. We have prepared a small book entitled "How to Make and Run a Hot-bed," which gives full directions for this work, and tells what crops are most easily grown. Copies are sent free upon request. Prices on sash are as follows:

One sash, in the flat, for sample, without glass, 90 cts.; 5 in the flat, 85 cts. each; 10 in the flat, 80 cts. each; put together, 10 cts. each extra. Glass 8x10, just right for the above, \$2.50 per box of 90 lights; 5 boxes, \$2.30 each; 10 boxes, \$2.20 each. Prices of glass subject to change. Get our list price at time of ordering.

THE A. I. ROOT COMPANY,

Bundle of 5 sash, knocked down and crated for freight shipment.

Medina, Ohio

A Happy and Prosperous New Year

Our Wish to Southwestern Bee-keepers for 1912

MAKE up your mind to save all you can on your next season's supplies. Order from our new and complete stocks and get the benefit of early discount and freight saving. We are here to serve you promptly, efficiently and satisfactorily, and no other supply house in the great southwest is better equipped to meet your every requirement.

ANY BEESWAX TO SPARE?

We need considerable quantities of beeswax to keep our comb-foundation factory going—really require 50,000 pounds between now and May 1st next, and will pay 28 cts. cash or 30 cts in trade, per pound for average clean beeswax delivered in San Antonio. We have the largest and most complete equipment in the Southwest for the manufacture of **Weed New Process** foundation. Our machinery is all new and down to date, and every pound of foundation we sell is guaranteed to be absolutely perfect and will give entire satisfaction.

We Solicit the Patronage of Bee-keepers Everywhere, and Association Orders.

Remember! We are giving early-order discounts for cash, just as you get from the manufacturers we represent. **You save more** by ordering here, for freight to San Antonio has been paid by us.

January early-order discount	3 per cent	February early order discount	2 per cent

Madam, You'll Be Glad To Know Aunt Harriet

Aunt Harriet is a wholesome, sensible, sympathetic woman. She has a heart as big as all outdoors, and a very rare ability for advising and comforting others. She has never read "Three Weeks" and she doesn't know the first thing about Bridge. But she does know a whole lot about running a home successfully, raising children creditably and living with a husband happily. Aunt Harriet writes to three or four million readers every month through the

FARM JOURNAL *Unlike Any Other Paper*

gives them good advice and helps to solve their problems and smooth their troubles. You will be better for knowing her.

Farm Journal holds quite as much of interest for women as for men—whether they live in the city or the country. It's a great home paper—full of valuable hints that make for economy of time and money in the conduct of household affairs. Thoroughly practical, but not a bit dry. Clean to the core, but never preachy. There's much of interest

in it for boys and girls and not a line in it that they shouldn't read. 750,000 homes are sweeter and better for its monthly visits.

Don't judge Farm Journal by any other paper you've ever seen. It is, and always has been, unlike any other paper. To prove this, and to make Aunt Harriet's gentle acquaintance, send a dollar for a five years' subscription, and if at any time you are not satisfied with your bargain, just tell us and we will send back every cent of your dollar not yet used.

FARM JOURNAL, 117 N. Clifton St., Philadelphia

Cleanings in Bee Culture

XL. JANUARY 15, 1912, NO. 2

This Model Outfit

for Beginners in Bee-keeping Costs Only **\$30**

Here is an illustration of a complete outfit for the man or woman who wants to make a start in bee-keeping in a small way. With every thing first-class, and ready for immediate use, and with bees of purest Italian strain (which are included), this outfit will afford a fine opportunity to study the work of these interesting little pets, and prepare for broader developments.

No reason at all why this single colony should not provide an extra swarm for the empty hive the very first season, and under right conditions there will be a nice honey-harvest, too.

Many people have wanted to keep bees, but have never made a start because of lack of facilities for protecting the hives sufficiently to winter the bees safely out of doors where the winters are severe. The double-walled hives suggested in this outfit are adapted for outdoor wintering, relieving the bee-keeper of the work of preparing the hives for winter; and for those who want to keep bees for pleasure as well as profit, we recommend this outfit most highly. Following is a list of articles included in the above outfit, numbered to correspond:

1—Full Colony of Bees in Ten-frame Double-walled Buckeye Hive, Complete with 28 Sections	\$14.50
Tested Italian Queen for Above	3.00
2—Empty Hive Complete for Hiving New Swarm	5.95
2A—2 Extra Comb-honey Supers	2.10
3—One Year's Subscription to Gleanings in Bee Culture (large semi-monthly, illustrated)	1.00
4—Standard Root Smoker	.85
5—A B C of Bee Culture	1.50
6—Pair of Bee-gloves	.50
7—No. 2 Bee-veil	.60

No. 8 shows two brood-frames with full sheets of foundation from which the bees build honey-comb. There are ten such frames in each of the hives. No. 9 is a super-cover. No. 10 is a tray which is filled with chaff or other packing material to afford protection in winter. No. 11 is the hive-cover or roof which telescopes the hive-body as shown in No. 1.

Special Offer { Delivered at any express office in U. S. east of Mississippi River and north of Ohio River **\$30.00**

For delivery to points outside of the above free limit, we will make terms on application.

The investment here is a little more than for some of the other outfits we furnish; but if you expect to keep a few bees only, just for recreation or to make enough money for your own table, you will not need to make any further purchases for some time, except a few extra sections the second season. We take special pains to put up these outfits in such fine shape that the bees are sure to reach destination in prime condition. In these hives the bees will almost take care of themselves, summer and winter.

Bee-Hives Thirty Years Old.

Bee-hives which were made by Mr. Falconer in the early eighties have been in constant use ever since, and are now doing good service in the apiary of one of our foremen. These hives are "**falcon**" double-walled hives, and have withstood for these many years the rigor of the Chautauqua winters. And to-day these thirty-year-old hives are in excellent shape, and good for the battle of as many more winters.

Is it any wonder that Mr. Falconer's hives have been renowned for their good material and good workmanship? It is on this solid foundation of substantial hives and perfect goods that our business has been built.

For nearly forty years we have directed our work along lines of progress in constructing better hives, in perfecting machinery specially adapted for hive manufacture, and, as never before, we are making the most substantial, the best-fitting hive of the clearest lumber ever put on the market.

White-Pine Lumber for 1912 Hives.

We have been fortunate in securing the best white pine for hives which it has been our pleasure to offer to bee-keepers for some years. In 1912 we will start a horde of hives on their journey of thirty to fifty years of useful service.

Do you want to own hives which will give you thirty years' service?

See that you get "**falcon**" hives. A catalog, and prices on your 1912 requirements, will be mailed upon request.

Order Early.

Don't delay this important matter of making up your order immediately. "I don't know how my bees will come out of the winter" is an excuse often given. You, Mr. Late-Orderer, have known instances when you have lost a good many dollars in honey and swarms, and experienced much anxious chasing back and forth to the depot for the "Rush Order." Why not start a bank account in the form of a few extra hives, a few extra sections, and a little extra foundation? It will pay larger interest than any savings bank in the land. Buy this extra stock this year, and always thereafter you will have an emergency big-honey-year extra supply to fall back on.

Why not start out right in 1912? As an inducement for you to be thrifty and beforehand we offer at all "**FALCON**" dealers in January an extra three per cent discount from catalog prices; two per cent in February, the last month this inducement is offered. And, above all, don't forget that, when you buy, you want "thirty-year" hives—you want "**FALCON**" hives, "**FALCON**" foundation made in our plant by our special process for nearly forty years, and other "**FALCON**" quality supplies.

"falcon" Distributors in the United States.

To enable our ever rapidly increasing number of customers in all States to get our supplies quickly with only carload freight rates to pay, we have established distributors in all parts of this country. See January 1st **GLEANINGS** for list.

Hundreds of other dealers in the United States handle "**FALCON**" goods in smaller quantities; still they have a full assortment, and can give your wants prompt attention. If you do not know the name of the dealer in your section, send us a list of your wants for quotation from our nearest location—delivered if you wish—less early-order discount.

Send for a **RED CATALOG**.

Early-order discount at all "**FALCON**" dealers—January, 3 per cent; February, 2 per cent.

W. T. FALCONER MFG. COMPANY,

Where the good bee-hives come from

Factory--Falconer, N. Y.

117 North Jefferson St., Chicago, Ill.

Honey Markets

The prices listed below are intended to represent, as nearly as possible, the average market prices at which honey and beeswax are selling at the time of the report in the city mentioned. Unless otherwise stated, this is the price at which sales are being made by commission merchants or by producers direct to the retail merchant. When sales are made by commission merchants the usual commission (from five to ten per cent), cartage, and freight will be deducted; and in addition there is often a charge for storage by the commission merchant. When sales are made by the producer direct to the retailer, commission and storage, and other charges, are eliminated. Sales made to wholesale houses are usually about ten per cent less than those to retail merchants.

EASTERN GRADING RULES FOR COMB HONEY.

FANCY.—All sections well filled, combs straight, firmly attached to all four sides, the combs unsoiled by travel-stain or otherwise, all the cells sealed except an occasional one, the outside surface of the wood well scraped of propolis.

A No. 1.—All sections well filled except the row of cells next to the wood; combs straight; one-eighth part of comb surface soiled, or the entire surface slightly soiled; the outside surface of the wood well scraped of propolis.

No. 1.—All sections well filled except the row of cells next to the wood; combs comparatively even; one-eighth part of comb surface soiled, or the entire surface slightly soiled.

No. 2.—Three-fourths of the total surface must be filled and sealed.

No. 3.—Must weigh at least half as much as a full-weight section.

In addition to this the honey is to be classified according to color, using the terms white, amber, and dark; that is, there will be "Fancy white," "No. 1 Dark," etc.

NEW COMB-HONEY GRADING-RULES ADOPTED BY THE COLORADO STATE BEE-KEEPERS' ASSOCIATION.

No. 1 WHITE.—Sections to be well filled and evenly capped except the outside row, next to the wood; honey white or slightly amber, comb and cappings white, and not projecting beyond the wood; wood to be well cleaned; cases of separated honey to average 21 pounds net per case of 24 sections, no section in this grade to weigh less than 13½ ounces.

Cases of half-separated honey to average not less than 22 pounds net per case of 24 sections.

Cases of unseparated honey to average not less than 23 pounds net per case of 24 sections.

No. 1 LIGHT AMBER.—Sections to be well filled and evenly capped, except the outside row, next to the wood; honey white or light amber; comb and cappings from white to off color, but not dark; comb not projecting beyond the wood; wood to be well cleaned.

Cases of separated honey to average 21 pounds net per case of 24 sections; no section in this grade to weigh less than 13½ ounces.

Cases of half-separated honey to average not less than 22 pounds net per case of 24 sections.

Cases of unseparated honey to average not less than 23 pounds net per case of 24 sections.

No. 2.—This includes all white honey, and amber honey not included in the above grades; sections to be fairly well filled and capped, no more than 25 un-

capped cells, exclusive of outside row, permitted in this grade, wood to be well cleaned, no section in this grade to weigh less than 12 ounces.

Cases of separated honey to average not less than 19 pounds net.

Cases of half-separated honey to average not less than 20 pounds net per case of 24 sections.

Cases of unseparated honey to average not less than 21 pounds net per case of 24 sections.

15 BOSTON.—We quote fancy white comb at 17 to 18; light amber, 15; amber, 14; fancy white extracted, 10 to 11; light amber, 9 to 10; amber, 9. Beeswax, 30.
Boston, Jan. 1. **BLAKE-LEE CO.**

COLUMBUS.—We quote fancy white comb at 18; No. 1, 17; No. 2, 13. Receipts are very light, and demand good for fancy and No. 1 white comb. The market is very dull on amber and No. 2.
Columbus, Jan. 5. **THE EVANS & TURNER CO.**

SCHENECTADY.—The honey market is very quiet; and while there is no great amount on hand, there is plenty to fill the present demand with the exception of white clover. Extracted is moving slowly, but we expect an improvement before long in dark grades. There is no change in prices.
Schenectady, Jan. 2. **CHAS. MACCULLOCH.**

INDIANAPOLIS.—Demand is good for best grades of comb and extracted honey. White comb sells for 18 cts. in ten-case lots, finding ready sale. Amber grades are in slow demand at much lower prices. Best extracted sells at 11 to 12 in five-gallon cans. Beeswax is in good demand, and producers are being paid 31 cts. per lb.
Indianapolis, Jan. 4. **WALTER S. POWDER.**

CHICAGO.—The sales of honey, both comb and extracted, during December, were fair, but not as large as in November. Stocks here are not especially heavy; and as January is usually a good month in which to sell honey, we expect a fair volume of trade. Prices range from 17 to 18 cts. for fancy comb, and 1 to 5 cts. per lb. less for the amber grades. Extracted brings from 7 to 8 for the amber, and 8 to 9 for the white, according to kind and color. Beeswax is steady at 30 to 32.
Chicago, Jan. 2. **R. A. BURNETT CO.**

LIVERPOOL.—Since our last report there has been a steady retail demand for honey, and Chilian was sold at \$5.28 to \$8.16 per cwt.; fine Californian at \$10.92; Jamaican at \$6.72 to \$7.68. Other qualities are nominally worth as follows: Haitien, \$5.76 to \$7.20; Peruvian, \$3.84 to \$4.80; Chilian, \$5.52 to \$8.16; Jamaican, \$6.24 to \$7.68; Californian, \$9.60 to \$10.92. There is a steady demand for beeswax. Late sales have been, Chilian at \$33.88 to \$38.72 per cwt. Other descriptions are quoted nominally: African, \$32.64 to \$34.48; American, \$37.72; West Indian, \$27.80 to \$36.28.
Liverpool, Dec. 27. **TAYLOR & CO.**

Continued on page 5.

HEARD OVER THE FENCE ONE DAY.

Brown.—"I say, Jones, wish you would tell me where you send your **HONEY**, you seem to get such good results."

Jones.—"Sure, glad to. **THE FRED W. MUTH CO., 51 WALNUT ST., CINCINNATI, O.,** gets every pound I raise, and I always receive my money the day the shipments arrive. They buy my **BEEWAX** too. And, by the way, they handle the finest **BEE-SUPPLIES** on the market—Falconer Manufacturing Co.'s make. Write them for a **Catalog**—am sure they will be glad to send you one."

What you get of Weber at
CININNATI

Some things in addition to service, prompt and satisfactory shipments, and a real desire to please you, that come from the central point of distribution.

Root's Supplies—new and clean, and of the finest quality. New hives, new foundation, new sections—everything fresh from the factory in carload shipments.

Early-order cash discount. Three per cent for January; two per cent for February—a worthwhile saving to which you are entitled. Don't fail to get your order in at once.

Saving on freight or express. By buying here, part of the cost of transportation is borne by us. You pay only from Cincinnati. This is quite an item on large orders, and our patrons are coming to appreciate it more and more.

Be Sure to Ask for our new catalog if you do not receive it soon

Just bear these facts in mind, and begin right by ordering your season's supplies from

\$1.00 per year. When paid in advance: 2 years, \$1.50; 3 years, \$2.00; 5 years, \$3.00.

POSTAGE IS PREPAID by the publishers for all subscriptions in the United States, Hawaiian Islands, Philippine Islands, Guam, Porto Rico, Tutuila, Samoa, Shanghai, Canal Zone, Cuba, and Mexico. Canadian Postage is 30c per year. For all other countries in the Postal Union add 60c per year postage.

CHANGE OF ADDRESS. When a change of address is ordered, both the new and the old must be given. The notice should be sent two weeks before the change is to take effect.

DISCONTINUANCES. We give notice just before expiration, and further notice if the first is not heeded, before discontinuing. Subscribers are urged to renew promptly in order to avoid interruption in receipt of GLEANINGS; or, if unable to make payment at once, to advise us when they can do so, which will be considered as an order to continue. Any one wishing his subscription discontinued should so advise us upon receipt of expiration notice, and he will not be annoyed by further notices.

HOW TO REMIT. Remittances should be made by draft on New York, express-order or money-order, payable to order of The A. I. Root Company, Medina, Ohio. Currency should be sent by registered letter.

AGENTS. Representatives are wanted in every city and town in the country. A liberal commission will be paid to such as engage with us. References required.

FOREIGN SUBSCRIPTION AGENTS.

Foreign subscribers can save time and annoyance by placing their orders for GLEANINGS with any of the following authorized agents, at the prices shown:

We carry an up-to-date
line of

Bee-keepers' Supplies.

At this season of the year we give the usual customary early-order discounts.

If you can figure your wants now to buy early and get the benefit of lowest prices, don't fail to consult us.

We have a line of supplies that are just superb—nothing to fear as to quality. Send for our large catalog. It's free.

Beeswax taken in exchange for supplies or cash.

We are 75 miles west of St. Louis. Shipping facilities good.

JOHN NEBEL & SON SUPPLY CO.,

High Hill, Montg. Co., Mo.

Honey Markets, continued from page 2.

CINCINNATI.—The market on comb has fallen off somewhat, the only demand being for fancy. White is selling in a retail way at \$4.00; to jobbers, at \$3.60 to \$3.75, according to quantity. White extracted, extra, in 60-lb. cans, brings 10 cts.; light-amber ditto, 8%; amber in barrels, 7 to 7½. Beeswax is in fair demand at \$33.00 per 100 lbs. The above are our selling prices, not what we are paying.

C. H. W. WEBER & Co.

Cincinnati, Ohio, Dec. 28.

DENVER.—The demand for honey is now improving, especially comb, and better prices are ruling than before the holidays. Our stock of comb honey is light; and any shipments made to us can be turned soon, if good white stock, free from granulation. We quote prices in a jobbing way, strictly No. 1 white, per case, \$3.60; No. 1 light amber, \$3.35; No. 2, \$3.15. We have a large stock of extracted honey of fine quality on which we are making the following jobbing prices: White extracted, 9; light amber, 8; strained, 6½ to 7½. We pay 26 cts. in cash or 28 in trade for clean yellow beeswax delivered here.

THE COLORADO HONEY-PRODUCERS' ASSO'N,
Denver, Jan. 5. F. Rauchfuss, Manager.

NEW YORK.—The market remains in about the same condition as stated in our last report. Comb honey is well cleaned up, and there is a good demand for choice white stock. Extracted, however, is rather plentiful, and the demand has fallen off considerably during the past four weeks. California white and water-white sage are in better demand than any other grades. Alfalfa, light amber and amber, are rather neglected; and in large quantities prices will have to be shaded in order to make sales. We quote California water-white at 9½ to 10; California white sage, 9; California sage, light amber, 8 to 8½; alfalfa, light amber, 7 to 7½; alfalfa amber, 7; buckwheat and mixed, 6½ to 7. Beeswax is steady at 30 to 31.

New York, Jan. 4. HILDRETH & SEGELKEN.

APIARIAN SUPPLIES AND BEES.

Before placing your order let us quote you on what you need. A very liberal discount on early orders. Catalogue free. New York State amber honey 8½ cents per lb.

CHAS. ISRAEL & BROS.

488-490 Canal Street, NEW YORK

Wholesale Dealers and Commission Merchants in

Honey, Beeswax, Maple Sugar and Syrup, etc.

Consignments solicited. Established 1875.

CHICAGO.—Trade on both comb and extracted honey is still very much neglected, and the demand is quite light. There certainly should be a reaction soon. We quote No. 1 white comb honey, packed in 24-section cases, 16 to 17; No. 2 white and light amber, 14 to 16; medium and dark amber, 2 to 3 cts. less; white extracted, 9 to 10; light amber, 7 to 8. Bright pure beeswax is firm at 30 to 32.

Chicago, Jan. 8.

S. T. FISH & Co.

ZANESVILLE.—The demand for honey, while not brisk, is not far from normal for the season, and the supply seems to balance the demand. Prices are about stationary at 20 cts. for best white comb in single-case lots, and 10½ to 12 for extracted in five-gallon cans. The chief demand at present for extracted is for that in small glass packages. Producers are receiving for good clean beeswax 29 cts. in cash or 31 in exchange for bee-supplies.

Zanesville, O., Jan. 3.

E. W. PEIRCE.

ST. LOUIS.—We have no improvement to report in our honey market. The trade is very slow, and has been for the last month. The prices we quote are all more or less nominal. We quote fancy white comb honey at 17 to 18; No. 1, 15 to 16; light amber, 14 to 15; dark, 10 to 12. Broken and leaking honey sells at much less. Extracted, white clover, brings 8½ to 9; white alfalfa, 8½ to 9; light-amber, Southern, 8 to 8½, all in five-gallon cans. California light-amber honey brings 8½; Southern, in barrels and half-barrels, 7 to 7½ for light amber; dark, 6 to 6½. Beeswax, prime, 30; impure and inferior, less.

Jan. 10.

R. HARTMANN PRODUCE CO.

St. Louis, Mo.

BUFFALO.—The supply of good white-clover comb honey is light, and is selling well at 16 to 17. There is considerable dark and mixed honey around, and moving slowly at 12 to 14. Probably it will soon sell a little lower in order to keep it selling. Extracted honey is in fair supply, and selling slow—white, 8 to 9; dark, 7 to 7½. This time of year is very dull, and we do not expect honey to move well for some time. Shipments at this time of the year are, as rule, undesirable in quality, for bee-men often work off the best grades and send the rest to market to be cleaned up by the commission man.

Buffalo, N. Y., Jan. 9.

W. C. TOWNSEND.

CINCINNATI.—The condition of the honey market reminds one of a ship that is beached and must await the high tide to move it. It is useless to offer any inducements to make sales; and to cut prices would not only be a loss, owing to the small profit, but would ruin the conditions. Nevertheless, we do not overlook opportunities to make sales. For the fancy grades of table honey we are getting from 10 to 11 cts. per lb. in 60-lb. cans; and for amber honey of the better grades from 8 to 9; for the low grades, 6 to 7, according to the quality and quantity purchased. These are our selling prices. Comb honey is moving somewhat slower than for some time back, and we are now getting from \$3.75 to \$4.00 a case. For choice bright yellow beeswax we are paying 30 cts. per lb., delivered here.

Cincinnati, Jan. 8.

"Griggs the King-Bee."

Are You a Locomotive or a Caboose?

These startling words greeted me from a piece of advertising matter that recently came to my desk. It suggested a **train** of thought.

There are two kinds of bee-keepers—**locomotives** and **caboosees**. The locomotive bee-keeper is always ahead. He informs himself. He has the **A B C** and **X Y Z** of Bee Culture. He takes **GLEANINGS IN BEE CULTURE**. He supplements the knowledge thus acquired with actual painstaking work among the bees. He masters the details, with the result that he always gets honey—and money. He does not wait until he has a swarm hanging on a tree before he orders hives, nor until the honey-flow has actually begun before securing sections and foundation. He does not buy cheap, inferior supplies and then lose half his crop waiting for them to come. He saves on the cost of his supplies by sending his order to **Peirce** for **ROOT'S GOODS** during the fall and winter, thus getting the early-order discount.

The other kind of bee-keeper is a **caboose**. Which are You?

January discount, 3 per cent. Catalog for the asking.

GET OUR NEW FREE BOOK: How to Make and Run a Hot-bed

Some years ago we had a call for hot-bed sash and made up a small order. Our wood-working facilities being most complete we found it possible to manufacture sash of first-class quality at a price slightly under that charged elsewhere for an article of similar quality. Orders continued to come in occasionally, and we finally listed cold-frame or hot-bed sash in our catalog. Since then the demand has grown each year.

We make the sash of regular size, 3 ft. 4 in. by 6 ft. for four rows of glass 8 in. wide. Each sash holds 28 panes of glass, size 8 by 10 in. If any prefer larger glass we will furnish sash for three rows of 11-in. glass at the same price. Sash are made of cypress and are almost impervious to decay. Sash are usually shipped from here knocked down at a low rate of freight, and can be put together by anybody, as they are mortised and tenoned in the regular way. They are $1\frac{3}{8}$ in. thick, outside bars about $2\frac{1}{2}$ in. wide, and inside bars about $1\frac{1}{2}$ in. The bars are grooved to slip the glass in place.

Each season we ship sash in carload lots to large seed-houses, and we have complimentary reports on their quality. It is both interesting and profitable work to maintain a hot-bed, and every one who has a garden spot should build a cold-frame. We have prepared a small book entitled "How to

Single sash set up ready to use.

Make and Run a Hot-bed," which gives full directions for this work, and tells what crops are most easily grown. Copies are sent free upon request. Prices on sash are as follows:

One sash, in the flat, for sample, without glass, 90 cts.; 5 in the flat, 85 cts. each; 10 in the flat, 80 cts. each; put together, 10 cts. each extra. Glass 8x10, just right for the above, \$2.50 per box of 90 lights; 5 boxes, \$2.30 each; 10 boxes, \$2.20 each. Prices of glass subject to change. Get our list price at time of ordering.

Bundle of 5 sash, knocked down and crated for freight shipment.

DADANT & SONS, Hamilton, Ill.

"The Corning Egg Farm Book

By Corning Himself."

Not a Dream of Some Would-be Successful Poultryman; No Theoretical Possibilities; But Actual Accomplished Facts.

The Straight-Forward Story of the Building up, in Five and a Half Years, of the Greatest Egg Farm in the World, from a start with only 30 Hens.

The Corning Method developed the Strain of Single Comb White Leghorns *which cannot be surpassed.*

The Corning Egg Farm Book tells in detail everything about this Farm, from the purchase of the acreage, at Bound Brook, N. J., in 1906, right up to date.

FEEDING FOR EGGS

The marvelous discoveries and far-reaching developments in feeding for eggs, which have been made on the Corning Egg Farm during the last two years, can be found only in The Corning Egg Farm Book, because no one has gone into feeding for eggs so thoroughly and so successfully as Corning.

It matters not how successful you may be, the possession of the knowledge you will obtain by studying The Corning Egg Farm Book will enable you to reap a greater profit, year after year, than ever before.

The Corning Method brings success to the man who keeps a few hens, in the back yard, just as surely as to the man who keeps hens by the hundreds or thousands.

**The Corning Egg Farm Has Now
Surpassed \$6.41 Per Hen Per Year**

and The Corning Egg Farm Book by Corning Himself tells how you can do the same.

How to build the Corning Houses, detailed drawings, lists of required materials, with full instructions, are in the Book.

Remember, Corning designed and built all these houses. No builder, architect, or contractor, could give you such plans, as only Corning knows.

The chapter covering the handling of birds on Colony Range will help many a man to put more pullets into his laying house than he has ever done before.

Mortality in raising chicks can be materially lessened by following the instructions laid down in The Corning Egg Farm Book.

This book is a real book, not a cheap paper pamphlet. It is bound in rich blue cloth stamped in gold, with the Corning Strain Utility Cockerel in colors. 216 pages of clear type on fine paper. A Corning Cockerel, painted by one of New York's foremost artists, in life colors, is the Frontispiece. The pictures, 35 in number, were taken by a photographer of reputation. They are half-tones, full page and larger. 39 pen-and-ink drawings cover plans of the buildings, etc.

No one else can offer you the equivalent of The Corning Egg Farm Book at any price, for the pertinent reason that the knowledge given in plain language, understandable and usable by any one, has been thought out, worked out, and perfected by the Cornings. No experiments are left for others. The following of the Corning Method, as told in this Book, means assured success and profit. Price \$1 00, postpaid, to any address.

A practical car for busy bee-keepers

Here's just the car you want for those quick business trips—and to get the most enjoyment out of the hour or so that you and your family may have after the work for the day is done.

The Cartercar is most reliable because of the extremely simple and strong construction. No matter whether rain or shine it is always ready for the word "Go."

When you are in a hurry the Cartercar can be depended on to get you to your destination in double quick time. If it's just pleasure you seek, the car rolls along easily and noiselessly.

The friction transmission of the Cartercar makes it the most reliable yet the most enjoyable of all automobiles. This transmission is so simple that it does

not get out of order—and it eliminates all jerks and jars in starting.

There are any number of speeds at your command. All are easily and noiselessly controlled by one lever. The farther forward the lever is pushed the faster the speed. When the lever is pulled back the speed is reversed.

The chain-in-oil drive is noiseless. The case is dust and grit tight and permits the chain to operate in oil, thus eliminating almost all wear on the chain.

The bee-keeper who drives a Cartercar has more time—can do more work—make more money—and knows the real joy of living.

Let us send you valuable information concerning these excellent automobiles.

Cartercar Company

Pontiac, Michigan

Come to the Six Southern States

Try the Wonderful Columbia Kerosene Engine at our Risk

Test it out on your own place for fifteen days. Give it the hardest engine test you can think of. Compare it with any other engine. If the Columbia doesn't develop more power at less cost, send it back quick. No conditions. We are willing to let you be the judge and jury. Kerosene (common lamp oil) is by far the cheapest fuel today. The price of gasoline is climbing all the time, while kerosene remains the same, and in the right engine, it lasts longer and produces more power per gallon than gasoline. You get ALL the power when you use a Columbia, because it is the right engine. It is the one really simple and perfect kerosene engine. It never bucks when you need it most. It is always on the job.

Write for Particulars of Our Big Special Offer

We are going to double our output for next year. We can do it easily. It is just a matter of getting engine users to test the Columbia for themselves. So we are making a great special money saving offer on Columbia Kerosene Engines. This offer is liable to be withdrawn at any time, so write today for full particulars, for it is a money saver you would hate to miss. Free Book No. 66 full of engine facts you need to know, sent free.

Sizes 2 to 16 H.P.

FOR SALE.—Buckwheat honey in new 60-lb. cans and 160-lb. kegs. C. J. BALDRIDGE, Homestead Farm, Kendaia, N. Y.

FOR SALE.—Light-amber buckwheat extracted honey in 60-lb. cans. Four cans or over, 8 cents. W. D. SOPER, Jackson, Mich.

FOR SALE.—Clover honey in 160-lb. kegs, 9 cents; buckwheat in kegs or 60-lb. cans, 7½. C. B. HOWARD, Romulus, N. Y.

FOR SALE.—10,000 lbs. extra-fine table honey, almost white—\$6.00 per 60-lb. can. G. L. BUCHANAN, Holliday's Cove, W. Va.

FOR SALE.—Clover honey ripened on the hive, in 60-lb. cans; gathered in June, extracted in August. Sample free. J. F. MOORE, Tiffin, Ohio.

FOR SALE.—Water white and light-amber alfalfa and light-amber fall honey, put up in any size packages. First class. DADANT & SONS, Hamilton, Ill.

FOR SALE.—Choice light-amber extracted honey—thick, well ripened, delicious flavor. Price 9 cts. per lb. in new 60-lb. cans. J. P. MOORE, Morgan, Ky.

FOR SALE.—Until further notice, choice extracted honey (a blend of the clovers) at 8½ cts. in lots of 5 cases, or 9 cts. in less quantities. Sample, 10 cents. B. WALKER, 6002 28th St., Cicero, Ill.

FOR SALE.—Thirty 50-lb. pails of buckwheat and clover mixed, nice flavor, 7 cts. per lb., any quantity. Satisfaction, or your money and freight back. F. W. LESSER, East Syracuse, N. Y.

COMB HONEY.—4 x 5 x 1½ sections, gathered from the famous Spanish needie; capped even, and light in color; fine quality, grading No. 1 to fancy; and stored in dry heated room it improves constantly. Price, while it lasts, \$3.00 per case of 20 sections—nine-case crates. Safe delivery guaranteed. Extracted, in 60-lb. cans. Write for prices. Orders filled promptly. F. B. CAVANAGH, Hebron, Ind.

We have on hand 35 cases of two five-gallon cans of Michigan white-clover extracted honey, slightly mixed with raspberry and aster. These two flavors make it a little darker than white honey, and we grade it as light amber. We offer this, while it lasts, at 9 cts. per lb., f. o. b. Medina. This is an exceptionally fine lot, and it will not last very long at this price. In ordering, mention lot No. 99. THE A. I. ROOT CO., Medina, O.

QUIRIN-THE-QUEEN-BREEDER, Bellevue, O.

Convention Notices.

The Washington State Bee-keepers' Association will hold its annual meeting at the court-house, North Yakima, Feb. 7 and 8, 1912. Everybody is invited, whether member or bee-keeper.

JOHN F. MILLER, Sec., Toppensish, Wash.
JESSE W. THORNTON, Pres.

The New York State Bee-keepers' Association will hold its next annual meeting on the 30th and 31st of January, at Syracuse, in the county court-house. Every bee-keeper is invited to be present, for it is going to be a bee-keepers' meeting such as they never attended before.

DR. C. G. SCHAMU, Sec., Liverpool, N. Y.

The South Dakota Bee-keepers' Association will meet at Auditorium, Sioux Falls, S. D., January 18 and 19, 1912. The following is the program.

OPENING SESSION, JANUARY 18, 1:30 P.M.

Song by Rhoda Cary and May Kirk.

Bees on the Farm, by Geo. Wester.

What Size of Section is best for Shipping? W. P. Southworth.

What Size of Hive and Section shall we Adopt? L. A. SYVERUD.

Question-box.

7:30 P.M.

President's Annual Address, R. A. Morgan.

Election of Officers.

Wintering Bees, Rhoda Cary.

Question-box.

JANUARY 19, 9 A.M.

Sweet Clover as a Honey-plant, R. A. Morgan.

Foul-brood Law—is it O. K.? Henry Ginsbach.

Question-box.

L. A. SYVERUD, Secretary.

The thirty-third annual convention of the Wisconsin State Bee-keepers' Association will meet in the Supervisors' room at the court-house, Madison, Wisconsin, February 20 and 21, beginning at 10:00 A.M. Tuesday.

The last convention provided for premiums of \$5, \$3, \$2, and \$1 respectively for the four best papers, each paper to occupy not less than five minutes nor more than ten minutes. This is open to all

members, and all papers must be handed to the secretary not later than the first day of the convention, otherwise they will not be admitted for contest. The main feature of our conventions has always been the question-box, and we want you to come prepared with questions; or if you can not come, send your questions to the secretary, and you will hear of them through the printed proceedings. George W. York, President, and N. E. France, Manager and Treasurer of the National Association, will attend this meeting, and both have promised just what we may expect from them.

Headquarters of the bee-keepers is usually the Simons Hotel—a clean, moderate-priced house. To secure a room it will be necessary to write a week ahead of time, and enclose \$1.00 in your letter.

We invite every member to renew his membership. We invite every bee-keeper to become a member.

Annual dues for the Wisconsin State and National, \$1.00 for both, or you may become a member of the Wisconsin State alone by sending 50 cents to the secretary. Be sure to let us hear from you, together with your questions and paper, and, if possible, attend the convention.

Augusta, Wis., January 1, 1912.

Catalogs Received

The Brown Fence and Wire Co., Cleveland, Ohio, send us a 64-page catalog of woven-wire farm, garden, and poultry fences and gates. "Brown pays the freight." Send for his catalog.

W. N. Scarff, New Carlisle, Ohio, issues a 40-page catalog of fruit and farm seeds. Special \$5.00 offers on stock for planting a model orchard; also same offer for fruit-garden. Read his offer on World's Prize field corn.

A. T. Cook, Hyde Park, N. Y., sends out a large annual catalog of "money-saving seeds" for 1912. A specialty is the Six Weeks potato.

Madary Supply House, 733 Aliso St., Los Angeles, Cal. The first bee-supply catalog to reach our office this year is from California—36 pages, full of descriptions, illustrations, and prices of goods for bee-keepers. Send for it.

W. F. Allen, Salisbury, Md., sends out a 50-page catalog of strawberry-plants and other small fruit. Early shipments when desired. See cover page.

Peter Henderson & Co., 35 Cortlandt St., New York, publish a manual of 200 large pages of every thing for the garden. No gardener should be without this.

Henry A. Dreer, 714 Chestnut St., Philadelphia, Pa.—Dreer's Garden Book, 288 pages, 74th edition—a valuable addition to every gardener's library.

W. Atlee Burpee, Philadelphia, Pa., sends out a catalog of 178 pages, entitled "The Plain Truth About the Best Seeds." Lovers of sweet peas will be especially interested in this catalog.

Chas. Navlet Co., San José, Cal., send out a catalog of 116 pages entitled "1912 Planters' Guide;" a specialty of White American Beauty roses, including nursery stock, seeds, and plants. We imagine our California and other Western readers would be profited by sending for this catalog.

J. Steckler Seed Co., Ltd., New Orleans, La., issue a well-illustrated catalog of 212 pages, including their Almanac and Garden Manual, especially adapted to the Southern States. We think our Southern readers will be particularly interested in this. Not only do they list a well-assorted line of seeds, but they have a good many specialties for the farm and garden.

Our subscribers will confer a favor on us by mentioning *Gleanings in Bee Culture* when sending for catalogs.

Books and Magazines.

STILL TIME TO GET THE COMPANION FOR \$1.75.

The publishers of *The Youth's Companion* announce that they will accept yearly subscriptions at \$1.75 up to the end of March. The new rate of \$2.00 will go into effect promptly on April 1. The large number whose subscriptions run over into the early weeks of the year, as well as those who were unable to send in new subscriptions before January 1, will have this opportunity to get *The Companion* for another fifty-two weeks at the old

price. If you had no other periodical reading for your family, *The Youth's Companion* would be sufficient—sufficient for keen enjoyment by every one, young and old; sufficient to keep you posted on the important news and events of the day; sufficient to give you a mind richly stored with useful knowledge. The new departments have become indispensable features of the paper. The page devoted to the interests of boys in school and college always has an article of expert advice on athletics by some one who speaks with authority, whether it is football, baseball, skating, swimming, or other vigorous pastime. The page for girls suggests useful occupations at home and profitable occupations in the community, without forgetting that girls like to be ornamental as well as useful. And there is the family page, which in the course of a year fills the place of a domestic encyclopedia.

Subscribe now—to-day—while *The Companion* may yet be had for \$1.75.

THE YOUTH'S COMPANION,
144 Berkeley St., Boston, Mass.

Special Notices

By A. I. Root

THE "APPCO PAPER HEN," ETC.

I am glad to see corrugated paper for fireless brooders taking the place of heavy lumber, not only because of the saving in transportation, but the ease with which chicks, brooder, dooryard, and all can be carried indoors when a cold spell comes suddenly. You may recall that I used a market-basket for a brooder because it was so easy to carry the chicks indoors or into the incubator cellar nights, not only to have them out of the cold but to have them safe from rats and other prowlers. Well, this paper hen is much better protection from the cold, and a neat, tidy, and light dooryard goes along with it. See particulars on page 13 of our Jan. 1st issue. I have already examined the "paper hen," and expect to use it for my ducklings as soon as I can get down here in my Florida home.

WATCH THE VOTE ON THIS.

Senator Bourne, of Oregon, has introduced a little bill that will bear watching. Some time next year this bill will be considered more seriously than it is now. But it will be best to remember it all along. It provides:

That . . . no higher postage rate shall be charged for the transmission of mail entirely within the United States . . . than . . . for the transmission of mail partly within and partly without the United States. . . . The Postmaster-General is hereby authorized and required to establish and enforce rules and regulations which will give the people of the United States rights and privileges in the use of the United States mails as liberal as the United States accords to the people of the most favored nation.

It doesn't seem unreasonable, does it, that you should have as good service on your own nation's postal cars and in her own postoffices as that accorded to Japanese, British, Chinese, and Russians? And yet that equality is just what the Bourne bill is required to establish. The farms of the United States would have parcels-post service if farmers were as well treated on our own postal routes as we treat foreigners. It is a shameful thing that the postal service from your door to any foreign country should be better than it is to your nearest city or town. And yet such is the case. We carry parcels for the foreigner, and refuse to do it for our own citizens. Your Congressman and your Senators will have to vote on the Bourne bill, perhaps. Watch, and see how they vote. And may be it would be well to drop each of them a postcard, telling them that you are watching to see what is done.

—*Farm and Fireside*, Dec. 9.

Yea, truly! Why should we not have all we accord foreigners?—A. I. R.

Kind Words From Our Customers.

We have had bees only about three years, but find great pleasure in caring for them. We also think our fruit is much benefited. Incidentally we have enjoyed some fine honey and given many

treats to our friends. GLEANINGS comes next to Holy Writ with my husband. Your poultry notes are a great help to us.

Waterford, Ct.

MRS. FRANK JACQUES.

THE BEES HELP TO PAY THE TUITION, ETC.

I turned to p. 370 (the baby on the squash) again and again, for I love children. How I should like to help you strike out the disease-breeding saloons! Our towns are full of them. I have two boys, the elder of whom is 21 years old. He just finished up four years in college. The bees nearly paid for it all. The other boy is 17, and is ready for the same place. No liquor is allowed to be sold within five miles of this college. The number of students for 1910 and 1911 was 1808.

Cornwall, Pa., June 28.

E. B. KAUFFMAN.

"REJOICE AND BE GLAD."

Bless your heart, Mr. Root, do you know that you are doing a lot of good in helping us along? Your Home talks have some powerful suggestions for every one, and your temperance talk is good too. I am called "the Freak" here in this place because I do not drink liquor nor use tobacco.

It makes my heart glad to see the great temperance movement go on. I claim that any man who patronizes a saloon is a traitor to his family, and a rank insult to them also.

Pine Grove, Cal., July 10.

GEO. PRESTON.

[Thanks for your kind words, my good friend. The next time they call you a "freak" because of your principles, take comfort, remembering what the Master said: "Blessed are ye when men shall revile you, and persecute you, and say all manner of evil against you falsely, for my sake. Rejoice ye in that day, and leap for joy; for, behold, your reward is great in heaven."]

TERRY AND HIS TEACHINGS—A LETTER WRITTEN TO T. B. TERRY.

Dear Mr. Terry:—One year ago this month I noticed the advertisement of your book in GLEANINGS, and renewed my subscription and procured your work. I was in poor health at the time, and not able to follow the usual labor of office work at the age of 59 years. Magnetic and massage treatment were used, but I had given up the use of drugs for a long time previous to this; otherwise I feel quite sure I should not be writing this letter to you at the present time.

I had previously noticed the mention of more water-drinking as conducive to better health, etc., and even made a memorandum in my note-book to put it more in practice; but not until I read your book, stating the fact so forcibly and convincingly to any candid mind did I commence the water-drinking in earnest, and now have done so for a year. I procured as pure water as obtainable here in the city—spring water at 5 cts. per gallon, commencing with one glass the first thing on getting up in the morning; another at 11, and 4 and 10 P.M. Six months later I increased the quantity of water to two glasses at 11, and 4 P.M. as a rule, but I exceeded at times the amount stated. I also took up the meat problem at the same time, but made the change slowly, as you suggested, by eating a less quantity, and more of the grain; entire-wheat bread, baked potatoes, English walnuts, olive oil, lime juice, and much fruit in season. During the last six months I probably have not eaten more than 3 lbs. of flesh of all kinds; and pork, with the exception of bacon I have avoided for years.

My system seems to be abundantly fed. I enjoy a splendid appetite with renewed strength and health, and the enjoyment of life, with only now and then a slight tendency of the old state of existence showing up.

To say that I am more than grateful for the inspiration and help I have received but briefly expresses it. This kind of Christianity (if only the heathen in our own communities could be converted) would do more for the good of all than we can easily imagine.

With very much of our good friend A. I. Root's delicate constitution to look out for, and, like him in the strenuous world of the age from a young man (with rather more of the hustle attached to the business than the ordinary person receives), at times I have to slow down (in order to get steam in the boiler) to get under way again for another period of activity.

Waterbury, Ct., March 10. JOHN K. GOODRICH.

ESTABLISHED 1891.

TOEPPERWEIN & MAYFIELD CO.

(Incorporated)

Cor. Nolan and Cherry Sts.

San Antonio, Texas.

Factory and Warehouse.

To Our Friends and Patrons.

In presenting our claims for a continuance of the generous patronage bestowed upon us during the past year, we beg to submit a few facts concerning the bee industry, which may serve to interest our patrons as well as all those engaged in the business.

Owing to the constantly increasing demand for comb foundation and bee-keepers' supplies, we have again been compelled to enlarge our capacity, install new machinery, and otherwise improve our plant, enabling us to produce 500 pounds of comb foundation per day. This has been made possible through the generous patronage given us during the past year, our sales having aggregated approximately \$80,000.

Although it has been found a difficult matter to secure enough beeswax to supply the demand, we have on hand a much larger stock than we have ever had before. We pay for beeswax, average clean, 28c cash or 30c in trade. We also buy and sell honey at ruling prices. On account of the increasing demand for this product the prices in Texas have been higher than in many other States. Bulk comb honey, in the 5 $\frac{1}{2}$ -inch frames, same as described in our catalogue, page 5, Fig. 540, is produced almost exclusively in Texas. In nearly all parts of this State it is best to use the 10-frame hives. As usual we start out with 15,000 cases of honey-cans, and more to come. While there is a good season in the ground, and horsemint is up over nearly the entire State, we will have an ample supply of honey-cans ready for the use of bee-keepers, and prepared for shipment at any moment.

We also desire to invite the attention of our patrons to the fact that, on account of the enormous increase in the demand for our goods last year, it was impossible for us to fill orders as promptly as we should have done, and for that reason we would urge our customers to place their orders as early as possible, in order to avoid delays. It is our special aim to please, and therefore we would ask that the management be immediately notified of any misunderstanding that may arise, assuring our customers that any mistake or misunderstanding that may occur will be cheerfully and amicably adjusted by us.

Judging from the unusual number of orders received as early as November and December of last year, together with the exceptionally favorable prospects ahead, we anticipate a much greater volume of business than ever before; however that may be, it is always a source of gratification to us to please and satisfy our customers, and to that end we shall do our best.

REMEMBER! We are giving early-order discounts for cash, just as you get from the manufacturers we represent. **YOU SAVE MORE** by ordering here, for freight to San Antonio has been paid by us.

January early-order discount **3 per cent**

February early-order discount **2 per cent**

Wood's Seeds

For 1912.

Our New Descriptive Catalog is fully up-to-date, and tells all about the best

Garden and Farm Seeds.

No Moonshine—Just Plain, Unvarnished, *Cashable* Facts About Poultry Profits

If there ever was a straight-from-the-shoulder statement of facts, you'll find it in JOEL M. FOSTER'S book "THE MILLION EGG FARM."

Mr. Foster owns the famous Rancocas Poultry Farm, and in his book he tells his methods for producing upward of *eleven hundred thousand eggs a year*, and piling up a clean annual profit of close to \$20,000.00.

We *know* that the statements in this book are cold facts—because we proved them before publishing

"The Million Egg Farm"

We have sold many thousand copies of this book, and we *know*, from the actual experiences of those who have read and followed it, that these facts can be profitably applied by *you*—whether you have a dozen hens on a back lot, or number your fowls by the thousands.

Up in Scranton, Pa., a clerk, Robert Liddle by name, read this book, followed its directions, and at last reports was cleaning up \$17.00 a day profit on eggs.

In the light of such experiences, we *know* that farmers need this book. That's why we published it and are trying to put it into the hands of every poultry owner.

To *serve* the farmer is the whole purpose of FARM JOURNAL. To serve him with sound advice regarding every branch of farm work.

To enable him to profit by the labor saving and money-making discoveries of other farmers. To serve the farmer's wife with helpful housekeeping suggestions. To serve the farmer and his entire family with clean, wholesome entertainment.

Upward of four million readers welcome its monthly visits.

You need this paper and *you need* the MILLION EGG FARM book, and you can have

Farm Journal every month for four years and "The Million Egg Farm" at once, postpaid, for only \$1.00.

Do yourself and family the favor of sending in the dollar to-day.

Gordon-Van Tine Co.,

2744 Case St., Davenport, Iowa

"falcon" Foundation.

Sales Doubled in 1912.

This remarkable increase in sale of our special-process foundation can be accounted for only by the fact that our produce gives absolute satisfaction.

PROCESS OF MANUFACTURE.—The very best grades of beeswax, clarified without that acid taste or odor which is so objectionable in some makes, sheeted by our heavy-pressure process, reduced and polished by smooth rolls, allowed ample time to cure, is finally passed through embossed power mills, resulting in that clear, absolutely pure product, **FAMOUS THE WORLD OVER, "falcon" FOUNDATION.** No detail, from the buying of the beeswax to the packing of the product, is slighted. The care and skill in cleansing, the absolute purity from all foreign matter, the enormous pressure in sheeting into continuous belt-like sheets, the transparency and perfectness of the finished product, with the appearance and smell of the hive itself (for it is indeed the product of the bees purified, embossed, and returned for their use), has made a product, **"falcon" FOUNDATION,** which has been chosen by the bees themselves as the acme of foundation. The **"FALCON"** way is our **WAY** developed in thirty years of foundation manufacture.

Quality.

"FALCON" FOUNDATION made by our special methods has won a reputation on account of its perfect cell formation, non-stretching qualities, and the readiness with which bees begin work upon it. Our section foundation is perfectly clear, and with it is produced those pearly-white sections of honey so much admired. Our brood foundation is particularly adapted for full sheets in brood or extracting frames. Its strength eliminates all stretched cells in which drone brood is reared, or elongated cells in which no eggs at all are laid. Use **"FALCON"** FOUNDATION and satisfy your bees.

Samples.

We **GUARANTEE** every sheet equal to samples in every particular. Drop us a card for samples and they will be sent postpaid.

Distributors in The United States.

To enable our ever rapidly increasing number of customers in all States to get **"FALCON"** supplies quickly with only carload freight rates to pay, we have established distributors in all parts of this country.

Georgia—J. J. Wilder, Cordele.

California—John C. Frohlinger, 257-59 Market St., San Francisco.

Missouri—C. C. Clemons Bee Supply Co., 130 Grand Ave., Kansas City.

Ohio—Fred W. Muth Co., 51 Walnut St., Cincinnati.

Illinois—W. T. Falconer Mfg. Co., Branch 117 No. Jefferson St., Chicago.

Pennsylvania—A. M. Applegate, Reynoldsville. J. R. Rambo, Collingdale, suburb of Philadelphia.

New York—Deroy Taylor, Lyons. Hudson Shaver & Sons, Perch River.

W. T. Falconer Mfg. Co., Falconer.

Texas—J. W. Reid, Uvalde.

Massachusetts—Ross Bros. Co., Worcester.

Rhode Island—Cull & Williams Co., 180 Washington St., Providence.

Hundreds of other dealers in the United States handle **"FALCON"** goods in smaller quantities; still they have a full assortment, and can give your wants prompt attention. If you do not know the name of the dealer in your section, send us a list of your wants for quotation from our nearest location—delivered, if you wish—less early-order discount.

Send for a **RED CATALOG.**

February early-order discount at all **"FALCON"** dealers, 2 per cent.

W. T. FALCONER MFG. COMPANY,

Where the good bee-hives come from

Factory—Falconer, N. Y.

117 North Jefferson St., Chicago, Ill.

Honey Markets

The prices listed below are intended to represent, as nearly as possible, the average market prices at which honey and beeswax are selling at the time of the report in the city mentioned. Unless otherwise stated, this is the price at which sales are being made by commission merchants or by producers direct to the retail merchant. When sales are made by commission merchants the usual commission (from five to ten per cent), cartage, and freight will be deducted; and in addition there is often a charge for storage by the commission merchant. When sales are made by the producer direct to the retailer, commission and storage, and other charges, are eliminated. Sales made to wholesale houses are usually about ten per cent less than those to retail merchants.

BOSTON.—We quote fancy white comb at 17 to 18; light amber, 15; amber, 14; fancy white extracted, 10 to 11; light amber, 9 to 10; amber, 9. Beeswax, 30. Boston, Jan. 18. **BLAKE-LEE CO.**

KANSAS CITY.—The supply of both comb and extracted honey is not large, and the demand is not heavy. We quote: No. 1 white comb, 24-section cases, at \$3.25; No. 2 ditto, \$3.00; No. 1 amber ditto, \$3.00; No. 2 ditto, \$2.75; extracted white, per lb., 8½ to 9; amber, 8 to 8½; dark, 5½. Beeswax, 25 to 28. C. C. CLEMONS PRODUCE CO.

Kansas City, Jan. 23.

INDIANAPOLIS.—Demand is good for best grades of comb and extracted honey. White comb sells for 18 cts. in ten-case lots, finding ready sale. Amber grades are in slow demand at much lower prices. Best extracted sells at 11 to 12 in five-gallon cans. Beeswax is in good demand, and producers are being paid 31 cts. per lb.

Indianapolis, Jan. 18.

WALTER S. POWDER.

SCHENECTADY.—There are no new features in the honey market here. The demand is fair, but only in a small way. Dealers do not want to be out of honey, neither do they want much on hand, as the quality is so poor. We note some improvement in demand for dark extracted, and think it will all be cleaned up in a month or so. No change in prices.

Schenectady, Jan. 20.

CHAS. MACCULLOCH.

CINCINNATI.—The market on comb has fallen off somewhat, the only demand being for fancy white, selling in a retail way at \$4.00; to jobbers, at \$3.60 to \$3.75, according to quantity. Extra white extracted, in 60-lb. cans, brings 10 cts.; light-amber ditto, 8½; amber in barrels, 7 to 7½. Beeswax is in fair demand at \$3.00 per 100 lbs. The above are our selling prices, not what we are paying.

C. H. W. WEBER & Co.

Cincinnati, Ohio, Jan. 20.

DENVER.—The demand for honey is now improving, especially comb, and better prices are ruling than before the holidays. Our stock of comb honey is light; and any shipments made to us can be turned soon, if good white stock, free from granulation. We quote prices in a jobbing way, strictly No. 1 white, per case, \$3.60; No. 1 light amber, \$3.35; No. 2, \$3.15. We have a large stock of extracted

honey of fine quality on which we are making the following jobbing prices: White extracted, 9; light amber, 8; strained, 6½ to 7½. We pay 26 cts. in cash or 28 in trade for clean yellow beeswax delivered here.

THE COLORADO HONEY-PRODUCERS' ASSO'N,
Denver, Jan. 20. **F. RAUCHFUSS, Manager.**

ZANESVILLE.—It is too soon after the holidays for much stir in the honey market; and this fact, coupled with excessively cold weather, has rendered the demand almost nil. Prices remain practically as in previous quotations—about 20 cts. wholesale for best grades of white comb, and 10½ to 11 for extracted in five-gallon cans. We quote white only, there being practically no demand for the darker grades. Producers are offered for beeswax 29 cts. in cash or 31 in exchange for bee-supplies.

Zanesville, O., Jan. 17.

E. W. PEIRCE.

ST. LOUIS.—Since ours of Jan. 10 there has been no improvement in our honey market. If any thing, the prices are lower, especially if the goods are forced on the market. We quote fancy white comb honey at 17 cts.; No. 1, 15 to 16; light amber, 13 to 14; dark, 8 to 11. Broken and leaking honey sells at much less. Extracted white clover brings 8½ to 9; alfalfa, 8 to 8½; light-amber Southern, 8 to 8½ in cans, and 7 to 7½ in barrels and half-barrels; California light amber, in cans, 8 to 8½. Beeswax, prime, brings 30 cts.; impure and inferior, less.

R. HARTMANN PRODUCE CO.

Jan. 24.

St. Louis, Mo.

CINCINNATI.—The condition of the honey market reminds one of a ship that is beached and must await the high tide to move it. It is useless to offer any inducements to make sales; and to cut prices would not only be a loss, owing to the small profit, but would ruin the conditions. Nevertheless, we do not overlook opportunities to make sales. For the fancy grades of table honey we are getting from 10 to 11 cts. per lb. in 60-lb. cans; and for amber honey of the better grades from 8 to 9; for the low grades, 6 to 7, according to the quality and quantity purchased. These are our selling prices. Comb honey is moving somewhat slower than for some time back, and we are now getting from \$3.75 to \$4.00 a case. For choice bright yellow beeswax we are paying 30 cts. per lb., delivered here.

Cincinnati, Jan. 19.

THE FRED W. MUTH CO.

NEW YORK.—Comb honey is well cleaned up, and prices are well sustained for what few odd lots are coming in. As to extracted, the market is weakening and prices are gradually declining. Strictly fancy clover, California white and water-white sage hold their own fairly well on account of there not being much stock around. There are large supplies of all other grades, such as alfalfa, amber, light amber, white, etc., and prices show a decided downward tendency; in fact, in large quantities quotation prices will have to be shaded in order to effect sales. We quote alfalfa at 6½ to 7½, according to quality; California white sage, 8½ to 9; water-white, 9½ to 10; white clover, 9 to 10; buckwheat, 6½ to 7. Beeswax is steady at 30 to 31.

New York, Jan. 18.

HILDRETH & SEGELKEN.

HEARD OVER THE FENCE ONE DAY.

Brown.—“I say, Jones, wish you would tell me where you send your **HONEY**, you seem to get such good results.”

Jones.—“Sure, glad to. **THE FRED W. MUTH CO., 51 WALNUT ST., CINCINNATI, O.,** gets every pound I raise, and I always receive my money the day the shipments arrive. They buy my **BEESWAX** too. And, by the way, they handle the finest **BEE-SUPPLIES** on the market—Falconer Manufacturing Co.'s make. Write them for a **Catalog**—am sure they will be glad to send you one.”

What you get of Weber at
CININNATI

Some things in addition to service, prompt and satisfactory shipments, and a real desire to please you, that come from the central point of distribution.

Root's Supplies—new and clean, and of the finest quality. New hives, new foundation, new sections—everything fresh from the factory in carload shipments.

Early-order cash discount. Two per cent for February; one per cent for March—a worthwhile saving to which you are entitled. Don't fail to get your order in at once.

Saving on freight or express. By buying here, part of the cost of transportation is borne by us. You pay only from Cincinnati. This is quite an item on large orders, and our patrons are coming to appreciate it more and more.

Be Sure to Ask for our new catalog, if you do not receive it soon

Just bear these facts in mind, and begin right by ordering your season's supplies from

Doctor, $\frac{3}{4}$ -inch, each, .85; mail, \$1.10.

Conqueror, 3-inch, each, .75; mail, \$1.00.

Little Wonder, 2-inch, each, .50; mail, .65.

Honey-knife, .70; mail, .80.

Manufactured only by

Hives and Horses

A Little Talk on Economy.

No one with any knowledge of horses would be likely to answer an advertisement offering a horse for sale at the low price of twenty-five dollars. There are horses and horses, but good horses are not cheap.

So there are bee-hives and bee-hives, and a hive advertised at a low price is likely to prove, when purchased, a very poor investment.

ROOT bee supplies are admittedly the best, and no other supplies "just as good" can be bought cheaper. Beware of shoddy imitation goods offered at cut prices.

A case in point is that of a Roseville, Ohio, man, who, seeing sections advertised at less than the standard price, ordered some. They proved to be of very poor quality, and many were broken in the process of folding. It was an expensive experiment. He now buys ROOT sections from PEIRCE. The ROOT-PEIRCE combination always means best goods, best service, best treatment.

Write for a free catalog of every thing needed for bees. Order in February and get the benefit of 2 per cent discount from catalog prices. If you will make up and send in a list of what you will probably require, lowest prices will be quoted you by early mail.

BEE-SUPPLY BARGAINS.....

All Exhibition and Sample-room Hives, Extractors, and other Bee Fixtures are being offered at reduced prices in order to make room for new goods. Better write to-day and save from ten to fifteen per cent. **TWO PER CENT SPECIAL DISCOUNT** is allowed on all orders for new stock purchased from us this month for immediate or future shipment, so send list of your requirements if you want to purchase Bee Supplies, the best that are made, at absolutely rock-bottom prices.

Do not forget our Bee-Book, 'How to Make Money in Bees,' which is a complete guide to profitable bee-keeping, tells you how to buy bees, what are the best bees to buy, how to locate the hives—in fact, tells you all that you will need to know to make bees highly profitable as a business or for pleasure.

With this book goes our large, illustrated catalog, sent free of charge.

FRUIT-GROWING AND BEE-KEEPING.

EVERY one interested in bees should also be interested in fruit-growing. **FRUIT-GROWING** is profitable. One grower in the South netted \$35,000 on 100 acres in peaches this season. Another netted \$100,000 on apples. Read the *Southern Fruit Grower*, and learn all about this profitable industry in the South. Contains from 32 to 40 pages per month. Bound to interest you. Price 50 cents per year, but will be sent six months on trial for 15 cents if you mention this paper. Send to-day to
The Southern Fruit Grower, Dept. B. C., Chattanooga, Tenn.

FIRST LESSONS IN BEE-KEEPING

Just the bee-book for beginners. All about bee-keeping and producing the finest honey. It has nearly 200 pages and over 150 illustrations. Revised by Dadant, one of the highest authorities on bees in both America and Europe. Most unique and original cover, showing honey-comb, etc. Sent by mail for 50 cents; or with the *American Bee Journal* for one year—both for only \$1.00—the price of the *Journal alone*, which is now over 50 years old. It is an authority on bees, and the most successful honey-producers write for it every month. It has a department for Women, and also Answers Questions for beginners.

Send 2-cent stamp for sample copy; or, better send \$1.00 today and get both book and *Journal* for one year. Address,

George W. York & Co., 117 N. Jefferson St., Chicago, Ill.

Bee Keeping

is profitable
in the

San Joaquin Valley California

There are ranches devoted exclusively to bee culture, while every farm has a few stands that bring the owner a steady income.

If you know bees and understand their management, you can make money rapidly in this flower-covered land. Fruit and alfalfa, which grow luxuriously in every part of the Valley, furnish the finest bee pastures. The honey made from alfalfa is clear, bright, of good color and has an exceptional flavor. It does not candy and shows little, if any, deterioration through storage. There is a golden opportunity here for the bee man.

Land still is reasonable in price. There are thousands of acres being opened and furnished with water. These new farms are being sold to actual settlers on terms that allow the farmer to pay for his land from the crops. You may pay \$100 to \$150 an acre for your farm — by the time it is clear, say in three or four years, you will have a property that should sell for from \$250 to \$400 an acre and will be paying a big dividend on twice that valuation.

Would you like to participate in this profit? Of course you would.

I have a new book, "The San Joaquin Valley," which tells just what is being done and how you may get a start in this land of long-growing seasons, unusually fertile soil, abundant irrigating waters and a climate that acts like magic.

Write to me to-day — ask for a copy of this book — read it, and then, if possible go and see for yourself.

You may call on this department for any information you may require. Just address

C. L. Seagraves, General Colonization Agent,
A. T. & S. F. Ry.
2320 Railway Exchange, Chicago.

Please send me your new San Joaquin Valley booklet.

Sharpen your tools 30 days Free
on this new, shaft-drive
LUTHER "HUMMER"

Tool Grinder

Foot and Engine Power

Does the toughest job of grinding easily in a few minutes—your tools will be always sharp, making work go faster and easier. You can prove by actual use of this machine for 30 days' Free Trial. If you are not satisfied that it saves money, time, and tools, send it back at my expense. Built all of steel and iron—no chains—shaft drive like automobile—dust-proof ball bearings—gravity lubrication—5 years guarantee—runs 4000 revolutions by foot power—easy as sewing machine—absolutely revolutionizes tool sharpening.

**Return
this
Coupon**

14 Machines in One

Farm outfit, and Mechanic's outfit each include 14 attachments and accessories providing for every grinding or sharpening need for farmers, carpenters, mechanics, shops, etc. Tool rests and attachments enable 14-year-old boy to do difficult sharpening such as twist drills, gumming saws, grinding discs, sickles, etc.

Extra Attachments

With the extra attachments the "Hummer" can be used as a turning lathe, force-feed drill, jig and circle saw, blacksmith forge—16 extra attachments in all which equip your shop at low cost. If you bought machines to do the work these attachments do, the cost would be many times greater.

**Dimo-Grit—the wheel for steel—25 times faster
than grindstone—10 times more efficient
than emery—will not draw temper**

Dimo-Grit the new artificial diamond abrasive, is a twin product of carborundum. Dimeo-Grit is especially suitable for steel, leaving the smoothest, keenest edge—cuts hardest steel as emery does soft copper. It peels steel away in tiny shavings instead of wearing it away like grindstone or emery wheels—never glazes—no heat developed—no need of hard pressing or water cooling—no danger of drawing temper. South African diamonds could cut steel no quicker—outwears any number of emery wheels and grindstones. Carborundum wheels furnished.

**Return this Coupon for 30
Days' Free Trial Offer**

You do not put yourself under any obligations by returning this coupon. We will send 40-page Free Book reprinting the story of artificial diamond abrasives as printed in McClure's Magazine, and describing the "Hummer" grinder and attachments. Then you can select an outfit for 30 days' absolutely free trial.

The Biggest Gun in the World in Civil War Days

Send
the
Coupon

So the newspapers greeted this 20-inch smooth-bore gun when it appeared in 1864. But it never did much harm, because it was too big to handle—something we have experienced since with big guns. This smooth-bore terror of 1864, with its 1080 pound projectile, wouldn't even dent the armor of a battleship of today. This interesting little detail of the Civil War (like so many thousands of others overlooked in the majesty of the whole drama) is recalled by this photograph, taken by Mathew Brady, martyr photographer—one of the 3800 lost since the war; now recovered and contained in the

Copyright,
1911
Patriot Pub.
Co.

Photographic History of the Civil War 3800 Photographs

The whole ten volumes of the Photographic History of the Civil War are ready. The 3800 photographs, taken by Mathew Brady and others as daring, in the heat of the Civil War, are beautifully reproduced. The modern art of the engraver has brought out each little detail of the long lost negatives. Around the photographs, the new, specially written, vivid text appears. It is a master-work—a triumph of the book-making art.

Open the books. You see the days of '61—the First Minnesota volunteers just enlisted, standing, erect and proud beneath their new flag. You see the hopeful Southern recruits drilling in homespun and "jeans."

John Wanamaker and the Publishers Join Result: A New Book Club Saves You Money

We have co-operated with the Review of Reviews Company, Publishers of the Photographic History, so that you can get all these 3800 pictures in the sumptuous ten volumes with the million-word history for one-third what Mathew Brady would have charged you for one photograph—for what the Government of the United States paid for only three photographs, and you can pay this small sum in small monthly payments. This is a temporary arrangement, so send the coupon today and make sure to be on time.

JOHN WANAMAKER :: New York

A Million Words

You see Grant, grim and determined amid the swirl of staff and soldiers, writing the orders that precipitated the carnage of June 2, 1864.

You see battered Sumter, and the Southerners who had seized it two days before; you see the Union cannon hurling death over the slopes of Antietam; you see McClellan holding his last interview with Lincoln, and Farragut on the Hartford's deck after "Mobile Bay." You see 200,000 men in Blue marching through Washington, and for contrast the smoking ruins of Richmond—the crash of the Confederacy.

You see that mighty war in all its grandeur, and you see it in its intimate details as it never has been shown before. Photographs must tell the truth and you see our war that cost three quarters of a million men as it really was—with all its lessons, its tragedies, its romance and inspiration.

FREE 72-Page Book

Send the coupon at once for our big book of sumptuous specimen pages from the set—containing large reproductions of 24 of these strange photographs. At the same time we will send you—also free—the romantic story of Brady of the taking, loss and rediscovery of the photographs. And we will tell you how to get your set of the Photographic History at the special low Club price and convenient monthly payments.

Read description of Brooder: 140-chick size—hot-water top heat—double walls—equipped with metal safety lamp—wire run way yard with platform—guaranteed to raise more chicks than any other brooder made—price \$4.85.

**Complete Outfit—Incubator and
Brooder Ordered Together only
\$11.50 Freight Paid East of Rockies**

Yet my machines, sold at my low price, have been found the winners. The Winners in 5,000 Hatches—Then Why Pay More? Remember, I don't ask you to take anything on my say so. I give the most liberal Home Test of any maker in the country—1, 2, or 3 months in your own hands to prove everything I claim—to prove that the Belle City is the World's Champion Machine right in YOUR home. If it doesn't prove it, send it back and get all your money—I pay the freight both ways—and we won't quarrel. Remember this: I start you right at small expense—little outlay—you begin to make money right away—and you keep on making it because I couldn't sell so many machines if they didn't work in the hands of inexperienced users everywhere.

You Can Order From This Advertisement If You Wish

Thousands of people have ordered from my ads, thus getting their machines early to make first hatches with when eggs are ready. You know the early poultry brings the highest prices. If you are in a hurry to get your machine don't hesitate to order right from this advertisement—you are absolutely secure in doing so. I will also send "Hatching Facts." This paper knows me to be responsible and I give you all the advantage of my Home Test just the same as if you ordered from my Book. With the machine I send you Hatching Facts and full instructions. Anyway, answer this advertisement and get Hatching Facts, my Big Portfolio—unique, different from any poultry book ever published, and worth having, no matter where you buy or what machine you buy. I'll gladly send it if you'll ask for it.

**JIM ROHAN, Prest. Belle City Incubator Co.
Box 69, Racine, Wis.**

Mr. W. J. Black of Indiana, winner in *Successful Farming's* 1911 Contest with two 100 per cent hatches.

Mrs. M. J. Clifford of Oklahoma, winner in the 1910 *Successful Farming* Contest by hatching 140 chicks from 140 eggs.

World's
Cham-
pion-
ship
Win-
ners

Mrs. Laura J. Clark, of Illinois, was a winner in the *Missouri Valley Farmer and Nebraska Farm Journal* great 1911 contest, hatching 140 chicks from 140 eggs.

Mrs. H. F. Osman, of Ohio, won the Tycoos Cup offered participants in contest of manufacturers of Tycoos Thermometers.

Along with Your Bees Raise Chickens

A GOOD way to *supplement* honey profits is by chicken-raising. The two industries will go well *together*. But go into the poultry business in the *right way*—with the *right tools*—the *right advice*. Let us send you a copy of

Cyphers Company's Poultry Growers' Guide for 1912

—244 pages, 7½x10 inches in size, profusely illustrated—full of helpful, *practical* facts about poultry-raising for profit. There are eight chapters of new and authentic *information* that make this one of the most valuable poultry books ever published. The headings of the chapters are:

- I—How to get twice as many eggs from same number hens
- II—The 200-egg-per-year hen—how to produce her
- III—Large-sized eggs in demand, as well as lots of them
- IV—Mating and feeding of fowls to get fertile eggs
- V—Selection and care of eggs for successful hatching
- VI—Proper care fowls and chicks with least amount work
- VII—How to brood chicks properly at the lowest cost
- VIII—Premium-price table-poultry and how to produce it

You will also get from this book the *full facts* about the newest development of four old-time principle. *Cyphers Company's service*—now a regularly organized and *specialized department* to furnish to all of our customers at frequent intervals, personal-letter help, advice, bulletins, booklets, etc. Read in the book complete particulars of our great \$1,000.00 poultry-growers' cash-prize contest open to every one for the best reports of actual experiences in raising poultry for profit under local conditions. It also pictures and describes the world's standard

Cyphers Incubators and Brooders

and tells why these are by far the largest sellers to people who *know*—why their use is practically *universal* on the world's largest poultry-plants, by leading fanciers, at principal government experiment stations and agricultural colleges. But be sure to send for the book. It is free, and it is most valuable to every one who is thinking of increasing his or her income in an easy and pleasant way. Be sure to write for your copy *now—today!* Address

Phelps

Pays the Postage to You on His Big Book

H. C. Phelps, Pres.

ALL Phelps asks of you is to write a postal for your copy of his own big 1912 book. It's waiting for you, fresh from the printer. He pays the postage. Phelps shows you real buggy values. He knows. And he knows how to make you a judge of strong points and weak spots on any job. The book is the largest and best showroom of exclusive up-to-date styles in America. Shows more than 25 dealers could—but no job lots, or quantity lots, made "cheap" to sell "cheap."

SPLIT HICKORY VEHICLES

Phelps makes you a better buggy than sold by others—highest grade made—and guarantees to save you all middlemen's profits, an average of \$25.00 and up. You can take your choice and test on the road,

any of his big line, 30 days at his risk. Auto-Seat Buggies—Surreys—Carriages—Runabouts—Driving Cars—Spring Wagons, etc.—made-to-order—with any choice of finish, trimmings, upholstery, etc., all of best grade quality of workmanship and materials.

Write a Postal to Phelps Today

Phelps' Book tells you how and why split—(not sawed) triple A grade straight grained hickory in his buggy wheels and running gears has made his buggy sales the largest in America direct from factory at factory prices. Write a postal for the Book Free to—

PAINT WITHOUT OIL

Remarkable Discovery that Cuts Down the Cost of Paint Seventy-five Per Cent.

A Free Trial Package is Mailed to Every One Who Writes.

A. L. Rice, a prominent manufacturer of Adams, N. Y., has discovered a process of making a new kind of paint without the use of oil. He calls it Powderpaint. It comes in the form of a dry powder and all that is required is cold water to make a paint weather-proof, fire-proof, and as durable as oil paint. It adheres to any surface, wood, stone, or brick, spreads and looks like oil paint, and costs about one-fourth as much.

Write to Mr. A. L. Rice, Manufacturer, 8 North St., Adams, N. Y., and he will send you a free trial package, also color-card and full information showing you how you can save a good many dollars. Write to-day.

\$50 TO \$300 SAVED

We are manufacturers, not merchants. Save dealers, jobbers and catalog house profit. 10 or more men in every township can save \$50 to \$300 on my High Grade Standard Gasoline Engines from 1½ to 15 H-P, price direct to you lower than dealers or jobbers pay for similar engines in carload lots for spot cash.

Burpee's Annual for 1912

"The Leading American Seed Catalog"

Is now ready for mailing. The first edition of more than four hundred thousand copies will soon be distributed. As usual it is sent unsolicited only to "Customers of Record." We shall be pleased, however, to mail a copy immediately upon application (a postal card will do) to every one who appreciates QUALITY IN SEEDS.

This SILENT SALESMAN (and we employ no "talking" salesmen to solicit orders) tells the plain truth about The Best Seeds That Can Be Grown. Besides colored plates of Burpee-Specialties, this bright book of 178 pages shows hundreds of the choicest vegetables and most beautiful flowers, illustrated from photographs. It is almost indispensable to all who garden either for pleasure or profit.

The "HOUSE OF BURPEE" is known the world over not only as EXPERTS IN SWEET PEAS but also as SEED SPECIALISTS. No other American firm has ever introduced so many novelties of sterling value,—and no other growers supply seeds annually direct to so many planters. It might be to your interest to read THE BURPEE ANNUAL. It will cost you only one cent for a post-card to send us your address, and you are under no obligation to buy. We never annoy applicants with "follow up" letters!

Shall we mail you a copy? If so, kindly write to-day.

W. ATLEE BURPEE & CO., Burpee Buildings, Philadelphia.

Thomas' Pure-Bred STRAWBERRY PLANTS

Are the best bred, best grown, best dug, best packed plants you can buy at any price, yet they cost no more than "average quality" plants.

Guaranteed free from all plant disease. Every plant guaranteed true to label. Strong, sturdy, well rooted, wonderful yielders. Grown under my personal supervision in a natural strawberry soil and climate. My plants have produced record crops in 40 states of the 46 states in the Union. 21 years of intensive study and experience back of every sale. I will help you select varieties that will give best results in your soil and climate.

**I'm the Strawberry Plant Man
Grow Nothing Else—Have 200 Acres**

The Purity of the SWEET-CLOVER SEED

Sold by The A. I. Root Co. is Attested to by the
U. S. Government

READ THIS LETTER:

Brooksville, Ky., March 13, 1911.

The A. I. Root Co., Medina, Ohio.
Gentlemen:—Some time ago I sent to you for a sample of your white and yellow sweet-clover seed. After receiving the samples I sent them to Washington, D. C. The yellow hulled tested 99.71 per cent of pure seed; the unhulled white tested 99.11 per cent of pure seed. I think that is fine. I inclose you the sample that you sent me, and want you to send me 80 lbs. of the same lot that this sample is out of, or some equally good. Send the seed by freight.

Yours truly, H. A. JETT.

We have a booklet, published for free distribution, which tells THE TRUTH ABOUT SWEET CLOVER. Ask for your copy.

We can now supply fresh new seed of 1911 crop in all but the annual yellow at following

PRICES

In lots of—	1 lb.	10 lb.	25 lb.	100 lb.
Hulled Yellow Annual (<i>Melilotus Indica</i>), lb.	15c	12c	11c	10c
Unhulled Yellow Biennial (<i>Melilotus officinalis</i>),	25c	22c	21c	20c
Hulled White	23c	20c	19c	18c
Unhulled White (<i>Meli-</i> <i>lotus alba</i>) per lb.	16c	14c	13c	12c

The prices are all subject to market changes.

As to the comparative value of the different varieties, we will say that the white, or *Melilotus alba*, is most common, and therefore the best known. The yellow is desirable because it begins blooming usually from two to four weeks earlier than the white. As to the two varieties of yellow, one of the experiment stations has said there was a distinction without a difference.

The A. I. Root Company, Medina, O.

Special Notices

By OUR BUSINESS MANAGER

Our friends in the east will please take notice of the removal of our New York office to new and enlarged quarters at 139 Franklin Street. They are better prepared than ever before to serve their territory promptly, and will be glad to see you when you are in the city.

MAPLE SUGAR AND SYRUP.

Owing to the heavy demand last year for our Ohio rock-maple syrup and sugar we have decided to book orders in advance of the crop at the following prices:

Single one-gallon can or one case of six one-gallon cans, at \$1.25 per gallon.

Two to ten cases of six one-gallon cans to case, at \$1.15 per gallon.

Larger quantities, 75 to 100 gallons, at \$1.10 per gallon.

For a number of years we have not been able to get sufficient quantities of maple sugar to meet the demand. We hope this year to obtain a larger supply. We quote as follows:

1 to 25 lbs. best rock-maple sugar at 15 cts. per lb.

26 to 50 lbs. ditto at 14 cts.

50 to 250 lbs. ditto at 13 cts.

250 to 1000 lbs. ditto at 12 cts.

Our inspection of sugar and syrup as they come in from the producers will be more rigid than ever, as our requirements are based upon U. S. standard regarding the color, flavor, and purity of both sugar and syrup. Let us book your order now, as the first run is considered by all to be the best.

AS THE ADVERTISING DEPARTMENT SEES IT.

What farmer's boy (or farmer either, for that matter) doesn't dread the tedious turning of the old grindstone when tools are to be sharpened? and how many tools are used dull at a considerable loss in efficiency and time because it takes too long to sharpen them the old way! It may seem rather surprising that farmers who are up-to-date in other matters are still using crude methods for this important work, or obliged to send tools of all kinds to town for attention. The fact of the matter is, that until very recently no very successful small machine for all-round sharpening and grinding was on the market; and it is only through the advertising columns of our rural papers that we are becoming acquainted with the improvements.

Did you ever hear of Dimo-Grit? We hadn't until we read a very interesting pamphlet issued by the Luther Grinder Mfg. Co., 107 Stroh Bldg., Milwaukee, Wis. These people are putting out a foot-power machine which has so many useful attachments that it seems to us every farm ought to be supplied with one. The booklet mentioned is worth reading at any rate, and the manufacturer will be glad to send you one on request.

It is surprising how much really interesting and useful matter is put out by advertisers in their booklets and catalogs. It would be a revelation to many to get some of these and read them carefully. Time was when we had to pay anywhere from ten cents to a dollar for information that may be had now for the asking (not that it is any the less valuable, but, on the contrary, it is usually more so), for the manufacturer, having this information on hand, has found that it is good business policy to get it into the hands of a possible buyer with no expense to him. Prospective buyers, and others interested, reap the benefit of this by simply sending a postal-card request, and thereby become pretty well posted on improvements along any certain line in which they may be interested. It will pay our readers to send requests at once for catalogs of such goods as they are likely to need the coming season. Even if purchases are made at local stores when buying time comes, the information found in the catalogs read in the winter evenings will help in coming to a decision as to what line is best suited to make your farm, garden, or apiary yield the biggest returns.

Another example of a catalog which is much more than a price list is the Planet Junior Hand Book, issued by the S. L. Allen Co., Box G, Philadelphia, Pa. No matter whether you are an orchardist, a market-gardener, a cotton-grower, or a farmer raising a great diversity of crops, you will find this

hand-book a mine of useful information on how to make your work and your crops count most and your earnings mount highest.

Convention Notices

The Ohio State Bee-keepers' Association will hold its annual convention on February 21, 1912, at the Commercial Club rooms, Springfield, Ohio. The following is the program:

MORNING SESSION, 10 A.M.

President's address.

Secretary-treasurer's reports.

AFTERNOON SESSION, 1:30 P.M.

Bee Diseases in Ohio, N. E. Shaw, Chief Inspector. Questions of business.

Some recent developments on the wintering question, Editor E. R. Root.

Address by Deputy State Inspector—What has been accomplished by inspection?

Address on sweet clover and forage in and around large cities, Henry Reddert.

Question-box.

Election of Officers.

NIGHT SESSION.

Stereopticon lecture, Bee-keeping in the United States, E. R. Root.

Springfield, O.

A. N. NOBLE, Sec.

PRELIMINARY PROGRAM OF THE MEETING OF APIARY INSPECTORS OF NORTHERN UNITED STATES AND CANADA, AT AMHERST, MASS., FEB. 7 AND 8, 1912.

The Honorable J. Lewis Ellsworth, Secretary of the Massachusetts State Board of Agriculture, will preside.

The meetings will be held at the Entomological Building, Massachusetts Agricultural College Campus.

The purpose of the convention is to bring together those interested in apiary-inspection service in order to discuss the foremost problems which limit the efforts of the inspectors, to the end of raising the standard, increasing the efficiency, promoting uniformity, cooperation, and bee-keeping generally.

The first morning, without a formal session, will be set apart for interviews or for a visit to Amherst College (with a guide), or to the Departments of the Massachusetts Agricultural College.

2:30 P.M., AT ENTOMOLOGICAL BUILDING.

Address of welcome by President Kenyon L. Butterfield, of the Massachusetts Agricultural College. Papers.

Unifications of inspectors' methods, qualifications, and standards.

Cooperation of inspectors: interstate cooperation, Dr. W. E. BRITTON, Entomologist, Connecticut.

History of the advancement of bee-keeping in New York through inspection, CHARLES STEWART, Inspector, New York.

7:30, EVENING SESSION, ENTOMOLOGICAL BUILDING.

Discussion:

The value of requeening or dequeening in European foul brood. Can a general agreement be reached? A. W. YATES, Inspector, Connecticut.

The newly formed Association of Apiary Insp. F. PHILLIPS, Washington, D. C.

The needed control of stray colonies; trees, walls, and ledges.

The box-hive problem. Is not more uniform and rigid control necessary? J. E. CRANE, Inspector, Vermont.

SECOND DAY, 9:30 A.M. ENTOMOLOGICAL BUILDING.

Paper (subject to be announced), Dr. E. F. PHILLIPS, Washington, D. C.

The problem of quarantine stations, MORLEY PETTIT, Canada.

The queen-trade in relation to the spread and suppression of infectious bee diseases, A. C. MILLER, Inspector, Rhode Island.

Inspection records, B. N. GATES, Massachusetts.

Is there some particular subject which you would like discussed or to discuss?

Accommodations:—Amherst House, Prospect House.

Meals may be had also at the college dining-hall upon the Campus. Electric cars to the college.

Inquiries may be addressed to Burton N. Gates, Massachusetts Agricultural College, Amherst, Mass.

(Incorporated)

Cor. Nolan and Cherry Sts.

San Antonio, Texas.

Factory and Warehouse.

To Our Friends and Patrons.

In presenting our claims for a continuance of the generous patronage bestowed upon us during the past year, we beg to submit a few facts concerning the bee industry, which may serve to interest our patrons as well as all those engaged in the business.

Owing to the constantly increasing demand for comb foundation and bee-keepers' supplies, we have again been compelled to enlarge our capacity, install new machinery, and otherwise improve our plant, enabling us to produce 500 pounds of comb foundation per day. This has been made possible through the generous patronage given us during the past year, our sales having aggregated approximately \$80,000.

Although it has been found a difficult matter to secure enough beeswax to supply the demand, we have on hand a much larger stock than we have ever had before. We pay for beeswax, average clean, 28c cash or 30c in trade. We also buy and sell honey at ruling prices. On account of the increasing demand for this product the prices in Texas have been higher than in many other States. Bulk comb honey, in the 5 $\frac{1}{2}$ -inch frames, same as described in our catalogue, page 11, Fig. 540, is produced almost exclusively in Texas. In nearly all parts of this State it is best to use the 10-frame hives. As usual we start out with 15,000 cases of honey-cans, and more to come. While there is a good season in the ground, and horsemint is up over nearly the entire State, we will have an ample supply of honey-cans ready for the use of bee-keepers, and prepared for shipment at any moment.

We also desire to invite the attention of our patrons to the fact that, on account of the enormous increase in the demand for our goods last year, it was impossible for us to fill orders as promptly as we should have done, and for that reason we would urge our customers to place their orders as early as possible, in order to avoid delays. It is our special aim to please, and therefore we would ask that the management be immediately notified of any misunderstanding that may arise, assuring our customers that any mistake or misunderstanding that may occur will be cheerfully and amicably adjusted by us.

Judging from the unusual number of orders received as early as November and December of last year, together with the exceptionally favorable prospects ahead, we anticipate a much greater volume of business than ever before; however that may be, it is always a source of gratification to us to please and satisfy our customers, and to that end we shall do our best.

REMEMBER! We are giving early-order discounts for cash, just as you get from the manufacturers we represent. **YOU SAVE MORE** by ordering here, for freight to San Antonio has been paid by us.

February early-order discount **2 per cent**

March early-order discount **1 per cent**

A practical car for busy bee-keepers

Here's just the car you want for those quick business trips—and to get the most enjoyment out of the hour or so that you and your family may have after the work for the day is done.

The Cartercar is most reliable because of the extremely simple and strong construction. No matter whether rain or shine it is always ready for the word "Go."

When you are in a hurry the Cartercar can be depended on to get you to your destination in double quick time. If it's just pleasure you seek, the car rolls along easily and noiselessly.

The friction transmission of the Cartercar makes it the most reliable yet the most enjoyable of all automobiles. This transmission is so simple that it does

not get out of order—and it eliminates all jerks and jars in starting.

There are any number of speeds at your command. All are easily and noiselessly controlled by one lever. The farther forward the lever is pushed the faster the speed. When the lever is pulled back the speed is reversed.

The chain-in-oil drive is noiseless. The case is dust and grit tight and permits the chain to operate in oil, thus eliminating almost all wear on the chain.

The bee-keeper who drives a Cartercar has more time—can do more work—make more money—and knows the real joy of living.

Let us send you valuable information concerning these excellent automobiles.

Cartercar Company

Pontiac, Michigan

Horse Secrets and Horse Sense

A Liberal Supply of Both for a Dollar

The "Horse Secrets" are told by Dr. A. S. Alexander, the celebrated veterinarian, in a book of that name. This book is the only one in existence which exposes all the tricks that unscrupulous horse dealers and "gyp" traders are up to—such as "shutting a heaver" and "plugging a roarer," the "Bishoping" Trick, the "Widow Dodge" and all the other ways of "fixing" a horse. Saves you from being "stung" by professional dopesters, and gives you the laugh on these slick scamps. Also contains many valuable secrets for feeding and conditioning stock, curing evil habits, etc.

Seven editions of "Horse Secrets"—75,000 copies in all—have been distributed by Farm Journal in the past two years, to the great discomfiture of horse-trading swindlers. We will send out many thousand more this winter.

"Horse sense"—as applied to farming, fruit growing, poultry raising, stock breeding and household economy—is imparted through the pages of Farm Journal.

Edited by men who, most of their lives, have had roosters for alarm clocks and learned farming by making a living at it, there's no flub-dub or hothouse theory in Farm Journal—just sound, practical, common-sense teachings which are coined into cash by those who study and apply them.

If you ever buy, sell, trade or own a horse, you need Horse Secrets, and in whatever branch of farming you are engaged you need Farm Journal. They will save and earn you many dollars—yet

For only \$1.00 we will send you "Horse Secrets," postpaid, at once, and Farm Journal every month for four years.

This is the most liberal combination offer (quality of book and paper considered) ever made. You'll do wisely to take advantage of it today.

If you order promptly, we will send, absolutely free, "Poor Richard Revived"—our splendid new Almanac for 1912.

FARM JOURNAL, 117 N. Clifton St., Philadelphia

Cleanings in Bee Culture

VOL. XL. FEBRUARY 15, 1912, NO. 4

WHY NOT MAKE \$200.⁰⁰ A MONTH - - That's \$50.⁰⁰ a Week, almost \$10.⁰⁰ a Day

Selling Victor Safes and fire-proof boxes to merchants, doctors, lawyers, dentists and well-to-do farmers, all of whom realize the need of a safe, but do not know how easy it is to own one. Salesmen declare our proposition one of the best, clean-cut money-making opportunities ever received. Without previous experience **YOU** can duplicate the success of others. Our handsomely illustrated 200-page catalog will enable you to present the subject to customers in as interesting a manner as though

you were piloting them through our factory. Men appointed as salesmen receive advice and instructions for selling safes, giving convincing talking points which it is impossible for a prospective customer to deny. Why don't **YOU** be the first to apply from your vicinity before someone else gets the territory? We can favor only one salesman out of each locality.

The 25th anniversary of our company was celebrated by erecting the most modern safe factory in the world. **Wide-awake men** who received our special selling inducement, rendered it necessary to double our output. We are spending many thousands of dollars enlarging our sales organization, but to learn all particulars, it will cost you only the price of a postal card.

Our New Home. Capacity 20,000 Safes Annually.

COLD-FRAME OR HOT-BED SASH.

GET OUR NEW FREE BOOK: How to Make and Run a Hot-bed

Single sash set up ready to use.

Make and Run a Hot-bed, which gives full directions for this work, and tells what crops are most easily grown. Copies are sent free upon request. Prices on sash are as follows:

One sash, in the flat, for sample, without glass, 90 cts.; 5 in the flat, 85 cts. each; 10 in the flat, 80 cts. each; put together, 10 cts. each extra. Glass 8x10, just right for the above, \$2.50 per box of 90 lights; 5 boxes, \$2.30 each; 10 boxes, \$2.20 each. Prices of glass subject to change. Get our list price at time of ordering.

Some years ago we had a call for hot-bed sash and made up a small order. Our wood-working facilities being most complete we found it possible to manufacture sash of first-class quality at a price slightly under that charged elsewhere for an article of similar quality. Orders continued to come in occasionally, and we finally listed cold-frame or hot-bed sash in our catalog. Since then the demand has grown each year.

We make the sash of regular size, 3 ft. 4 in. by 6 ft. for four rows of glass 8 in. wide. Each sash holds 28 panes of glass, size 8 by 10 in. If any prefer larger glass we will furnish sash for three rows of 11-in. glass at the same price. Sash are made of cypress and are almost impervious to decay. Sash are usually shipped from here knocked down at a low rate of freight, and can be put together by anybody, as they are mortised and tenoned in the regular way. They are 1½ in. thick, outside bars about 2½ in. wide, and inside bars about 1½ in. The bars are grooved to slip the glass in place.

Each season we ship sash in carload lots to large seed-houses, and we have complimentary reports on their quality. It is both interesting and profitable work to maintain a hot-bed, and every one who has a garden spot should build a cold-frame. We have prepared a small book entitled "How to

Bundle of 5 sash, knocked down and crated for freight shipment.

Factory--Falconer, N. Y.

117 North Jefferson St., Chicago, Ill.

Honey Markets

The prices listed below are intended to represent, as nearly as possible, the average market prices at which honey and beeswax are selling at the time of the report in the city mentioned. Unless otherwise stated, this is the price at which sales are being made by commission merchants or by producers direct to the retail merchant. When sales are made by commission merchants the usual commission (from five to ten per cent), cartage, and freight will be deducted; and in addition there is often a charge for storage by the commission merchant. When sales are made by the producer direct to the retailer, commission and storage, and other charges, are eliminated. Sales made to wholesale houses are usually about ten per cent less than those to retail merchants.

EASTERN GRADING RULES FOR COMB HONEY.

FANCY.—All sections well filled, combs straight, firmly attached to all four sides, the combs unsoiled by travel-stain or otherwise, all the cells sealed except an occasional one, the outside surface of the wood well scraped of propolis.

A No. 1.—All sections well filled except the row of cells next to the wood; combs straight; one-eighth part of comb surface soiled, or the entire surface slightly soiled; the outside surface of the wood well scraped of propolis.

No. 1.—All sections well filled except the row of cells next to the wood; combs comparatively even; one-eighth part of comb surface soiled, or the entire surface slightly soiled.

No. 2.—Three-fourths of the total surface must be filled and sealed.

No. 3.—Must weigh at least half as much as a full-weight section.

In addition to this the honey is to be classified according to color, using the terms white, amber, and dark; that is, there will be "Fancy white," "No. 1 Dark," etc.

NEW COMB-HONEY GRADING-RULES ADOPTED BY THE COLORADO STATE BEE-KEEPERS' ASSOCIATION.

No. 1 WHITE.—Sections to be well filled and evenly capped except the outside row, next to the wood; honey white or slightly amber; comb and cappings white, and not projecting beyond the wood; wood to be well cleaned; cases of separated honey to average 21 pounds net per case of 24 sections, no section in this grade to weigh less than 13½ ounces.

Cases of half-separated honey to average not less than 22 pounds net per case of 24 sections.

Cases of unseparated honey to average not less than 23 pounds net per case of 24 sections.

No. 1 LIGHT AMBER.—Sections to be well filled and evenly capped, except the outside row, next to the wood; honey white or light amber; comb and cappings from white to off color, but not dark; comb not projecting beyond the wood; wood to be well cleaned.

Cases of separated honey to average 21 pounds net per case of 24 sections; no section in this grade to weigh less than 13½ ounces.

Cases of half-separated honey to average not less than 22 pounds net per case of 24 sections.

Cases of unseparated honey to average not less than 23 pounds net per case of 24 sections.

No. 2.—This includes all white honey, and amber honey not included in the above grades; sections to be fairly well filled and capped, no more than 25 un-

capped cells, exclusive of outside row, permitted in this grade, wood to be well cleaned, no section in this grade to weigh less than 12 ounces.

Cases of separated honey to average not less than 19 pounds net.

Cases of half-separated honey to average not less than 20 pounds net per case of 24 sections.

Cases of unseparated honey to average not less than 21 pounds net per case of 24 sections.

BOSTON.—We quote fancy white comb at 17 to 18; light amber, 15; amber, 14; fancy white extracted, 10 to 11; light amber, 9 to 10; amber, 9. Beeswax, 30. Boston, Feb. 2. **BLAKE-LEE CO.**

CHICAGO.—Fancy white comb honey sells at 17 to 18 cts., and is in good demand. Other grades sell at from 1 to 5 cts. per lb. less, according to color, kind, and condition. Extracted is slow of sale, with the white ranging from 8 to 9; amber, 7 to 8. Beeswax is quotable at 30 to 32. Chicago, Feb. 3.

R. A. BURNETT & CO.

INDIANAPOLIS.—Demand is good for best grades of comb and extracted honey. White comb sells for 18 cts. in ten-case lots, finding ready sale. Amber grades are in slow demand at much lower prices. Best extracted sells at 11 to 12 in five-gallon cans. Beeswax is in good demand, and producers are being paid 31 cts. per lb.

Indianapolis, Feb. 2. **WALTER S. POWDER.**

SCHENECTADY.—Our market is bare of desirable comb honey, and there is but little demand. There seems to be a considerable stock of dark and amber extracted still in the hands of producers who are getting anxious to sell; but as buyers are holding off, prices have a downward tendency. Just now 7 cts. is the top price.

Schenectady, Feb. 5.

CHAS. MACCULLOCH.

CINCINNATI.—The market on comb has fallen off somewhat, the only demand being for fancy white, selling in a retail way at \$4.00; to jobbers, at \$3.60 to \$3.75, according to quantity. Extra white extracted, in 60-lb. cans, brings 10 cts.; light-amber ditto, 8½; amber in barrels, 7 to 7½. Beeswax is in fair demand at \$33.00 per 100 lbs. The above are our selling prices, not what we are paying.

Cincinnati, Ohio, Feb. 1. **C. H. W. WEBER & CO.**

ST. LOUIS.—The honey market is unchanged since our last. We quote fancy white comb honey at 17; No. 1, 15 to 16; light amber, 13 to 14; dark, 7 to 10. Broken and leaking honey sells at much less. Extracted white-clover honey is nominal at 8½ to 9; alfalfa, 8 to 8½; Southern light amber, 8 to 8½ in cans; 7 to 7½ in barrels and half-barrels; California light amber in cans, 8 to 8½. There is a good supply of California and Southern amber honey on the market; the same, however, is bare of clover and other varieties of extracted honey. Beeswax is in good demand. We quote prime at 30 cts.; impure and inferior, less.

St. Louis, Mo., Feb. 7. **R. HARTMANN PRODUCE CO.**

Continued on page 5.

HEARD OVER THE FENCE ONE DAY.

Brown.—"I say, Jones, wish you would tell me where you send your **HONEY**, you seem to get such good results."

Jones.—"Sure, glad to. **THE FRED W. MUTH CO., 51 WALNUT ST., CINCINNATI, O.,** gets every pound I raise, and I always receive my money the day the shipments arrive. They buy my **BEESWAX** too. And, by the way, they handle the finest **BEE-SUPPLIES** on the market—Falconer Manufacturing Co.'s make. Write them for a **Catalog**—am sure they will be glad to send you one."

What you get of Weber at
CININNATI

Some things in addition to service, prompt and satisfactory shipments, and a real desire to please you, that come from the central point of distribution.

Root's Supplies—new and clean, and of the finest quality. New hives, new foundation, new sections—everything fresh from the factory in carload shipments.

Early-order cash discount. Two per cent for February; one per cent for March—a worthwhile saving to which you are entitled. Don't fail to get your order in at once.

Saving on freight or express. By buying here, part of the cost of transportation is borne by us. You pay only from Cincinnati. This is quite an item on large orders, and our patrons are coming to appreciate it more and more.

Be Sure to Ask for our new catalog, if you do not receive it soon

Just bear these facts in mind, and begin right by ordering your season's supplies from

C. H. W. Weber & Co.
2146 Central Ave. Cincinnati, Ohio

\$1.00 per year. When paid in advance: 2 years, \$1.50; 3 years, \$2.00; 5 years, \$3.00.

POSTAGE IS PREPAID by the publishers for all subscriptions in the United States, Hawaiian Islands, Philippine Islands, Guam, Porto Rico, Tutuila, Samoa, Shanghai, Canal Zone, Cuba, and Mexico. Canadian Postage is 30c per year. For all other countries in the Postal Union add 60c per year postage.

CHANGE OF ADDRESS. When a change of address is ordered, both the new and the old must be given. The notice should be sent two weeks before the change is to take effect.

DISCONTINUANCES. We give notice just before expiration, and further notice if the first is not heeded, before discontinuing. Subscribers are urged to renew promptly in order to avoid interruption in receipt of GLEANINGS; or, if unable to make payment at once, to advise us when they can do so, which will be considered as an order to continue. Any one wishing his subscription discontinued should so advise us upon receipt of expiration notice, and he will not be annoyed by further notices.

HOW TO REMIT. Remittances should be made by draft on New York, express-order or money-order, payable to order of The A. I. Root Company, Medina, Ohio. Currency should be sent by registered letter.

AGENTS. Representatives are wanted in every city and town in the country. A liberal commission will be paid to such as engage with us. References required.

FOREIGN SUBSCRIPTION AGENTS.

Foreign subscribers can save time and annoyance by placing their orders for GLEANINGS with any of the following authorized agents, at the prices shown:

Established 1885

We carry an up-to-date
line of

Bee-keepers' Supplies.

At this season of the year we give the usual customary early-order discounts.

If you can figure your wants now to buy early and get the benefit of lowest prices, don't fail to consult us.

We have a line of supplies that are just superb—nothing to fear as to quality. Send for our large catalog. It's free.

Beeswax taken in exchange for supplies or cash.

We are 75 miles west of St. Louis. Shipping facilities good.

JOHN NEBEL & SON SUPPLY CO.,
High Hill, Montg. Co., Mo.

Honey Markets, continued from page 2.

ALBANY.—There is practically no honey market now to report. This is the first time in our memory when we have not had a case of comb on hand. We have a good demand for any grade of comb honey now at prices ranging from 15 to 18 on white and 12 to 15 on dark and mixed grades. Extracted honey is more plentiful at 7 to 7½ for dark and 8 to 9 for light. Beeswax, 32.

Albany, Feb. 3.

H. R. WRIGHT.

ZANESVILLE.—There is still a little honey arriving—enough, evidently, to supply the demand, which is very slack now. There has not been any change in prices since our last report. No. 1 white comb brings 20 cts. in single-case lots; best quality of extracted in 60-lb. cans, 10 to 12. Producers are offered for beeswax 29 cts. in cash or 31 in exchange for supplies.

Zanesville, O., Feb. 3.

E. W. PEIRCE.

DENVER.—The supply of strictly white comb honey is about exhausted, and prices are, as a consequence, higher than they otherwise would be, as the demand is light. We quote No. 1 white comb honey, per case of 24 sections, \$3.60; No. 1 light amber, \$3.35; No. 2, \$3.15. White extracted brings 9 cts.; light amber, 8; strained, 6½ to 7½. For clean yellow beeswax we pay 26 cts. in cash or 28 in trade, delivered here.

THE COLORADO HONEY-PRODUCERS' ASSO'N,
Denver, Feb. 3. F. Rauchfuss, Manager.

BUFFALO.—The demand for white comb honey has improved very much of late. The market is very firm, and we think it will soon be higher. There is but very little in this market, and but little to come in from around this part of the country. There is a marked improvement for under grades of comb honey; some demand for dark extracted; not much call for white. We quote fancy white comb honey, at 17 to 18; No. 1 ditto, 16 to 17; No. 2 ditto, 12 to 14; dark, 11 to 12; white extracted, 8 to 9; dark ditto, 7 to 7½. Beeswax, 28 to 30.

Buffalo, N. Y., Feb. 7.

W. C. TOWNSEND.

THE NATIONAL BEE - KEEPERS' ASSOCIATION

OBJECTS

1. To promote the interests of bee-keepers.
2. To protect and defend its members in their lawful rights as to keeping bees.
3. To enforce laws against adulteration of honey.

MEMBERSHIP DUES

One dollar a year.

OFFICERS AND EXECUTIVE COMMITTEE

PRESIDENT.—George W. York, Chicago, Ill.
VICE-PRESIDENT.—W. D. Wright, Altamont, N. Y.

The Service That Satisfies

Mr. E. W. Peirce:—Our transactions have been perfectly satisfactory to me. You certainly fill orders with accuracy and dispatch. I receive freight orders almost as quick as return mail, even during the honey-flow. I will recommend you to any one in need of bee-supplies. Yours truly,
Amanda, Ohio, Jan. 26, 1912. E. WILLIAMSON.

The foregoing is a fair sample of letters that are constantly being received from pleased customers. "There's a reason"—several of them. In the first place, the quality of supplies handled by this house is the very best—ROOT'S goods are the standard of excellence. Then there is the matter of location. Our city has unsurpassed shipping facilities, insuring delivery of orders with minimum delay. Add to this the elimination of "red tape," prompt and painstaking care in packing goods, and last, but not least, fair and courteous treatment, and you have THE SERVICE THAT SATISFIES.

Have you tried it? If not, ask for our illustrated catalog, which explains every thing. A postal card will bring it.

Why Not REAR Your Own QUEENS?

Doolittle's "Scientific Queen-Rearing" and the American Bee Journal for 1912—Both for Only **\$1.00**

Every Bee-keeper Should Have Both Book and Bee-Paper.

DOOOLITTLE'S "Scientific Queen-Rearing" book contains 126 pages, and is bound in leatherette with round corners. It tells in the clearest way possible just how the famous queen-breeder, Mr. G. M. Doolittle, rears the best of queen-bees in perfect accord with Nature's way. It is for both amateur and veteran in bee-keeping. As all know, Mr. Doolittle has spent some 40 years in rearing queens and producing honey. He has no superior as a queen-breeder. You can learn to rear fine queens by following his directions. Read up now before the bee season is here.

You will not regret having this book, which also gives his management of the bees for the production of honey.

The book, and the American Bee Journal for 1912, for only \$1.00, is certainly a big bargain for you. Send the \$1.00 now, and we will begin your subscription with January 1, 1912, and mail you the book. Sample copy of the Bee Journal free. Address

GEORGE W. YORK & CO.,

117 No. Jefferson St., Chicago, Ill.

Protection Hive

The best and lowest-priced double-wall hive on the market. This hive has $\frac{1}{2}$ material in the outer wall, and is not cheaply made of $\frac{3}{4}$ material as are some other hives on the market. Send for circular showing 12 large illustrations. It will pay to investigate.

A. G. WOODMAN CO., Grand Rapids, Mich.

Bingham Smokers

Insist on "Old Reliable" Bingham Smokers, for sale by all dealers in bee-keepers' supplies. For over 30 years the standard in all countries. The smoker with a valve in the bellows, direct draft, bent cap, inverted bellows, and soot-burning device.

Smoker engine, 4-inch, each, \$1.25; mail, \$1.50.

Doctor, $\frac{3}{4}$ -inch, each, .85; mail, \$1.10.

Conqueror, 3-inch, each, .75; mail, \$1.00.

Little Wonder, 2-inch, each, .50; mail, .65.

Honey-knife, .70; mail, .80.

Manufactured only by

BINGHAM
 SELF-CLEANING
 BEE SMOKER

A MAIN POINT OF DISTRIBUTION!

NATURALLY the center of our large export business, and logically the source from which a majority of Eastern Bee-keepers expect their supplies to come, our NEW YORK BRANCH has been made A MAIN POINT OF DISTRIBUTION for all goods in the big ROOT LINE. Equipped for service in the fullest meaning of the word, well stocked, well managed, familiarity with every appliance for successful bee-keeping and the highways and byways of shipping, here, as perhaps at no other point are we thoroughly prepared to care for the wants of our Eastern bee-keeping friends.

1912 Supplies and Stock.

We have a complete line of all goods listed in the ROOT catalog, and carloads of fresh-stock goods come on continually from our factory. Orders for special-sized goods may be sent here—and we will order same from our factory to be shipped in car to New York and we will re-ship from here, thus saving an item on your freight charges. When ordering goods, be specific. Try to use our "KEY TABLE" as much as possible in specifying hives or parts of hives ordered. If not familiar or uncertain of articles ordered or letters representing some of our goods, give illustration and page number.

Shipping Facilities.

Insure yourself of quick delivery by sending your orders to New York. Here is the terminal of nearly all railroads—north, west, south, and the main steamship lines whereby we can ship goods direct to you without change or delay. All express companies call at our warehouse daily, thus assisting us in serving you. Our facilities for shipping by freight, express, and boat are truly unexcelled. Avail yourself of this opportunity of quick delivery and low shipping charges which you certainly will obtain by ordering your goods of the New York Branch of The A. I. Root Co.

Packing.

We do not charge for packing, boxing, or delivering to freight offices in New York. We do not prepay any charges unless goods are to be delivered to a prepaid station, as all our prices and quotations are F. O. B. New York. If no agent at your station, notify us and we will prepay, and bill charges after shipment. Often during the busy season much time can be saved by ordering small shipments sent by express. Your local agent will tell you about what charges will be from New York.

Careful Attention and Prompt Service is Our Aim. We Try to Ship Mail and Express Orders the Day They are Received. Freight Orders are Filled in Order of Receipt. No Order is too Small or Large for Our Personal Attention.

OUR LOCATION.—We are now located in the Sapco Building in the downtown district. Our office is convenient to surface, subway, and elevated stations and to all downtown ferries. Here you will find well-fitted display rooms, with complete line of supplies, booklets, etc., always on exhibition, and our manager or attendant always present to explain our appliances and discuss the subject of bee-keeping. You and your friends are always welcome.

REMITTANCES.—Remittance with orders should be made by draft, check, postal money order, express money order, or stamps. Do not remit in currency or coin, unless registered, as it often goes astray. We do not care to ship C. O. D.

Order your supplies early. Do not wait until you are in a rush for them. Order now. We want your acquaintance.

Our Manager at the New York branch is thoroughly familiar with every appliance required for successful bee-keeping. His knowledge of outfits for beginners will be found especially beneficial to suburbanites who may want to engage in bee-keeping on a large or small scale. You will find him always willing and ready to make his services of value to whoever seeks his assistance.

Export Orders.—We pay especial attention to all orders for export. For the use of foreign customers we can furnish catalogs in Spanish and French.

**THE A. I. ROOT COMPANY,
NEW YORK CITY.**

ESTABLISHED 1891.

TOEPPERWEIN & MAYFIELD CO.

Cor. Nolan and Cherry Sts.

(Incorporated)

San Antonio, Texas.

Factory and Warehouse.

To Our Friends and Patrons.

In presenting our claims for a continuance of the generous patronage bestowed upon us during the past year, we beg to submit a few facts concerning the bee industry, which may serve to interest our patrons as well as all those engaged in the business.

Owing to the constantly increasing demand for comb foundation and bee-keepers' supplies, we have again been compelled to enlarge our capacity, install new machinery, and otherwise improve our plant, enabling us to produce 500 pounds of comb foundation per day. This has been made possible through the generous patronage given us during the past year, our sales having aggregated approximately \$80,000.

Although it has been found a difficult matter to secure enough beeswax to supply the demand, we have on hand a much larger stock than we have ever had before. We pay for beeswax, average clean, 28c cash or 30c in trade. We also buy and sell honey at ruling prices. On account of the increasing demand for this product the prices in Texas have been higher than in many other States. Bulk comb honey, in the 5 $\frac{1}{2}$ -inch frames, same as described in our catalogue, page 11, Fig. 540, is produced almost exclusively in Texas. In nearly all parts of this State it is best to use the 10-frame hives. As usual we start out with 15,000 cases of honey-cans, and more to come. While there is a good season in the ground, and horsemint is up over nearly the entire State, we will have an ample supply of honey-cans ready for the use of bee-keepers, and prepared for shipment at any moment.

We also desire to invite the attention of our patrons to the fact that, on account of the enormous increase in the demand for our goods last year, it was impossible for us to fill orders as promptly as we should have done, and for that reason we would urge our customers to place their orders as early as possible, in order to avoid delays. It is our special aim to please, and therefore we would ask that the management be immediately notified of any misunderstanding that may arise, assuring our customers that any mistake or misunderstanding that may occur will be cheerfully and amicably adjusted by us.

Judging from the unusual number of orders received as early as November and December of last year, together with the exceptionally favorable prospects ahead, we anticipate a much greater volume of business than ever before; however that may be, it is always a source of gratification to us to please and satisfy our customers, and to that end we shall do our best.

REMEMBER! We are giving early-order discounts for cash, just as you get from the manufacturers we represent. **YOU SAVE MORE** by ordering here, for freight to San Antonio has been paid by us.

February early-order discount **2 per cent**

March early order discount **1 per cent**

WITH OUR READERS AND ADVERTISERS

To many not really well acquainted with our readers it might appear that the columns of a bee-journal might not be especially productive of results for poultry-supply advertisers; and yet when we consider the close relation between the two industries it isn't to be wondered at that the man who keeps bees probably has poultry too; or if he hasn't he could be easily induced to take up this profitable branch of rural or farm life.

Time was when every farmer and man with a small place kept "chickens" with more or less indifferent results. In the last few years the business has been raised to the dignity of a profession, and thousands are making comfortable incomes from poultry alone. In driving through the country you will notice in almost every farmyard a flock of well-kept high-grade stock, with well-painted sightly buildings for them in the back-ground; and if you would take the trouble to go into one of these places you would find them equipped with the best of every thing in the line that the market affords.

And what has brought about this change? Why, advertising, of course! Manufacturers and breeders knew long ago that there was a deal of money to be made in the poultry business rightly conducted; and the only way to convince the farmer and home-owner of the ultimate satisfactory returns from an investment in the best supplies and the best stock was through the advertising columns of his favorite paper. And right here is where GLEANINGS comes in; for it is the favorite paper of a large per cent of its readers, and actual reports from advertisers show that they frequently get as good (or better) results from our paper as they do from the poultry-journals themselves. Just today we have a letter from Ambrose & Knight, of Urbana, Ohio, advertisers of baby chicks, who have carried a small advertisement in our classified columns for a season or two, in which they say, "We are well pleased with the result we had last year from our advertising with you." GLEANINGS not only brings inquiries but orders and re-orders.

Results to the advertiser are results to the reader, for satisfactory returns from a paper to a manufacturer or breeder induce him to give of his best to the readers of that paper. One hardly needs to buy expensive poultry-books if he reads such advertisements carefully and profits by the information contained in the catalogs and printed matter sent out by advertisers.

If you are at all interested in poultry (and it seems to us every one of our readers ought to be) it will pay you to study the advertisements in this paper and to send for printed matter from such as appeal most to you. Bees and poultry dovetail nicely, and you will enjoy the poultry department by our senior editor more than ever if you can duplicate some of his experiences in your own back yard.

"If goods are wanted quick, send to Powder."

(Twenty-third year).

He Comes Up Smiling

When he gets his
material here.

A large and complete stock of the Root goods on hand at the factory schedule of prices. My system of rotating does not permit of any accumulation of old stock; my comb foundation is always fresh from the mills; sections fresh and bright, and hives have all of the latest improvements. Early-order discounts are still available. If you have not been getting your goods here I am sure I can interest you, and just at this season of the year the question of supplies is an interesting one. My stock of goods, my equipment and shipping facilities, would be a revelation to any bee-keeper who can call and see for himself. My new catalog is the most complete that I have ever sent out, and explains much as to how the Pee Supply business is handled in Indiana.

HONEY—As heretofore I still maintain quality, and have a large stock on hand at all times of the very best that can be produced, and my prices will be found correct.

BEE SWAX—You can now avail yourself of 31 cents per pound for your wax by sending it here in exchange for supplies, and wax is the same as gold coin to me at all times.

Walter S. Powder, Indianapolis. Dear Sir:—Referring to the bill of goods ordered from you recently, I will say that I was much pleased with the goods and also with your promptness. *I sent to Powder and got them quick.* Will be in need of more goods soon and will get them *quick*. Again thanking you,
JEFFERSONVILLE, IND. ORLANDO COLEMAN.

If you have not received my new catalog in the regular way I will be thankful for a postal with your name and address.

WALTER S. POWDER, Indianapolis, Ind.

359 Massachusetts Ave.

This Is Advertising You Can't Buy.

Nowadays any one in the Bee-supply business, with the necessary money, can advertise.

But there is one kind of advertising that is not bought and can not be bought. These are the good words that go from mouth to mouth about

LEWIS BEEWARE DADANT'S FOUNDATION AND THE SOUTHWESTERN BEE CO.

We urge you to ask any bee-keeper about these goods which are being sold by us exclusively in Texas, and also about the

SOUTHWESTERN BEE COMPANY

You are the jury and you are the judge.

Texas Bee-keepers!

We constantly carry on hand at our new place of business, 1022 South Flores Street, San Antonio, several carloads of the famous Lewis Beeware and tons of Dadant's Foundation as well as American Can Company's cans in large quantities.

Come right to us when you are in the market. We sell what you have to buy, we buy what you have to sell.

Don't experiment with poor bee-hives or inferior foundation.

Let Lewis and Dadant and The Southwestern Bee Company be your slogan, and you will go into port at the end of the season with a full cargo successfully produced.

SOUTHWESTERN BEE COMPANY

1022 South Flores Street

SAN ANTONIO, TEXAS.

YOU Can't Go Wrong In Ordering a World's Cham- pionship Belle City Incubator and Brooder

Right From This Advertisement
On 1, 2 or 3 Month's Home Test

MAYBE you want to get your machine quick—maybe you want to be ready for early hatches. If you do, you take no risk whatever over any risk you take when ordering from anywhere else. In ordering direct from this advertisement, you save time and trouble and I guarantee everything to be satisfactory.

Here is my proposition—for only \$7.55 I will ship to you, all freight prepaid East of the Rockies, my 140-Egg Double World's Championship Belle City Incubator—the machine that has won the World's Championship in over five thousand hatches. Read description—

My 140-Egg Belle City World's Championship Incubator has simple, perfect self-regulator correct hot water heating system, copper tank, and boiler, safety lamp, double walls and double door, with dead air space all over, with roomy nursery and strong egg tray. Of course the thermometer is right; I use the "Tycos." I also supply egg-tester, burner, funnel, everything you need including valuable instruction book on operation, hatching and care of chicks.

For only \$4.85 I will deliver to you my celebrated 140-Chick Belle City Brooder—the brooder

that is guaranteed to raise more healthy chicks than any other brooder made.

The Belle City Brooder is as perfect as the Incubator—140-chick size—and my price is \$4.85. It's double-walled, hot water, top-heated, metal safety lamp and burner, wire runway yard with platform. Absolutely the most perfect chick raiser made today.

Combination \$11⁵⁰ Freight Offer, Only ^{Prepaid} East of Rockies

Ordered together, my 140-Egg Belle City Incubator and 140-Chick Brooder, will cost you only \$11.50 all freight prepaid East of the Rockies. This saves you 90c which will furnish all the oil you will want to use this season on your machine. I guarantee to ship orders received from this advertisement on the same day received either from my warehouse branches located at Buffalo, Kansas City, St. Paul or Racine. This insures quick action—insures your getting started early.

Read the letter from the Commercial and Savings Bank of Racine at the bottom of this advertisement as your protection. Why not order now or let me send you my portfolio, "Hatching Facts"—the most unique piece of poultry literature published different from all the rest better than the best. This portfolio shipped with each machine ordered, or I will send it to you for your name on a postal card.

How to Get Big Poultry Profits.

Edgar Briggs, the most successful poultry expert in America, tells how to make the greatest success with poultry in his book,

Profits in Poultry-keeping Solved.

It covers every branch of poultry-keeping, and contains the many priceless secrets which you must know in order to get the largest profits from poultry. It also tells how to make the best poultry food for from 10 to 15 cts. per bushel. Briggs' System calls for less equipment, labor, and expenses than other plans, and by it one man can easily care for 2000 layers and 3000 chicks.

If You Have but Limited Space

you should get our new book, just published.

The Smith Method of Poultry-keeping,

which gives the best, most comprehensive, and practical system we know of for keeping many fowls on a small lot. It cuts down the work and care required to the minimum, and does not require elaborate equipment. It is also well adapted for large plants.

Our Offers.

For \$1.00 we will send you your choice of either book, and include POULTRY SUCCESS, the leading poultry magazine, for one year. Regular subscription price of POULTRY SUCCESS, 50 cts. per year.

For \$1.75 we will send you both books and include POULTRY SUCCESS for one year.

For \$1.00 we will send POULTRY SUCCESS for three years. Regular price 50 cts. per year; sample copy free.

A practical car for busy bee-keepers

Here's just the car you want for those quick business trips—and to get the most enjoyment out of the hour or so that you and your family may have after the work for the day is done.

The Cartercar is most reliable because of the extremely simple and strong construction. No matter whether rain or shine it is always ready for the word "Go."

When you are in a hurry the Cartercar can be depended on to get you to your destination in double quick time. If it's just pleasure you seek, the car rolls along easily and noiselessly.

The friction transmission of the Cartercar makes it the most reliable yet the most enjoyable of all automobiles. This transmission is so simple that it does

not get out of order—and it eliminates all jerks and jars in starting.

There are any number of speeds at your command. All are easily and noiselessly controlled by one lever. The farther forward the lever is pushed the faster the speed. When the lever is pulled back the speed is reversed.

The chain-in-oil drive is noiseless. The case is dust and grit tight and permits the chain to operate in oil, thus eliminating almost all wear on the chain.

The bee-keeper who drives a Cartercar has more time—can do more work—make more money—and knows the real joy of living.

Let us send you valuable information concerning these excellent automobiles.

Cartercar Company

Pontiac, Michigan

New Wheels

for the Old Wagon

Let us fit your old wagon with "Electric" steel wheels and make it strong and good as new. Another wagon life and a *real handy wagon* just by buying wheels. Broad tires, never any resetting, no drying apart, rattling or coming loose. Free book gives particulars and shows how it pays big to fit up old wagons with the long-life Electric Steel Wheels. Write for copy.

ELECTRIC WHEEL CO., BOX 23, QUINCY, ILL.

Electric

THE "BEST" LIGHT

MAKES and burns its own gas. Produces 100 candle power light—brighter than electricity or acetylene—cheaper than kerosene. No dirt. No grease. No odor. Over 200 styles. Every lamp warranted. Agents wanted. Write for catalog. Do not delay.

H. C. Phelps, Pres.

Phelps' Big Show-Room Buggy Book for 1912 Is Now Ready

It's the best one I have ever gotten out. It has more styles to select from, both in vehicles and harness. Why try to select a buggy from two or three shop-worn, dust-covered samples, when I will send right to your home a book that shows in big, actual photographs more vehicles than you can find in 25 stores. Local dealers carry only a few styles to select from. I make 125 styles of automobile seat buggies, surreys, phaetons, road carts, etc., and a full line of harness. All made-to-order to suit your taste.

Save Big Money on Split Hickory Vehicles Direct From the Factory

All explained fully and illustrated with big photographs in my big new book. It is only a question of good sound judgment to send for this free book no matter where you buy. It will cost you only one penny but it will cost me many pennies to send it to you, but I will take the chance if you are willing, because it is my only salesman and I am sure that I can not only give you a better buggy, but save you a lot of money. Will you write for the book? You are invited to do so. I will pay the postage.

S. C. Black Leghorns. Our birds are winners and great layers. Descriptive circular free; contains full information. Write your wants. Address THE VAN DRUST FARMS, Cedar Grove, Wis.

Stock chicks' eggs ready for delivery; standard-bred heavy-laying Barred Rocks, S. C. R. I. Reds, S. C. White Leghorns. A patron reports over 1500 eggs from 10 hens in 12 months. Catalog free. CRYSTAL SPRING FARM, Rt. 3, Lititz, Pa.

DUMARESQ SICILIAN BUTTERCUPS.—Some fine young stock from my blue-ribbon winners at Appalachian exposition and other shows. Testimonial of pullets laying in 124 days. Send for circular. MRS. J. S. DUMARESQ, Cato's Hall, Easton, Md.

CRYSTAL WHITE ORPINGTONS, Kellerstrass strain. First pen headed by cockerel that scored 92, Medina and Akron. Vigorous birds, pure in color and mating. Send egg orders now and hatch early; \$3.50 for setting of 15. Satisfaction, fertility, and safe shipment guaranteed.

M. D. KIMMELL, Medina, O.

Prize-winning S. C. R. I. Reds, thoroughbred White Orpington, Barred Plymouth Rocks, Indian Runner ducks, fawn and white; white egg strain; eggs; drakes and cockerels.

DAVID M. HAMMOND,
Woodside Poultry Yards, Rt. 5, Cortland, N. Y.

SICILIAN BUTTERCUPS—Mr. A. I. Root's favorites; larger than Leghorns, which they somewhat resemble, and more prolific layers. Get a good start with coming breed. My stock direct from original importation—none better anywhere. Now booking orders—delivery when desired. Eggs \$3.50 and \$5.00 per 15. Safe shipment, fertility, and satisfaction guaranteed.

SECRETARY BUTTERCUP ASSOCIATION, Medina, O.

BABY CHICKS.—We are in better shape than ever this year to supply your wants in baby chicks. Our stock is all hatched from strong vigorous birds, almost sure to grow and do well. We can supply chicks from S. C. White Leghorns, S. C. Buff and Black Orpingtons, Anconas, White Plymouth Rocks, R. C. R. I. Reds. Let us know what you want and we'll quote you prices from $\frac{1}{3}$ to $\frac{1}{2}$ less than others on the same grade of stock. Eggs from any of the above varieties from \$1.50 per 15 up. Feel free to write us.

AMBROSE & KNIGHT,
Hardware, Field Seeds, Poultry Supplies,
Urbana, Ohio.

Pigeons and Pet Stock

PIGEONS! PIGEONS!—Thousands in all leading varieties at lowest prices. Squab-breeding stock our specialty; 17 years' experience. Illustrated matter free. PROVIDENCE SQUAB CO., Providence, R. I.

Bee-keepers' Directory

Nutmeg Italian queens, after June 1, \$1.00. Circular. A. W. YATES, 3 Chapman St., Hartford, Ct.

Bees, queens, supplies, and export; free school. W. C. MORRIS, 74 Cortlandt St., New York.

Well-bred bees and queens. Hives and supplies. J. H. M. COOK, 70 Cortlandt St., New York.

Improved golden-yellow Italian queens for 1912; beautiful, hustling, gentle workers. Send for price list to E. E. LAWRENCE, Doniphan, Mo.

QUEENS.—Improved red-clover Italians, bred for business: June 1 to Nov. 15, untested queens, 75 cts.; select, \$1.00; tested, \$1.25 each. Safe arrival and satisfaction guaranteed. H. C. CLEMONS, Boyd, Ky.

QUIRIN'S famous improved Italian queens, nuclei, colonies, and bees by the pound, ready in May. Our stock is northern-bred and hardy; five yards wintered on summer stands in 1908 and 1909 without a single loss. For prices, send for circular.

QUIRIN-THE-QUEEN-BREEDER, Bellevue, O.

Convention Notices

The annual convention of the Western New York Bee-keepers' Association will be held at Convention Hall, Rochester, Feb. 27, 1912. Some of the leading bee-keepers of the State will be present. All are invited to be present and participate.

Rochester, N. Y. EARL F. CASE, Sec.

The convention of the South Dakota Bee-keepers' Association has been postponed from Jan. 18 and 19) to March 20 and 21, on account of cold weather. The program will be the same, and the meeting will be held in the same place as announced—Auditorium, Sioux Falls.

Canton, S. D.

L. A. SYVERUD, Sec.

Special Notices

By OUR BUSINESS MANAGER

We call attention again to the removal of our New York branch office to 139 Franklin St., Sapco Building, telephone Franklin 531. Visitors in New York are urged to call; and those who are in the habit of sending their orders to that branch will find us better equipped than ever before to serve them promptly. See full announcement on p. 10.

HOTBED SASH.

We have just printed a booklet of 25 pages, entitled "How to Make and Run a Hotbed," which we shall be pleased to mail on request. If interested in early vegetables it will be well worth your while to read it and put its instructions into practice. If in need of sash or glass we have a good stock on hand ready for prompt shipment.

ALSIKE-CLOVER SEED.

Owing to the dry season last summer, and a light crop, the price of all kinds of clover seed is ruling very high, and \$15.00 a bushel is about the ruling price of medium and mammoth, while white runs as high as \$23.00 for choice seed. We have a limited supply of alsike, which we offer, while it lasts, at 30 cts. per lb.; \$4.00 per peck; \$7.50 per half-bushel; \$14.50 per bushel, or \$28.00 for two bushels, bags included. We can ship from Stockport, Iowa, either medium or alsike at above prices.

SWEET-CLOVER SEED.

We have been disappointed in getting a quantity of hulled white-sweet-clover seed from the West, for which we contracted last August. As a consequence our supply is limited, and a fresh supply of imported seed costs more than it did a year ago. We are obliged, therefore, to mark up our prices on hulled white seed 2 cts. per lb. above those quoted in our last issue. The revised price is 25 cts. per lb.; 10 lbs., \$2.20; 25 lbs., \$5.25; 100 lbs., \$20.00.

POWER HONEY-EXTRACTORS.

Our power extractors of recent make have created such a favorable impression wherever seen that orders for them are very much on the increase. As will be seen by our catalog, this year we are offering a little rotary pump which is connected to the extractor, and operated from the same gear-bar, for only \$15.00 extra. This will elevate the honey, as fast as extracted, to a storage-tank on a floor above if necessary.

The new sixty-speed engine on trucks, of 1½ horse power, is a marvel of simplicity and wide range of application to many kinds of work. It sells for \$85.00, or a 3 h. p. of the same style for \$90.00. The old-style air-cooled engine, made by the same people, we can now sell for only \$50.00 for 1 h. p. without fan; \$55.00 with fan.

MAPLE SUGAR AND SYRUP.

Owing to the heavy demand last year for our Ohio rock-maple syrup and sugar we have decided to book orders in advance of the crop at the following prices:

Single one-gallon can or one case of six one-gallon cans, at \$1.25 per gallon.

Two to ten cases of six one-gallon cans to case, at \$1.15 per gallon.

Larger quantities, 75 to 100 gallons, at \$1.10 per gallon.

For a number of years we have not been able to get sufficient quantities of maple sugar to meet the demand. We hope this year to obtain a larger supply. We quote as follows:

1 to 25 lbs. best rock-maple sugar at 15 cts. per lb.

25 to 50 lbs. ditto at 14 cts.

50 to 250 lbs. ditto at 13 cts.

250 to 1000 lbs. ditto at 12 cts.

WANTED.—All Southern Idaho bee-keepers to know they can get all kinds of bee-keepers' supplies at home. Write for catalog. I have my own factory.

C. E. SHRIVER,
1623 Bannock St., Boise, Idaho.

PYROX fills the barrel with the apples that used to be on top. Write BOWKER INSECTICIDE Co., Boston, for book.

PUBLICATIONS ON

BEE CULTURE

Please use coupon below, checking the numbers of items wanted.

The pamphlets and booklets listed below are of more than ordinary interest:

- 1 **My First Season's Experience with the Honey-bee.** By the "Spectator," of the *Outlook*, of New York. A ten-page leaflet detailing the experiences of this well-known writer. You will read the leaflet through before you lay it down. Free.
- 2 **The Bee-keeper and Fruit-grower.** A 15-page booklet giving actual facts regarding the value of bees to fruit, and showing how bee-keeping may be doubly profitable to the fruit-grower. Fruit-growers are realizing as never before the necessity of having honey-bees in close proximity to their blossoming fruit. Free.
- 3 **Bee-keeping for Sedentary Folk.** A 24-page leaflet reciting the actual experiences of an amateur bee-keeper, showing what equipment is best, points derived, etc. Free.
- 4 **Catalog of Bee-keepers' Supplies.** Our complete catalog will be mailed free to any address on request.
- 8 **Habits of the Honey-bee.** By Dr. E. F. Phillips. A somewhat scientific handling of the habits and anatomy of the bee. Price 10 cts.
- 9 **How to Keep Bees.** A book of 228 pages detailing in a most interesting manner the experience of a beginner in such a way as to help other beginners. Price \$1.00 postpaid.
- 10 **The A B C of Bee Culture.** A complete encyclopedia of bees, of 576 pages, fully illustrated, \$1.50 postpaid; half leather, \$2.
- 11 **Cleanings in Bee Culture.** A 64-page illustrated semi-monthly magazine, the leading exponent of bee culture in this country. Ten cents per issue, but to new subscribers we will furnish it six months for 25 cts.
- 12 **Back-yard Bee-keeping.** Six interesting lessons written in readable newspaper style. Many facts to encourage the "City Bound" man or woman with the back-to-the-land longing. Free.
- 13 **The Buckeye Bee-hive,** or the management of bees in double-walled hives. Of special interest to the amateur bee-keeper. A very complete booklet 84 pages. Illustrated throughout, 10 cts.

The coupon below may be used as an order sheet by properly checking the numbers of items wanted and adding your signature, and remittance, if required.

My Farewell Car

By R. E. Olds, Designer

Reo the Fifth—the car I now bring out—is regarded by me as close to finality. Embodied here are the final results of my 25 years of experience. I do not believe that a car materially better will ever be built. In any event, this car marks my limit. So I've called it My Farewell Car.

My 24th Model

This is the twenty-fourth model which I have created in the past 25 years.

They have run from one to six cylinders—from 6 to 60 horsepower; from the primitive cars of the early days to the most luxurious modern machines.

I have run the whole gamut of automobile experience. I have learned the right and the wrong from tens of thousands of users.

In this Farewell car I adopt the size which has come to be standard—the 30 to 35 horsepower, 4-cylinder car.

Where It Excels

The best I have learned

in 25 years is the folly of taking chances. So the chiefest point where this car excels is in excess of care and caution.

In every steel part I use the best alloy ever proved out for the purpose. And all my steel is analyzed, to prove its accord with the formula.

I test my gears with a crushing machine—not a hammer. Thus I know to exactness what each gear will stand.

I put the magneto to a radical test. The carburetor is doubly heated, for low-grade gasoline.

I use Nickel Steel axles of unusual size, with Timken roller bearings. I use Vanadium Steel connections.

So in every part. Each device and material is the best known for the purpose. The margin of safety is always extreme.

In Finish Too

I have also learned that people like stunning appearance. So my body finish consists of 17 coats. The upholstery is deep, and of hair-filled, genuine leather. The lamps are enameled, as per the latest vogue. Even the engine is nickel-trimmed.

The wheel base is long—the tonneau is roomy—the wheels are large—the car is over-tired. In every part of the car you'll find the best that is possible—and more than you expect.

Reo the Fifth

\$1,055

30-35

Wheels—
34 Inches
Demount-
able Rims
Speed—45
Miles per
Hour
Made with
2, 4 and 5
Passenger
Bodies

Top and windshield not included in price. We equip this car with mohair top, side curtains and slip cover, windshield, gas-tank, and speedometer—all for \$100 extra. SELF-STARTER, IF WANTED, \$25 EXTRA.

Initial Price, \$1,055

This car—my finest creation—has been priced for the present at \$1,055. This final and radical paring of cost will stand, I believe, as my greatest achievement.

It has required years of preparation. It has compelled the invention of much automatic machinery. It necessitates making every part in our factory, so no profits go to parts makers.

It requires enormous production, small overhead expense, small selling expense, small profit. It means a standardized car for years to come, with no changes in tools and machinery.

It requires, in addition, that we make only one chassis. By that we save nearly \$200 per car.

Thus Reo the Fifth gives you more for the money than any other car in ex-

istence. Any man can prove that for himself.

But this price is not fixed. It is the uttermost minimum. We shall keep it this low just as long as is possible. But if materials advance—even slightly—our price must also advance.

No price can be fixed for six months in advance without leaving big margin, and we haven't done that. So the present price is not guaranteed.

No Skimping

Men who know me won't think that in fixing this price I have skimmed on this Reo the Fifth. Others should consider what I have at stake—my 25 years of prestige.

If there is one device, one feature, one material better than I here employ, I don't know it. Better workmanship I regard as impossible.

More care and caution cannot be conceived.

I ran one of these cars for ten thousand miles—night and day, at full speed, on rough roads. And the vital parts hardly showed the least sign of wear.

Catalog Ready

Our catalog tells all the materials, gives all specifications. With these facts before you, you can make accurate comparisons with any car you wish.

We ask you to do that. In buying a car for years to come, make sure of the utmost value. Here is the best car I can build after 25 years of experience. You ought to find it out.

The book also shows the various styles of bodies. With two-passenger Roadster body the price is \$1,000.

Write now for this catalog, then we'll tell you where to see the car. Address

R. M. Owen & Co. General Sales Agents for
Reo Motor Car Co. Lansing, Mich.
Canadian Factory, St. Catharines, Ont.

New Center Control No Levers—No Reaching

Note this new feature—the center, cane-handle control. This handle moves but three inches in each of four directions. That very slight motion does all of the gear-shifting.

Note the absence of levers. The driver's way is as clear, on either side, as the entrance to the tonneau.

Both brakes are operated by foot pedals. One pedal also operates the clutch. The driver sits as he should sit, on the left-hand side. Heretofore this was possible only with electrics.

Those are a few of the ways in which Reo the Fifth shows its up-to-date-ness.

Learn
the

Exact Truth About Poultry Profits

A few hens cannot make you a millionaire.
On the other hand, don't get the wrong
notion that "there is nothing in chickens"
—that poultry profits are only for experts.

If you want a few hens to supply your own breakfast eggs, it is easy; to sell eggs and broilers at a fair profit is easy, too; to build a big poultry or egg business, paying thousands of dollars profit per year, is harder, but quite possible; it has been done many times,

A Rancocas Unit at Work

and will be done many times more. But remember, it takes **BRAINS** and **EXPERIENCE**. You must supply the brains, and we will, if you wish, supply the experience of one of the three greatest poultrymen in the world. You can learn the truth—the exact truth—about poultry, if you will read this advertisement—and act.

J. M. Foster, the "Egg King," will show you how to begin—what is the best breed for eggs—how and what to feed—how to force hens to lay heavily—how to secure early molt and quick recovery—how to insure winter eggs when prices are high—how to get more pullets than cockerels, and many other facts—all money makers. All this gold mine of costly experience and knowledge will be found in

"The Million Egg Farm"

of which FARM JOURNAL has sold many thousand copies. It is by Joel M. Foster, of the Rancocas Poultry Farm. We call him the "Egg King," because he marketed last year the astounding total of 1,121,478 eggs. "In writing *The Million Egg Farm*," says Mr. Foster, "I had one thought continually in mind—TO HELP THE BEGINNER. I myself was a beginner only five years ago, so I know what beginners need to know—and I put it all in the book. It is for the man who has a dozen hens on a back lot even more than the man who numbers his birds by the thousands."

Let us show you what it has meant to Robert Liddle, a clerk of Scranton, Pa., to follow the direction in this booklet. In May, 1910, he bought 2,300 day old chicks. He spent just one week studying the methods now given in this book, absolutely his only preparation for the business. What has been the result? He raised 95 per cent. of his chicks. Of these, 1,350 proved to be pullets. On November 28, 1910, less than seven months later, he was getting upwards of 425 eggs daily, and selling them for 58 cents per dozen wholesale, nearly 5 cents apiece. His feed cost averages \$4.00 per day, leaving over \$17.00 a day profit, and this before all his birds had begun laying.

Every Statement a Proved Fact

Before accepting the manuscript from Mr. Foster, FARM JOURNAL made expert and exhaustive examination into the methods used at the farm, and sent Lybrand, Ross Bros. & Montgomery, Public Accountants, Land Title Bldg., Phila., to verify all claims as to production, sales and profits. They found that for the year ending July 31, 1910, the profits were \$19,484.83. Write them and prove it.

We believe this masterly book should be read by every hen owner, and we have therefore arranged to supply it in the following extraordinary offer:

One Copy "Million Egg Farm," postpaid }
FARM JOURNAL, four full years } **Only \$1.00**

FARM JOURNAL,
117 N. Clifton St., Philadelphia, Pa.

Gentlemen: Enclosed is my dollar, for which send me your book, "THE MILLION EGG FARM"—and put my name and address on your paid-in-advance subscription list to get FARM JOURNAL, for four years.

Name _____

Post Office _____

R. F. D. _____ State _____

FARM JOURNAL has for 34 years paid special attention to poultry, and this department is known the country over for its authority and value. It is the standard home and farm paper, with more than 750,000 paid subscribers. It is for the poultryman, gardener, fruit grower, trucker, farmer, villager, suburbanite, the women folks, the boys and girls. It is cut to fit YOU, too. Cheerful, amusing, intensely practical, absolutely clean. And when the time is up it will stop.

Cut out and mail this coupon with a dollar to-day. If you order promptly, we will send, absolutely free, "Poor Richard Revived"—our splendid new Almanac for 1912.

Gleanings in Bee Culture

VOL. XL. MARCH 1, 1912, NO. 5.

This Model Outfit

for Beginners in Bee-keeping Costs Only **\$30**

Here is an illustration of a complete outfit for the man or woman who wants to make a start in bee-keeping in a small way. With every thing first-class, and ready for immediate use, and with bees of purest Italian strain (which are included), this outfit will afford a fine opportunity to study the work of these interesting little pets, and prepare for broader developments.

No reason at all why this single colony should not provide an extra swarm for the empty hive the very first season, and under right conditions there will be a nice honey-harvest, too.

Many people have wanted to keep bees, but have never made a start because of lack of facilities for protecting the hives sufficiently to winter the bees safely out of doors where the winters are severe. The double-walled hives suggested in this outfit are adapted for outdoor wintering, relieving the bee-keeper of the work of preparing the hives for winter; and for those who want to keep bees for pleasure as well as profit, we recommend this outfit most highly. Following is a list of articles included in the above outfit, numbered to correspond:

1—Full Colony of Bees in Ten-frame Double-walled Buckeye Hive, Complete with 28 Sections	\$14.50
Tested Italian Queen for Above	3.00
2—Empty Hive Complete for Hiving New Swarm	5.95
2A—2 Extra Comb-honey Supers	2.10
3—One Year's Subscription to Gleanings in Bee Culture (large semi-monthly, illustrated)	1.00
4—Standard Root Smoker	.85
5—A B C of Bee Culture	1.50
6—Pair of Bee-gloves	.50
7—No. 2 Bee-veil	.60

No. 8 shows two brood-frames with full sheets of foundation from which the bees build honey-comb. There are ten such frames in each of the hives. No. 9 is a super-cover. No. 10 is a tray which is filled with chaff or other packing material to afford protection in winter. No. 11 is the hive-cover or roof which telescopes the hive-body as shown in No. 1.

Special Offer { Delivered at any express office in U. S. east of Mississippi River and north of Ohio River **\$30.00**

For delivery to points outside of the above free limit, we will make terms on application.

The investment here is a little more than for some of the other outfits we furnish; but if you expect to keep a few bees only, just for recreation or to make enough money for your own table, you will not need to make any further purchases for some time, except a few extra sections the second season. We take special pains to put up these outfits in such fine shape that the bees are sure to reach destination in prime condition. In these hives the bees will almost take care of themselves, summer and winter.

Where the good bee-hives come from

Factory--Falconer, N. Y.

117 North Jefferson St., Chicago, Ill.

Honey Markets

The prices listed below are intended to represent, as nearly as possible, the average market prices at which honey and beeswax are selling at the time of the report in the city mentioned. Unless otherwise stated, this is the price at which sales are being made by commission merchants or by producers direct to the retail merchant. When sales are made by commission merchants the usual commission (from five to ten per cent), cartage, and freight will be deducted; and in addition there is often a charge for storage by the commission merchant. When sales are made by the producer direct to the retailer, commission and storage, and other charges, are eliminated. Sales made to wholesale houses are usually about ten per cent less than those to retail merchants.

EASTERN GRADING RULES FOR COMB HONEY.

FANCY.—All sections well filled, combs straight, firmly attached to all four sides, the combs unsoiled by travel-stain or otherwise, all the cells sealed except an occasional one, the outside surface of the wood well scraped of propolis.

A No. 1.—All sections well filled except the row of cells next to the wood; combs straight; one-eighth part of comb surface soiled, or the entire surface slightly soiled; the outside surface of the wood well scraped of propolis.

No. 1.—All sections well filled except the row of cells next to the wood; combs comparatively even; one-eighth part of comb surface soiled, or the entire surface slightly soiled.

No. 2.—Three-fourths of the total surface must be filled and sealed.

No. 3.—Must weigh at least half as much as a full-weight section.

In addition to this the honey is to be classified according to color, using the terms white, amber, and dark; that is, there will be "Fancy white," "No. 1 Dark," etc.

NEW COMB-HONEY GRADING-RULES ADOPTED BY THE COLORADO STATE BEE-KEEPERS' ASSOCIATION.

No. 1 WHITE.—Sections to be well filled and evenly capped except the outside row, next to the wood; honey white or slightly amber, comb and cappings white, and not projecting beyond the wood; wood to be well cleaned; cases of separated honey to average 21 pounds net per case of 24 sections, no section in this grade to weigh less than 13½ ounces.

Cases of half-separated honey to average not less than 22 pounds net per case of 24 sections.

Cases of unseparated honey to average not less than 23 pounds net per case of 24 sections.

No. 1 LIGHT AMBER.—Sections to be well filled and evenly capped, except the outside row, next to the wood; honey white or light amber; comb and cappings from white to off color, but not dark; comb not projecting beyond the wood; wood to be well cleaned.

Cases of separated honey to average 21 pounds net per case of 24 sections; no section in this grade to weigh less than 13½ ounces.

Cases of half-separated honey to average not less than 22 pounds net per case of 24 sections.

Cases of unseparated honey to average not less than 23 pounds net per case of 24 sections.

No. 2.—This includes all white honey, and amber honey not included in the above grades; sections to be fairly well filled and capped, no more than 25 un-

capped cells, exclusive of outside row, permitted in this grade, wood to be well cleaned, no section in this grade to weigh less than 12 ounces.

Cases of separated honey to average not less than 19 pounds net.

Cases of half-separated honey to average not less than 20 pounds net per case of 24 sections.

Cases of unseparated honey to average not less than 21 pounds net per case of 24 sections.

BOSTON.—We quote fancy white comb at 17 to 18; light amber, 15; amber, 14; fancy white extracted, 10 to 11; light amber, 9 to 10; amber, 9. Beeswax, 30. Boston, Feb. 20. **BLAKE-LEE CO.**

COLUMBUS.—Good honey is extremely scarce. No. 1 and fancy are wanted. Fancy, in jars, sells at 18; No. 1 ditto, 17; No. 2, 14. Extracted is not wanted. Columbus, Feb. 23. **THE EVANS & TURNER CO.**

SCHENECTADY.—We have no desirable comb honey to offer. There is some demand for white uncandied stock. Extracted is moving slowly, and stock is accumulating, with a decline of ½ ct. per lb. in prices from last quotations. Schenectady, Feb. 19. **CHAS. MACCULLOCH.**

INDIANAPOLIS.—White comb sells at 18 cents in ten-case lots. Amber grades are in slow demand at lower figures. Best extracted sells at 11 to 12 in five-gallon cans. Jobbing houses are well stocked, but producers are not now offering any honey. Beeswax is in good demand, and producers are being paid 31 cts. per lb. Indianapolis, Feb. 17. **WALTER S. POWDER.**

DENVER.—The supply of strictly white comb honey is about exhausted, and prices are, as a consequence, higher than they otherwise would be, as the demand is light. We quote No. 1 white comb honey, per case of 24 sections, \$3.60; No. 1 light amber, \$3.35; No. 2, \$3.15. White extracted brings 9 cts.; light amber, 8; strained, 6½ to 7½. For clean yellow beeswax we pay 26 cts. in cash or 28 in trade, delivered here.

THE COLORADO HONEY-PRODUCERS' ASSO'N.
Denver, Feb. 19. **F. Rauchfuss, Manager.**

NEW YORK.—We have practically nothing new to report as to the condition of our market. Very little comb honey is arriving, and what little lots do come in find ready sale at prices ranging all the way from 14 to 17 for the white, and from 11 to 13 for dark and amber, according to quality and style of package. As to extracted honey, the market is decidedly quiet. Ever since the first of December the demand has been gradually decreasing; and with large stocks on hand prices have shown a downward tendency, and they are likely to decline still further. We quote nominally, California white sage at 9 cts.; Western white alfalfa, 8; Western light-amber alfalfa, 7 to 7½. In quantity lots even these prices would have to be shaded to effect sale. Beeswax is steady at 30 to 31 cts. per lb.

New York, Feb. 19. **HILDRETH & SEGELKEN.**

Continued on page 5.

Mr. New Beeman.—“Well, well, nailing up your beehives already? Aren't you rather early?”

Mr. Successful Beeman.—“Now, then, that is just where so many make their mistake: they wait until the last moment and then rush and buy anything they can get. You have often asked me the secret of my successful beekeeping. Well, listen! I order early, buy the **best beehives and supplies** on the market, nail them up, and then I am ready for the bees. All my supplies come from

THE FRED W. MUTH CO.

Cincinnati, Ohio.

Are You Ready?

The season is advancing; the long cold winter is about over. Bees will be breeding up soon for the early honey flow, and supplies should be on hand ready for instant service when the time comes.

We have a large and complete stock of Root's goods, and cars are coming in regularly. There is nothing in the line we can't furnish promptly, and we can save you time and money.

Our new catalog is ready for you. Get your supplies from us at factory prices and save on transportation charges.

We can reach any point in this locality very promptly, and can get the goods started to you the day your order is received.

You know that you can't get better goods than Root's, and we want the chance to show you that our service is worthy of your consideration. Let us know your needs and we will do the rest.

One per cent discount for March orders.

\$1.00 per year. When paid in advance: 2 years, \$1.50; 3 years, \$2.00; 5 years, \$3.00.

POSTAGE IS PREPAID by the publishers for all subscriptions in the United States, Hawaiian Islands, Philippine Islands, Guam, Porto Rico, Tutuila, Samoa, Shanghai, Canal Zone, Cuba, and Mexico. Canadian Postage is 30c per year. For all other countries in the Postal Union add 60c per year postage.

CHANGE OF ADDRESS. When a change of address is ordered, both the new and the old must be given. The notice should be sent two weeks before the change is to take effect.

DISCONTINUANCES. We give notice just before expiration, and further notice if the first is not heeded, before discontinuing. Subscribers are urged to renew promptly in order to avoid interruption in receipt of GLEANINGS; or, if unable to make payment at once, to advise us when they can do so, which will be considered as an order to continue. Any one wishing his subscription discontinued should so advise us upon receipt of expiration notice, and he will not be annoyed by further notices.

HOW TO REMIT. Remittances should be made by draft on New York, express-order or money-order, payable to order of The A. I. Root Company, Medina, Ohio. Currency should be sent by registered letter.

AGENTS. Representatives are wanted in every city and town in the country. A liberal commission will be paid to such as engage with us. References required.

FOREIGN SUBSCRIPTION AGENTS.

Foreign subscribers can save time and annoyance by placing their orders for GLEANINGS with any of the following authorized agents, at the prices shown:

We carry an up-to-date
line of

Bee-keepers' Supplies.

At this season of the year we give the usual customary early-order discounts.

If you can figure your wants now to buy early and get the benefit of lowest prices, don't fail to consult us.

We have a line of supplies that are just superb—nothing to fear as to quality. Send for our large catalog. It's free.

Beeswax taken in exchange for supplies or cash.

We are 75 miles west of St. Louis. Shipping facilities good.

JOHN NEBEL & SON SUPPLY CO.,
High Hill, Montg. Co., Mo.

Honey Markets, continued from page 2.

ZANESVILLE.—The honey market seems unusually quiet, though the local demand is never very brisk at this season. Though the crop was generally light the past season, the supply seems to keep pace with the demand. Still, the market is firm, about the same prices prevailing as last quoted—20 cents for best grades of comb in one or two case lots, and 11 to 12¢ for white extracted in 60-lb. cans, according to quantity. For wax of good quality, 29 cents in cash or 31 in exchange for bee supplies is offered producers.

Zanesville, O., Feb. 17.

E. W. PEIRCE.

LIVERPOOL.—There is a firm honey market here, and good business is passing. Chilian honey is retailed at last prices. Haitien has sold at \$6.00 to \$8.40 according to quality, and stocks of other descriptions have sold at different quotations as follows: Haitien, \$5.75 to \$7.20; Peruvian, \$3.84 to \$4.80; Chilian, \$5.52 to \$8.16; Jamaican, \$6.24 to \$7.68; Californian, \$9.60 to \$10.92. Good business is done in Chilian beeswax at \$34.48 to \$38.72 per cwt. Prices show 60 cts. advance for medium to low quality, of which there is a fair stock. Quotations for other descriptions are as follows: African, \$32.16 to \$34.48; American, \$36.72; West Indian, \$18.12 to \$36.28.

Liverpool, Feb. 5.

TAYLOR & CO.

CINCINNATI.—We see nothing exciting in the demand for honey. There seems to be plenty of it, of all kinds. We are selling fancy comb honey in 24-section glass-front cases at \$3.75 to \$4.00 a case. It is an imposition on the consumer to sell lower grades, and hereafter we shall absolutely refuse to buy it, for on each transaction we not only lose money but spoil the trade in good honey. For strictly fancy water-white table honey we are getting from 9 to 10 cts. per lb. in crates of two 60-lb. cans each; for amber honey in barrels, 7 to 8. For strictly choice bright yellow beeswax we are paying from 30 to 31 cts. delivered here, and for lower grades from 1 to 2 cts. per lb. less.

Cincinnati, Feb. 12. THE FRED W. MUTH CO.

(Organized 1870)

National Beekeepers' Association

Objects

The objects of this Association shall be to aid its members in the business of beekeeping; to help in the sale of their honey and beeswax; and to promote the interests of beekeepers in any other direction decided upon by the Board of Directors.

Send for illustrated catalog and prices. Address

W. F. & JNO. BARNES CO.,
545 Ruby St.,
ROCKFORD, ILLINOIS.

KANSAS CITY.—We are having a better demand for comb honey, but no change in prices. Receipts are light. We quote No. 1 white comb, 24-section cases, \$3.25; No. 2 ditto, \$3.00; No. 1 amber, \$3.00; No. 2 ditto, \$2.75; extracted white, per lb., 8¢ to 9¢; amber ditto, 8 to 8½¢; dark ditto, 5¢. Beeswax brings 25 to 28 cts. per lb.

C. C. CLEMONS BEE SUPPLY CO.

Kansas City, Feb. 20.

CINCINNATI.—The market on comb honey has fallen off somewhat, the only demand being for fancy white, which sells in a retail way at \$4.00; to jobbers at \$3.60 to \$3.75, according to quality. Extra white extracted in 60-lb. cans sold at 10 cts.; light-amber ditto, 8½¢; amber in barrels, 7 to 7½¢. Beeswax is in fair demand at \$33.00 per 100 lbs. The above are selling prices, not what we are paying.

C. H. W. WEBER & CO.

Cincinnati, Ohio, Feb. 19.

CHICAGO.—There was a fair movement in honey during the first part of February; but still the stocks are sufficient, if not more than enough to carry through the spring trade in comb, for the best grades of which we are still getting 17 to 18 cts. per lb. For any thing short of the fancy grades we get from 1 to 5 cts. per lb. less. Owing to the uncertainty of the crop in California because of the lack of moisture, the extracted is held steadily, although the trading is light. Prices range on white from 8 to 9¢; amber, 7 to 8. Beeswax brings 30 to 32.

Chicago, Feb. 17.

March Winds

Will soon give place to the proverbial April showers. In other words, spring is at hand.

Are you ready for it, Mr. Beeman? As in most localities the last two seasons were not the most favorable, you probably did not stock up heavily on supplies, and therefore find yourself short of hives, frames, sections, foundation, or other beekeeping accessories. Do not make the mistake of waiting till the last minute before sizing up your needs; for when once the bees get down to business, time is valuable and delays are costly. The March discount of 1 per cent is also worth considering, and on a large order is quite an item of saving.

Of course you will want the best goods the time-tested ROOT line; and, which is scarcely less important, prompt attention, careful packing, and quick delivery—in short, PEIRCE SERVICE.

If you are numbered with our hundreds of pleased customers, we await your annual call. If not, let us demonstrate our ability to please YOU. A large illustrated catalog and price list free if you ask for it.

EDMUND W. PEIRCE

136 West Main St., Zanesville, Ohio.

Baby Chicks

Nice big strong vigorous chicks is what we ship. Safe arrival guaranteed. Price 8 to 15 cts. each; 100,000 for sale this season. Catalog free.

JOS. A. BLUM & CO., Dept. 3, Chatfield, Ohio.

Superior Carniolan Queens

Write for our paper "Superiority of The Carniolan Bee" giving a brief description of these bees, their points of superiority, best methods of management, prices of our queens and other information. *It's free.*

ALBERT C. HANN, Scientific Queen Breeder,
Pittstown, New Jersey.

Why Not REAR Your Own QUEENS?

Doolittle's "Scientific Queen-Rearing" and the American Bee Journal for 1912—Both for Only **\$1.00**

Every Bee-keeper Should Have Both Book and Bee-Paper.

DOO LittLE'S "Scientific Queen-Rearing" book contains 126 pages, and is bound in leatherette with round corners. It tells in the clearest way possible just how the famous queen-breeder, Mr. G. M. Doolittle, rears the best of queen-bees in perfect accord with Nature's way. It is for both amateur and veteran in bee-keeping. As all know, Mr. Doolittle has spent some 40 years in rearing queens and producing honey. He has no superior as a queen-breeder. You can learn to rear fine queens by following his directions. Read up now before the bee season is here.

You will not regret having this book, which also gives his management of the bees for the production of honey.

The book, and the American Bee Journal for 1912, for only \$1.00, is certainly a *big bargain* for you. Send the \$1.00 now, and we will begin your subscription with January 1, 1912, and mail you the book. Sample copy of the Bee Journal free. Address

GEORGE W. YORK & CO.,

117 No. Jefferson St., Chicago, Ill.

Little Wonder, 2-inch, each, .50; mail, .65.

Honey-knife, .70; mail, .80.

Manufactured only by

Root's Beekeepers' Supplies

You may have a catalog of supplies; but if you haven't ours for 1912 you have missed something really worth while, and should get one at once. It is the largest and most complete ever published—more than a mere price list of supplies—a book that every beekeeper can read with pleasure and profit. Beginners will find answers to many perplexing questions, and advanced beekeepers timely suggestions that will save them money. Old customers are writing us frequently letters like the following:

Your catalog for 1912, designated ROOT'S BEEKEEPERS' SUPPLIES, is received, and I certainly thank you for this book. I have had your catalog on my desk for years, and have used Root's supplies all along. I note the enlargement and improvement in your new catalog, and notice many things I expect to add to my apiary. Crystal City, Texas. C. W. Cox.

Our catalog this season also gives a full and complete list of books and booklets which we can supply. Many of these booklets are free, which doesn't mean that they are not worth reading, but simply that we want you to be informed on the subjects of which they treat. Send for a catalog, and check those in which you are interested. You may live thousands of miles from here, and yet we can serve you almost as promptly as though you were near at hand; for, besides our branch offices, we have hundreds of large distributing houses located at convenient points all over the country, where large and complete stocks are constantly at the service of beekeepers. We will tell you from what point you can buy to the best advantage when you send for our catalog. Write to-day.

Quick Deliveries

Next to having the best goods made, there is nothing so important to the beekeeper in the busy season as to have goods delivered just when they are wanted most. It isn't always possible to ship goods from a distant factory and have them reach destination within a day or two, as is sometimes necessary during the height of the season, but with distributing-houses located in the large shipping-centers we are able to supply beekeepers everywhere, with no loss of time and with minimum transportation charges.

Send Your Hurry Orders

to any one of the offices listed below, and let us show you what we can do for you in point of service. Cars are going to these branches at the rate of two or three a week, so the stocks are new and fresh, and we usually have just what you want. If it isn't in stock at your nearest branch our manager will include your order with his specifications and you may have your goods come in the next car, thereby saving on transportation charges and getting the goods in better shape than you would by local freight.

Whatever Your Wants

we can supply you, and, of course, there is no question about the quality of our goods. The name "ROOT" in connection with bee-supplies means the best of every thing in this line. If you have never used our supplies you should make a trial of them this season. Once used, we are sure you will want no other.

Comb Foundation

is no better than the material that it is made from. Material is good only in so far as it will give service and satisfaction. Comb foundation made of the best beeswax will give neither service nor satisfaction if the wax has not been properly treated and sheeted before being run through the mills. There was a time, and not so long ago, when the clarifying of wax wasn't so general; and, in fact, it wasn't necessary to do so; for in those days the requirements weren't so exacting. But that time has passed. Full sheets of foundation are now being used entirely by producers of both comb and extracted honey.

The QUEEN MFG. CO. have gone one step further in preparing crude wax before it is finally passed through the rolls. QUEEN Foundation is made by a man who has spent the greater part of his life among the honey-bees, both in the South and North.

Why are some of the most extensive bee-keepers and supply mfrs. in the country placing their orders with us this year? Like Postum, there's a reason.

PUBLICATIONS ON BEE CULTURE

Please use coupon below, checking the numbers of items wanted.

The pamphlets and booklets listed below are of more than ordinary interest:

- 1 **My First Season's Experience with the Honey-bee.** By the "Spectator," of the *Outlook*, of New York. A ten-page leaflet detailing the experiences of this well-known writer. You will read the leaflet through before you lay it down. Free.
- 2 **The Bee-keeper and Fruit-grower.** A 15-page booklet giving actual facts regarding the value of bees to fruit, and showing how bee-keeping may be doubly profitable to the fruit-grower. Fruit-growers are realizing as never before the necessity of having honey-bees in close proximity to their blossoming fruit. Free.
- 3 **Bee-keeping for Sedentary Folk.** A 24-page leaflet reciting the actual experiences of an amateur bee-keeper, showing what equipment is best, points derived, etc. Free.
- 4 **Catalog of Bee-keepers' Supplies.** Our complete catalog will be mailed free to any address on request.
- 8 **Habits of the Honey-bee.** By Dr. E. F. Phillips. A somewhat scientific handling of the habits and anatomy of the bee. Price 10 cts.
- 9 **How to Keep Bees.** A book of 228 pages detailing in a most interesting manner the experience of a beginner in such a way as to help other beginners. Price \$1.00 postpaid.
- 10 **The A B C of Bee Culture.** A complete encyclopedia of bees, of 576 pages, fully illustrated, \$1.50 postpaid; half leather, \$2.
- 11 **Cleanings in Bee Culture.** A 64-page illustrated semi-monthly magazine, the leading exponent of bee culture in this country. Ten cents per issue, but to new subscribers we will furnish it six months for 25 cts.
- 12 **Back-yard Bee-keeping.** Six interesting lessons written in readable newspaper style. Many facts to encourage the "City Bound" man or woman with the back-to-the-land longing. Free.
- 13 **The Buckeye Bee-hive,** or the management of bees in double-walled hives. Of special interest to the amateur bee-keeper. A very complete booklet 84 pages. Illustrated throughout, 10 cts.

The coupon below may be used as an order sheet by properly checking the numbers of items wanted and adding your signature, and remittance, if required.

WITH OUR ADVERTISERS AND READERS

Seed and nursery advertisers have found GLEANINGS an unusually productive field for their use, hence we are usually able to secure the best of this advertising to put before our readers. If you haven't a reliable seedhouse in your immediate vicinity from which you buy your seeds and plants, we urge you to study the advertisements in the spring issues of GLEANINGS. Even if you do buy your seeds locally, we presume your dealer handles stock from some of the large producers, and you could not do better than to send for a catalog and study its interesting pages.

We never knew until a few days ago that there had really been produced a dependable fall bearing strawberry; but from the interesting printed matter sent us by an advertiser, it appears that we may now enjoy this delicious fruit almost throughout the summer and fall season, and there ought to be a good market also for those who are prepared to produce the berries commercially.

Several of the well-known seedhouses are offering new flower and garden varieties as well as improved and selected seeds and plants of the staples. It is usually safe to buy the well-advertised seeds, for the publicity given through the advertising and the printed matter sent out forces the producer to supply nothing but the best, even on his smallest orders; for by this means his reputation as a reliable dealer is established.

To the owners of homes we would urge the advisability of a liberal setting of fruit trees and fruit-yielding plants and bushes. There is a great deal of satisfaction in not having to depend upon the market for fresh fruits for your table; and an abundance of these and a good garden, no matter how small, will help materially to reduce the high cost of living.

Bees and fruit are so closely allied, because of the immense value of bees to fruit-blossoms, that nearly all fruit-growers now keep a few colonies of bees, and conversely all beekeepers could profitably raise some fruit, at least enough of each variety for their own table. Fruit bloom in the early spring does much to stimulate brood rearing so that the bees build up rapidly without artificial feeding for the larger harvest later. The fruit produced on trees where beehives are close by is always better and more abundant than where there are no bees; indeed, bees are an absolute necessity to insure the proper pollination of certain blossoms, and without their agency there is often no fruit. It doesn't cost much more in the first place to get the choicest and best varieties, and the results in a few years will more than justify the small additional expense for a right beginning. Horticulture advertisers are glad to send full information as to planting and care of young trees and bushes, the soil to which they are adapted, and the results that may reasonably be expected from their stock.

"If goods are wanted quick, send to Pouder."

(Twenty-third year.)

That Disappointed Look

Which comes over us after long delays in getting supplies and on opening the goods can be avoided. My new catalog paves the way. It is the most complete catalog that I have ever sent out, and I should like to place one in your hands for the asking.

Many of you are now familiar with my shipping facilities, and you know they can not be excelled. The same high quality of goods will ever be maintained here; and if anything could be better I would have it. I have had many opportunities to load up with cheaper goods; but cheaper goods would mean inferior quality and workmanship, and the patrons of this house are entitled to just what they expect when they intrust me with their valued orders—the very best that can be produced—in plain English, **ROOT QUALITY.**

If you are a beginner, or if you have been disappointed in getting your supplies, it will be to your interest to give this house a trial. Getting beginners started right is one of my hobbies, and it is one of my pleasures to answer my letters promptly. If you require only a catalog, let me show you how quickly I can have it in your hands.

WALTER S. POUDER, Indianapolis. *Dear Sir:*—I received my bee supplies all right, and I thank you for your promptness in filling my order. I always find your goods just as represented, or better; and with this I am sending for a few more hives.

Decker, Ind.

Yours truly,

JOHN GRAY.

If your neighbors demand more honey than your bees have supplied, write me for sample and prices. Since you keep bees you should always have some honey on hand; and if you keep up the quality the demand will constantly increase. I retail finest extracted honey at 15 cents per pound where patron furnishes the container, or I supply a paper honey-jar free. In quantities of two cans or more I get 11 cents for same quality of honey; but if I had the bees I would ask higher prices, for the reason that the public seems to prefer to get their honey from the man who has the bees, and I still think that the producer has much to do with increasing the demand and the price for honey.

Save your beeswax and ship it here at any time. Just now I could promise you 31 cents per pound for it.

Write me a line.

WALTER S. POUDER, Indianapolis, Ind.

859 Massachusetts Ave.

Sharpen your tools 30 days Free
on this new, shaft-drive

LUTHER "HUMMER"

Tool Grinder

Foot and Engine Power

Does the toughest job of grinding easily in a few minutes—your tools will be always sharp, making work go faster and easier. You can prove by actual use of this machine for 30 days' Free Trial. If you are not satisfied that it saves money, time, and tools, send it back at my expense. Built all of steel and iron—no chains—shaft drive like automobile—dust-proof ball bearings—gravity lubrication—5 years guarantee—runs 4000 revolutions by foot power—easy as sewing machine—absolutely revolutionizes tool sharpening.

Return
this
Coupon

14 Machines in One

Farm outfit, and Mechanic's outfit each include 14 attachments and accessories providing for every grinding or sharpening need for farmers, carpenters, mechanics, shops, etc. Tool rests and attachments enable 14-year-old boy to do difficult sharpening such as twist drills, gumming saws, grinding discs, sickles, etc.

Extra Attachments

With the extra attachments the "Hummer" can be used as a turning lathe, force-feed drill, jig and circle saw, blacksmith forge—16 extra attachments in all which equip your shop at low cost. If you bought machines to do the work these attachments do, the cost would be many times greater.

Dimo-Grit—the wheel for steel—25 times faster than grindstone—10 times more efficient than emery—will not draw temper

Dimo-Grit the new artificial diamond abrasive, is a twin product of carborundum. Dimo-Grit is especially suitable for steel, leaving the smoothest, keenest edge—cuts hardest steel as emery does soft copper. It peels steel away in tiny shavings instead of wearing it away like grindstone or emery wheels—never glazes—no heat developed—no need of hard pressing or water cooling—no danger of drawing temper. South African diamonds could cut steel no quicker—outwears any number of emery wheels and grindstones. Carborundum wheels furnished if wanted.

Return this Coupon for 30 Days' Free Trial Offer

You do not put yourself under any obligations by returning this coupon. We will send 40-page Free Book reprinting the story of artificial diamond abrasives as printed in McClure's Magazine, and describing the "Hummer" grinder and attachments. Then you can select an outfit for 30 days' absolutely free trial.

14 Machines in One 1—Fine Dimo-Grit wheel, 2—Coarse Dimo-Grit wheel, 3—Universal tool rest, 4—Chisel and plane bit guide, 5—Dimo-Grit razor hone, 6—Dimo-Grit set stone, 7—Dimo-Grit saw gummer, 8—Felt polishing wheel, 9—Medium Dimo-Grit wheel, 10—Cloth buffing wheel, 11—Dimo-Grit oil stone, 12—Dimo-Grit pocket hone, 13M—Plane bit honing attachment, 14—Twist drill sharpening attachment. Farm outfit has sickle and disc sharpening attachment.

Isn't it better to let your tools do the drudging rather than you? Isn't it commonsense for a farmer or gardener to work with tools that do the work of 3 to 6 men—do it better and get bigger crops?

Planet Jr

Two million farmers using Planet Jrs the world over testify that they save drudging. A practical farmer and manufacturer with over 35 years' experience makes them.

No. 10 Planet Jr Horse Hoe, Cultivator and Hiller is new and already a favorite. Finishes, at one passage, rows up to 3½ feet apart even if they vary in width. Capital level cultivator, hiller, plow, furrower. Can be fitted with vine-turner attachment.

No. 38 Planet Jr Single Wheel Disc Hoe, Cultivator, and Plow gives universal satisfaction, especially in peat lands. Has steel frame, carries 3 discs on each side, pair of efficient 3-prong teeth, plow, and leaf lifter.

FREE! A 64-page illustrated farm and garden book!
It's yours for the asking! And it contains 64 pages of invaluable cultivation advice. You can't afford to miss it!

PAINT WITHOUT OIL

Remarkable Discovery that Cuts Down the Cost of Paint Seventy-five Per Cent.

A Free Trial Package is Mailed to Every One Who Writes.

A. L. Rice, a prominent manufacturer of Adams, N. Y., has discovered a process of making a new kind of paint without the use of oil. He calls it Powdrpaint. It comes in the form of a dry powder and all that is required is cold water to make a paint weather-proof, fire-proof, and as durable as oil paint. It adheres to any surface, wood, stone, or brick, spreads and looks like oil paint, and costs about one-fourth as much.

Write to Mr. A. L. Rice, Manufacturer, 8 North St., Adams, N. Y., and he will send you a free trial package, also color-card and full information showing you how you can save a good many dollars. Write to-day.

THE BEST LIGHT

makes and burns its own gas. Costs 2c. a week to operate. No dirt, grease nor odor. A pure white light, more brilliant than electricity or acetylene. None other so cheap or effective. Agents wanted. Write for catalogue and prices.

A practical car for busy bee-keepers

Here's just the car you want for those quick business trips—and to get the most enjoyment out of the hour or so that you and your family may have after the work for the day is done.

The Cartercar is most reliable because of the extremely simple and strong construction. No matter whether rain or shine it is always ready for the word "Go."

When you are in a hurry the Cartercar can be depended on to get you to your destination in double quick time. If it's just pleasure you seek, the car rolls along easily and noiselessly.

The friction transmission of the Cartercar makes it the most reliable yet the most enjoyable of all automobiles. This transmission is so simple that it does

not get out of order—and it eliminates all jerks and jars in starting.

There are any number of speeds at your command. All are easily and noiselessly controlled by one lever. The farther forward the lever is pushed the faster the speed. When the lever is pulled back the speed is reversed.

The chain-in-oil drive is noiseless. The case is dust and grit tight and permits the chain to operate in oil, thus eliminating almost all wear on the chain.

The bee-keeper who drives a Cartercar has more time—can do more work—make more money—and knows the real joy of living.

Let us send you valuable information concerning these excellent automobiles.

Plant the quality grape

CATAWBA - CONCORD

The grape for everybody everywhere

The Catawba-Concord is a cross between the Catawba and the ever-popular Concord, so scientifically made that the result is a grape possessing the merits of both varieties, with the defects of neither.

Equal in quality to the finest hot-house grapes—as easily grown as the Concord.

Unlike the Catawba, it can be grown successfully in practically any location, for its foliage is not subject to downy mildew, nor its fruit to black-rot. Unlike the Catawba, it ripens early—in fact, slightly earlier than the Concord.

Its bright wine-red color, its unequalled keeping and shipping qualities make it the best market grape ever introduced.

No grape is more prolific, none has successfully withstood more severe tests than this has been subjected to for ten years past.—I proved its superiority on every point before offering a single vine for sale. Awarded first prize wherever shown, including a

Certificate of Merit from the American Institute of the City of New York.

Send for large 80-page illustrated catalog. Gives full details of this remarkable grape; also of the best Raspberries, Blackberries, Strawberries, Currants, Gooseberries, Garden Roots, Hardy Perennial Plants, Shrubs, Evergreen Trees, Hedge Plants, Vines, Roses, etc., and tells how to plant and grow them. **Free to Everybody.** Write TO-DAY.

11 The Swarm, Maeterlinck.....	1 20
7 The Bee-master of Warrilow, Edwards.....	50
10 Lore of the Honey-bee.....	1 90

Alexander's Writings on Practical Bee Culture. By the late E. W. Alexander, who conducted the largest apiary in the United States. A wonderfully interesting discussion of bee-keeping in its broadest phases. Any one can understand it; 35 chapters, 95 pages. Paper bound, 50 cts. postpaid.

A Year's Work in an Out-apiary..... By G. M. Doolittle. Packed full of most valuable information ever given to bee-keepers. A practical and interesting book by a very successful apiarist. Sale has reached nearly 5000 copies; 60 pages, paper bound; 50 cts. postpaid.

The Townsend Bee Book..... By E. D. Townsend. Written by one of the most progressive, successful, and extensive bee-keepers in the U. S., this book has been in great demand from the day of its announcement. Tells how to make a start with bees, and will greatly benefit beginners and experienced bee-keepers; 90 pages, paper bound, 50 cts. postpaid.

Bee-keeping by Twentieth-century Methods, by J. E. Hand..... 50 The author shows not only how to control swarming, but how to treat foul brood without shaking, and discusses in a comprehensive way many other down-to-date apicultural problems and their solutions.

In combination with Gleanings in Bee Culture for one year any one of these books may be had for the price of Gleanings alone, \$1. Foreign postage 60 cts. extra. Canadian postage 30 cts. extra.

MISCELLANEOUS HAND-BOOKS.

5 A B C of Carp Culture, by Geo. Finley.....	25
7 A B C of Potato Culture, Terry** New edition, revised & enlarged; paper, 50c; cloth, 75c, mail 85c.	

This is T. B. Terry's first and most masterly work. It has really made a revolution in potato-growing, and has been reprinted in several foreign languages. By getting the ground in proper condition to grow great crops of clover, and turning this under, Terry succeeded, not only in getting more potatoes, but even better ones, and in producing them at less expense also, than by any plan or system be-

Postage.] [Price without postage. fore the time he began his experiments in 1885. The book has already passed through three editions of many thousands. It not only includes potato-growing in the United States, but in Bermuda, the Island of Jersey, and other warmer parts of the world where "new potatoes" are raised for the express purpose of getting the high prices in the cities during January, February, and March. The book also gives special attention to the different and best methods for preserving and keeping seed potatoes in the very best condition to plant in all these different localities.

5 | A B C of Strawberry Culture,** by T. B. Terry.. New edition, revised and enlarged; paper, 45c; cloth, 68c; by mail, 75c.

After Terry's potato-book had obtained such a kind reception from farmers, market-gardeners, and others, he was induced to give his plan of growing strawberries, as he did potatoes, by plowing under great crops of clover, and, like the potato-book, his writings gave a new impetus to strawberry-growing; in fact, some of his pupils declare that, aside from the picking, they can grow strawberries almost as cheaply per bushel as potatoes. By following Terry's teachings, thousands of people have not only been able to give their families but the whole wide world better strawberries, and more of them, than they ever saw before.

6 Asparagus Culture.....	40
6 Alfalfa Culture.....	40
8 Barn Plans and Out-buildings*.....	90
2 Celery for Profit, by T. Greiner**.....	25

The first really full and complete book on celery culture, at a moderate price, that we have had. It is full of pictures, and the whole thing is made so plain that a schoolboy ought to be able to grow paying crops at once without any assistance except from the book.

10 | Fruit Harvesting, Storing, Marketing, etc..... 75 It has been well said that it is an easier matter to grow stuff than to sell it at a proper price after it is grown; and many men fail, not because they are inexperienced in getting a crop, but because they do not know how to sell their crops to the best advantage. This is the first book of the kind we have had as an aid in selling. It not only tells all about picking, sorting, and packing, but gives all the best methods for storing for one or two days or a longer time. It also tells about evaporating and canning when there is a glut in the market. It discusses fruit packages and commission dealers, and even takes in cold storage. It is a new book of 250 pages, full of illustrations. Publisher's price, \$1.00.

| Farming with Green Manures, postpaid**..... 90 This book was written several years ago; but since competent labor has got to be so expensive, and hard to get, many farmers are beginning to find they can turn under various green crops cheaper than to buy stable manure, and haul and spread it—cheaper, in fact, than they can buy fertilizers. This book mentions almost all plants used for plowing under, and gives the value compared with stable manure. Some of the claims seem extravagant, but we are at present getting good crops, and keeping up the fertility, by a similar treatment, on our ten-acre farm.

7 Farm, Gardening, and Seed-growing**.....	90
10 Fuller's Grape Culturist**.....	1 15
5 Garden and Farm Topics, Henderson**.....	60

12 | Gardening for Pleasure, Henderson*..... 1 10 While "Gardening for Profit" is written with a view of making gardening pay, it touches a good deal on the pleasure part, and "Gardening for Pleasure" takes up this matter of beautifying your homes and improving your grounds, without the special point in view of making money out of it. I think most of you will need this if you get "Gardening for Profit." This work has 246 pages and 134 illustrations. (Retail price \$2.00.)

12 | Gardening for Profit**..... 1 10 This is a late revision of Peter Henderson's celebrated work. Nothing that has ever before been put in print has done so much toward making market-gardening a science and a fascinating industry. Peter Henderson stands at the head, without question, although we have many other books on these rural employments. If you can get one book, let it be the above. It has 376 pages and 138 cuts. (Retail price \$2.00.)

8 | Gardening for Young and Old, Harris**..... 90 This is Joseph Harris' best and happiest effort. Although it goes over the same ground occupied by Peter

Postage.] [Price without postage.

Henderson, it particularly emphasizes thorough cultivation of the soil in preparing your ground; and this matter of adapting it to young people as well as old is brought out in a most happy vein. If your children have any sort of fancy for gardening it will pay you to make them a present of this book. It has 187 pages and 46 engravings.

3 | Grasses and Clovers, with Notes on Forage Plants..... 20

This is by Henry A. Dreer, author of the book "Vegetables Under Glass" that has had such a large sale of late. This little book tells how six tons of grass has been grown to the acre, and gives much other valuable matter.

10 | Greenhouse Construction, by Prof. Taft... 15**

This book is of recent publication, and is as full and complete in regard to the building of all glass structures as is the next book in regard to their management. Any one who builds even a small structure for plant-growing under glass will save the value of the book by reading it carefully.

12 | Greenhouse Management, by Prof. Taft..... 15**

This book is a companion to Greenhouse Construction. It is clear up to the times, contains 400 pages and a great lot of beautiful half-tone engravings. A large part of it is devoted to growing vegetables under glass, especially Grand Rapids lettuce, as well as fruits and flowers. The publisher's price is \$1.50; but as we bought quite a lot of them we can make a special price as above.

5 | Gregory on Cabbages, paper*..... 20**5 | Gregory on Squashes, paper*..... 20****5 | Gregory on Onions, paper*..... 20**

The above three books, by our friend Gregory, are all valuable. The book on squashes especially is good reading for almost anybody, whether they raise squashes or not. It strikes at the very foundation of success in almost any kind of business.

| Handbook for Lumbermen..... 05**5 | Home Pork-making; 125 pages, illustrated..... 40**

I think it will pay well for everybody who keeps a pig to have this book. It tells all about the care of the pig, with lots of pictures describing cheap pens, appliances, all about butchering, the latest and most approved short cuts; all about making the pickle, barreling the meat, fixing a smoke-house (from the cheapest barrel up to the most approved arrangement); all about pig-troughs; how to keep them clean with little labor; recipes for cooking pork in every imaginable way, etc. Publisher's price is 50 cents, ours as above.

15 | How to Make the Garden Pay..... 1 35**

By T. Greiner. Those who are interested in hotbeds, cold-frames, cold green-houses, hothouses, or glass structures of any kind for the growth of plants, can not afford to be without the book. Publisher's price \$2.00.

10 | How to Keep Well and Live Long..... 90

The above book by T. B. Terry is, in my opinion, destined to relieve more pain, sickness, and death than any other book in the whole world that has ever come to my knowledge. This is pretty strong language, I admit; but since Mr. Terry commenced, years ago, to urge the importance of pure air, pure water, and a simple diet of good simple food in moderate quantities, the whole wide world, doctors included, seems to be gradually falling in with him. Of course, other good and wise men commenced a similar crusade for better health long before Terry did; but he seems to have a happy faculty of getting hold of people and keeping their attention. After you once start in with the book you will be pretty sure to read it to the end, and you will ever after be a better and a happier man or woman for having read it. We have a special low price for clubbing with GLEANINGS—that is, both for \$1.50. If you have already paid for GLEANINGS a year or more in advance you can have the book for 75 cents postpaid. Since it first came out, only a short time ago, we have sold nearly 1000 copies.

3 | Maple Sugar and the Sugar-bush..... 25****5 | Manures; How to Make and How to Use****Them; in paper covers..... 30****6 | The same in cloth covers..... 65****6 | Nut Culturist, postpaid..... 1 25****3 | Onions for Profit**..... 40**

Fully up to the times, and includes both the old onion culture and the new method. The book is fully illustrated, and written with all the enthusiasm and

Even if one is not particularly interested in the busi-

Postage.] [Price without postage

ness, almost any person who picks up Greiner's books will like to read them through.

8 | Practical Floriculture, Henderson*..... 1 10**10 | Small-Fruit Culturist, Fuller..... 75****2 | Experiments in Farming, by Waldo F. Brown. 08**

This little book ought to be worth its cost for what is said on each of the four different subjects; and the chapter on cement floors may be worth many dollars to anybody who has to use cement for floors, walks, or anything else. In fact, if you follow the exceedingly plain directions you may save several dollars on one single job; and not only that, get a better cement floor than the average mason will make.

10 | Our Farming, by T. B. Terry..... 75****| Same, paper cover, postpaid..... 50**

In which he tells "how we have made a run-down farm bring both profit and pleasure."

If ordered by express or freight with other goods, 10c less.

10 | Talks on Manures*..... 1 35

By Joseph Harris. Written conversational style, which makes it very interesting reading. It covers the subject very completely; contains numerous analyses of manures and comparative tables. The use of technical language is avoided, which makes the book of greatest value to the practical farmer. A book of 366 pages, nicely bound in cloth.

10 | The Dollar Hen..... 90

The above book will be clubbed with GLEANINGS for one year at \$1.50; or if you have already subscribed a year or more in advance you can have the book postpaid for 75 cents.

My opinion is, that "The Dollar Hen" is not only one of the best books on poultry that we have at the present time, but it is worth nearly as much as a dozen other books. Perhaps this is extreme, but we have very few books that are strictly up-to-date, and still fewer that pitch right into the superstitions and humbugs now scattered all through our poultry books and journals.

5 | The New Rhubarb Culture*..... 40

Whenever apples are worth a dollar a bushel or more, winter-grown rhubarb should pay big. It does not require an expensive house nor costly appliances. Any sort of cellar where it will not freeze is all right for it; and the small amount of heat necessary to force the rhubarb costs very little. The book is nicely bound in cloth, full of illustrations, mostly photos from real work, 130 pages. Every market-gardener should have this book, for the lessons taught indirectly, in regard to forcing other crops besides rhubarb. Publisher's price 50c.

5 | Tile Drainage, by W. I. Chamberlain..... 35

Fully illustrated, containing every thing of importance clear up to the present date.

The single chapter on digging ditches, with the illustrations given by Prof. Chamberlain, should alone make the book worth what it costs, to every one who has occasion to lay ten rods or more of tile. There is as much science in digging as in doing almost any thing else; and by following the plan directed in the book, one man will often do as much as two men without this knowledge.

5 | Tomato Culture..... 35

In three parts. Part first.—By J. W. Day, of Crystal Springs, Miss., treats of tomato culture in the South, with some remarks by A. I. Root, adapting it to the North. Part second.—By D. Cummins, of Conneaut, O., treats of tomato culture especially for canning-factories. Part third.—By A. I. Root, treats of plant-growing for market, and high-pressure gardening in general.

3 | Winter Care of Horses and Cattle..... 25

This is friend Terry's second book in regard to farm matters; but it is so intimately connected with his potato-book that it reads almost like a sequel to it. If you have only a horse or a cow, I think it will pay you to invest in a book. It has 44 pages and 4 cuts.

8 | What to Do, and How to be Happy while Do-**ing It..... 65**

The above book, by A. I. Root, is a compilation of papers published in *Gleanings in Bee Culture*, in 1886, '7, and '8. It is intended to solve the problem of finding occupation for those scattered over our land out of employment. The suggestions are principally about finding employment about your own homes. The book is mainly upon market-gardening, fruit-culture, poultry-raising, etc. Illustrated, 188 pages, cloth.

8 | Same, paper covers..... 40

THE A. I. ROOT CO., Medina, Ohio.

Michigan Boulevard & 22nd St.

Chicago, Ill.

The Lexington is located just outside the congested business district, yet within ten minutes' ride on two electric lines which pass the hotel.

We have three of the best Cafes in the City, and prices are reasonable.

Write us for booklet or to make reservation.

M. & M. Hotel Company, Proprietors,
T. V. Strain, Manager.

Special Notices

By OUR BUSINESS MANAGER

We have about two tons of choice Michigan and New York State amber extracted honey in five-gallon cans. The largest part of the honey was gathered from clover, but we presume many of the producers were busy with other work so did not get it extracted until after the fall flows came on, so there is enough dark honey mixed with this to grade it amber. We offer it put up in the original packages of two five-gallon cans to the case, at 8¢ cents per lb., delivered in good condition on board the cars at Medina. We seldom have a lot of honey as good as the above at such a low price. In ordering mention lot No. 107.

MAPLE SUGAR AND SYRUP.

Owing to the heavy demand last year for our Ohio rock-maple syrup and sugar we have decided to book orders in advance of the crop at the following prices:

Single one-gallon can or one case of six one-gallon cans, at \$1.25 per gallon.

Two to ten cases of six one-gallon cans to case, at \$1.15 per gallon.

Larger quantities, 75 to 100 gallons, at \$1.10 per gallon.

For a number of years we have not been able to get sufficient quantities of maple sugar to meet the demand. We hope this year to obtain a larger supply. We quote as follows:

1 to 25 lbs. best rock-maple sugar at 15 cts. per lb.

26 to 50 lbs. ditto at 14 cts.

50 to 250 lbs. ditto at 13 cts.

250 to 1000 lbs. ditto at 12 cts.

Our inspection of sugar and syrup as they come in from the producers will be more rigid than ever, as our requirements are based upon U. S. standard regarding the color, flavor, and purity of both sugar and syrup. Let us book your order now, as the first run is considered by all to be the best.

SECOND-HAND FOUNDATION-MILLS.

We have to offer the following list of foundation-machines which have been used, but are in fair condition. In many cases they will answer as well as a new machine where you have only a moderate output. Send for samples of any mill in the list which may interest you.

No. 0121, 2½x10-inch heavy hex. brood mill. An old-style Dunham machine without cam adjustment; in rather poor condition. Price \$8.00.

No. 0129, 2x10 round cell medium-brood mill, old-style frame, in good condition. Price \$14.00.

No. 0139, 2½x6 hexagonal thin-super mill, in very good condition. Price \$14.00.

No. 0140, 2½x6 hexagonal thin-super mill, in very good condition. Price \$14.00.

No. 0151, 2½x6 hexagonal cell, extra thin-super mill, one bad cell, otherwise in good condition. Price \$12.00.

No. 0152, 2½x6 hexagonal thin-super mill, extra good for regular-width super foundation. Price \$12.00.

No. 0153, 2½x6 hexagonal thin-super mill. No. 0154, ditto. Both in very good condition. Price \$14.00 each.

No. 0155, 2x10 round cell, medium-brood mill in old-style frame; fair condition. Price \$12.00.

No. 0156, 2½x6 extra thin-super mill, fair. Price \$10.00.

No. 0157, 2½x6 thin-super mill, in good condition. Price \$12.00.

No. 0159, 2 x 10 round-cell medium-brood mill in good condition. Price \$15.00.

No. 0160, 2½ x 6 hexagonal thin-super mill in good condition. Price \$12.00.

No. 0164, 2½ x 6 hexagonal thin-super mill in fair condition. Price \$10.00.

No. 0165, 2½ x 6 hexagonal extra-thin-super mill in fair condition. Price \$11.00.

No. 0166, 2½ x 6 hexagonal thin-super mill in extra good condition. Price \$14.00.

No. 0167, 2½ x 6 hexagonal extra-thin-super mill in fair condition. Price \$11.00.

No. 0168, 2½ x 6 hexagonal thin-super mill in good condition. Price \$12.00.

No. 0169, 2½ x 6 hexagonal extra-thin-super mill in extra good condition. Price \$15.00.

No. 0147, 2½ x 6 thin-super mill in extra good condition. Price \$15.00.

No. 0163, 2½ x 10 light-brood mill in good condition. Price \$17.00.

No. 0170, 2½ x 6 thin-super mill in very good condition. Price \$15.00.

No. 0172, 2½ x 6 thin-super mill in fair condition. Price \$11.00.

No. 0173, 2½ x 6 thin-super mill—defect near end of roll; extra good condition for four-inch foundation. Price \$12.00.

No. 0175, 2½ x 10 light-brood mill in good condition. Price \$16.00.

No. 0176, 2½ x 6 extra thin-super mill in fair condition. Price \$12.00.

Special Notices

By A. I. Root

EXPOSING FRAUDS, HUMBUGS, SWINDLES, INJUSTICE, AND EXTORTION.

So far as I can discover, no other periodical has ever done so much to protect the innocent hard-working people from the designs of rascals as has the old and well-known *Rural New-Yorker*, and this year to every subscriber they send a most valuable little book giving a history of the fakes that have been more or less successfully worked during years past. Our readers are well aware that GLEANINGS has done something in this line, and it has many times gladdened my heart to have the *Rural* back up and follow up on the trail we have started. Not only this, but the *Rural*, by threats of exposure, has, hundreds of times, succeeded in making not only individuals but even railroad and express companies hunt up the goods or pay for them where the efforts of the sufferer standing alone by himself would amount to nothing. Send a dollar for the *Rural* a year, and get posted in regard to the tricks that have been worked, and it may save you not only ten dollars but possibly a hundred in years to come. Not only that, you will be backing up truth, honesty, and justice, and encouraging those who, I fear, have not had the endorsement they deserve.

MR. BEE-KEEPER!

**Tear This Out and . . .
Hand it to Your Neighbor**

BEES AND SPRAY

Do not forget that the honey-bees are the fruit-grower's friends. The bees are ever busy fertilizing the blossoms of your fruit, plants, vines, and trees. If you spray your trees when they are in blossom you will destroy many of these friendly bees. Orchards should not be sprayed when in full blossom for other reasons. Wait until the blossom falls, but spray immediately after the blossom fades and falls. Then the fruit points upward with the calyx end uppermost, so that the poisonous spray gets in the calyx. Later the young fruit bends over so that the poison can not get into the calyx so easily. There is the right time to spray, and there is the right time to do almost anything.

—CHAS. A. GREEN, Proprietor of *Green's Nurseries*, Rochester, New York, and Publisher *Green's Fruit-Grower*.

**THE A. I. ROOT COMPANY
MEDINA, OHIO**

Southwestern Beekeepers!

At no other point in this part of the bee-keeping world can you get the combination of prompt and efficient service and excellence in **QUALITY** of goods that we can give you from

San Antonio.

The freight and express facilities of our city are almost unlimited. Shipments may leave at once over the fastest routes, and prompt delivery is assured. Our Mr. Udo Toepperwein is, perhaps, the best authority on bee-keeping subjects in this part of the country. Not many years ago he was a practical beekeeper on a large farm, and his early experience in this line enables him to understand the needs of beekeepers better than the ordinary supply dealer. He knows supplies, both from the standpoint of a user and a dealer, and you may depend upon his judgment to give you just what you need.

Our stocks are now complete for early orders; and with the prospect there is for a good season, delays are dangerous. All our goods are new and fresh, of Root manufacture, which is a guarantee of the quality. We sell in original factory packages at factory prices, and offer the manufacturer's discount of one per cent for March cash orders.

Weed Process Comb Foundation.

Our trade in this product has increased to such an extent that we have been obliged to install our own plant to make this. We can use all your wax at current prices, and can furnish you foundation which we are sure will please you, both in quality and price.

Honey-cans.

We have our usual large stock, and can fill orders the day they are received. Try us this season and be satisfied.

Our catalog will be sent on request, also delivered, prices quoted on any list submitted. You can save money by ordering from us. We have paid the freight to San Antonio, and our stock is at your service. Whether your order is large or small we shall be glad to handle it. Give us a trial and we will do the rest.

Queens.

We are prepared to supply queens from one of the best breeders in Texas. We especially solicit orders in quantity lots on which we will give wholesale prices.

No-drip Shipping Cases.

A big stock of these on hand at low prices. Write for particulars. It will pay you to get our prices.

Toepperwein & Mayfield,

Corner Nolan and Cherry Sts.

San Antonio, Texas.

COME SOUTH

—TO—

America's Market Gardens

Be healthy, happy and independent, under clear skies in a progressive country, raising GRAPE FRUIT, ORANGES, ETC. Fruits and vegetables are grown to perfection in the Six Southern States (Virginia, North Carolina, South Carolina, Georgia, Florida and Alabama,) traversed by the Seaboard Air Line Railway,

FROM THE PEANUT FIELDS OF VIRGINIA TO THE ORANGE GROVES OF FLORIDA

Fertile land is now cheap—\$10.00 per acre and up, but will soon advance. Every inducement is offered to the man of limited means. Farms can be bought on easy terms. Low freight rates—quick transportation to the big markets. Good roads, schools and churches. Plenty of water—ideal climate the year 'round, no extreme heat or cold—high class labor. We want more good people, we have a big country full of natural advantages, close to large towns—not in a wilderness. An investment in Real Estate here is absolutely safe. Ten acres will make you independent. Hundreds of satisfied settlers are becoming wealthy, and enjoying life. You can do the same. **In the land of Manatee on the West Coast of FLORIDA you can raise two to three crops a year—net \$500 to \$1000 an acre.**

Build a Home for your Family NOW. Give them the many advantages which were denied you. For handsome booklet and literature, write at once to:

"The Corning Egg Farm Book By Corning Himself."

Not a Dream of Some Would-be Successful Poultryman; No Theoretical Possibilities; But Actual Accomplished Facts.

The Straight-Forward Story of the Building up, in Five and a Half Years, of the Greatest Egg Farm in the World, from a start with only 30 Hens.

The Corning Method developed the Strain of Single Comb White Leghorns *which cannot be surpassed.*

The Corning Egg Farm Book tells in detail everything about this Farm, from the purchase of the acreage, at Bound Brook, N. J., in 1906, right up to date.

FEEDING FOR EGGS

The marvelous discoveries and far-reaching developments in feeding for eggs, which have been made on the Corning Egg Farm during the last two years, can be found only in The Corning Egg Farm Book, because no one has gone into feeding for eggs so thoroughly and so successfully as Corning.

It matters not how successful you may be, the possession of the knowledge you will obtain by studying The Corning Egg Farm Book will enable you to reap a greater profit, year after year, than ever before.

The Corning Method brings success to the man who keeps a few hens, in the back yard, just as surely as to the man who keeps hens by the hundreds or thousands.

The Corning Egg Farm Has Now **Surpassed \$6.41 Per Hen Per Year**

and The Corning Egg Farm Book by Corning Himself tells how you can do the same.

How to build the Corning Houses, detailed drawings, lists of required materials, with full instructions, are in the Book.

Remember, Corning designed and built all these houses. No builder, architect, or contractor, could give you such plans, as only Corning knows.

The chapter covering the handling of birds on Colony Range will help many a man to put more pullets into his laying house than he has ever done before.

Mortality in raising chicks can be materially lessened by following the instructions laid down in The Corning Egg Farm Book.

This book is a real book, not a cheap paper pamphlet. It is bound in rich blue cloth, stamped in gold, with the Corning Strain Utility Cockerel in colors. 216 pages of clear type on fine paper. A Corning Cockerel, painted by one of New York's foremost artists, in life colors, is the Frontispiece. The pictures, 35 in number, were taken by a photographer of reputation. They are half-tones, full page and larger. 39 pen-and-ink drawings cover plans of the buildings, etc.

No one else can offer you the equivalent of The Corning Egg Farm Book at any price, for the pertinent reason that the knowledge given in plain language, understandable and usable by any one, has been thought out, worked out, and perfected by the Cornings. No experiments are left for others. The following of the Corning Method, as told in this Book, means assured success and profit. Price \$1.00, postpaid, to any address.

THE CORNING EGG FARM, BOUND BROOK, N. J.

Gleanings in Bee Culture

VOL. XL. MARCH 15, 1912. NO. 6

T. B. TERRY
In His Sixty-seventh Year

I am Still Gaining

That is what T. B. Terry says to-day, when he is 67 years old, after being so broken in health at 40 years of age that all the doctors who saw him and tried to help him gave him up to die. But Mr. Terry got well by working out his own cure. He tells all about it in his great health book.

"How to Keep Well and Live Long"

There is no other book like it in the world. You don't need to know medical words or medicines to understand it. It is written clearly and simply, and has back of it the personal experience which tried and proved every step of the way to a long and healthy life. You can follow the same way. The book is only one year old, but over 5150 copies of it, to date, are making men and women healthier and happier because they have read and followed the teachings of its pages.

READ BELOW what One Man Has to Say about THIS GREAT BOOK:

I enclose check for \$3.55, for which please send me five more copies of Mr. Terry's book. This makes 75 copies to date that I have sold, or, rather, distributed, all but these last five, and will eventually make it 100. Have given away quite a good many, and keep from two to four loaned out all the time. Gave my pastor two copies for the same purpose. Do not desire to make any clear profit on the sales; give to libraries and wherever I think they will do any good. The book has done me a great deal of good. I consider it a good thing and believe in passing a good thing along. We are not to blame if our light is small and not very bright, but we are to blame if we hide that light under a bushel. Before the book was issued I had interested a friend, a retired physician, in "Health Hints." He wanted a copy of the book as soon as out, and has bought in all 15 copies from me. He is an enthusiastic admirer of Mr. Terry—so much so that he got me to go with him to Ohio to see him last winter, and on our way home he said: "We found everything just as the book said, except Mr. Terry's picture; that does not do him half justice," and I say amen to that. The picture makes him look too old and half asleep. Would like to see a better one in the new edition. I gave a copy of the book to a near relative, an active practicing physician, who read it carefully and critically, and pronounced it

good. He takes The Practical Farmer and reads it every week. I asked him last week what he thought of Terry's teachings now. He said: "Good common sense, and we doctors need to learn a whole lot of common sense." My friends call me a crank on the subject of health. Well, a crank is used to move things. Many of my converts are as radical as I am. About Christmas I loaned our blacksmith a book; he has bought four copies now, three to loan. Talks health to every one who comes in the shop. He told me to-day he felt like a new man physically. "Could not have stood it long as I was feeling last fall." This is the kind of pay I like to get for my work. My last sale was to a very busy man who told me he had no time to read a book. I reminded him that his brother was just as busy a man as he, but one day a few months ago he found time to go to the hospital. The operation was very successful, but he died in a day or two. Another friend had no time to read a book—too busy. He has plenty of time now; had a stroke of paralysis, and the doctors say can never walk again. When a man or woman not in perfect health (and how many are?) tells me they have no time to read a book, I regard the statement just as I would were they to say, should I tell them their house was on fire, "Yes, I know it is; but I have not time just now to put it out."—T. T. HIBBEN, McKeesport, Pa.

Mr. Terry's Book, bound in cloth, is sold for \$1.00 or given with a year's subscription to "Gleanings in Bee Culture" for \$1.50

In connection with a year's subscription to GLEANINGS, 30 cents additional is required for orders from Canada, or 60 cents additional for orders from foreign countries.

Nearly a thousand copies of this helpful book have been distributed through the publishers of "Gleanings in Bee Culture," and not a single reader has expressed regret at his bargain. Mr.

A. I. Root heartily endorses Mr. Terry's writings on health subjects.

The Word

“falcon”

Where the good bee-hives come from

Factory--Falconer, N. Y.

117 North Jefferson St., Chicago, Ill.

Honey Markets

The prices listed below are intended to represent, as nearly as possible, the average market prices at which honey and beeswax are selling at the time of the report in the city mentioned. Unless otherwise stated, this is the price at which sales are being made by commission merchants or by producers direct to the retail merchant. When sales are made by commission merchants the usual commission (from five to ten per cent), cartage, and freight will be deducted; and in addition there is often a charge for storage by the commission merchant. When sales are made by the producer direct to the retailer, commission and storage, and other charges, are eliminated. Sales made to wholesale houses are usually about ten per cent less than those to retail merchants.

EASTERN GRADING RULES FOR COMB HONEY.

FANCY.—All sections well filled, combs straight, firmly attached to all four sides, the combs unsoiled by travel-stain or otherwise, all the cells sealed except an occasional one, the outside surface of the wood well scraped of propolis.

A No. 1.—All sections well filled except the row of cells next to the wood; combs straight; one-eighth part of comb surface soiled, or the entire surface slightly soiled; the outside surface of the wood well scraped of propolis.

No. 1.—All sections well filled except the row of cells next to the wood; combs comparatively even; one-eighth part of comb surface soiled, or the entire surface slightly soiled.

No. 2.—Three-fourths of the total surface must be filled and sealed.

No. 3.—Must weigh at least half as much as a full-weight section.

In addition to this the honey is to be classified according to color, using the terms white, amber, and dark; that is, there will be "Fancy white," "No. 1 Dark," etc.

NEW COMB-HONEY GRADING-RULES ADOPTED BY THE COLORADO STATE BEE-KEEPERS' ASSOCIATION.

No. 1 WHITE.—Sections to be well filled and evenly capped except the outside row, next to the wood; honey white or slightly amber, comb and cappings white, and not projecting beyond the wood; wood to be well cleaned; cases of separated honey to average 21 pounds net per case of 24 sections, no section in this grade to weigh less than 13½ ounces.

Cases of half-separated honey to average not less than 22 pounds net per case of 24 sections.

Cases of unseparated honey to average not less than 23 pounds net per case of 24 sections.

No. 1 LIGHT AMBER.—Sections to be well filled and evenly capped, except the outside row, next to the wood; honey white or light amber; comb and cappings from white to off color, but not dark; comb not projecting beyond the wood; wood to be well cleaned.

Cases of separated honey to average 21 pounds net per case of 24 sections; no section in this grade to weigh less than 13½ ounces.

Cases of half-separated honey to average not less than 22 pounds net per case of 24 sections.

Cases of unseparated honey to average not less than 23 pounds net per case of 24 sections.

No. 2.—This includes all white honey, and amber honey not included in the above grades; sections to be fairly well filled and capped, no more than 25 un-

capped cells, exclusive of outside row, permitted in this grade, wood to be well cleaned, no section in this grade to weigh less than 12 ounces.

Cases of separated honey to average not less than 19 pounds net.

Cases of half-separated honey to average not less than 20 pounds net per case of 24 sections.

Cases of unseparated honey to average not less than 21 pounds net per case of 24 sections.

BOSTON.—We quote fancy white comb at 17 to 18; light amber, 15; amber, 14; fancy white extracted, 10 to 11; light amber, 9 to 10; amber, 9. Beeswax, 30. Boston, March 5. **BLAKE-LEE CO.**

INDIANAPOLIS.—White comb sells at 18 cents in ten-case lots. Amber grades are in slow demand at lower figures. Best extracted sells at 11 to 12 in five-gallon cans. Jobbing houses are well stocked, but producers are not now offering any honey. Beeswax is in good demand, and producers are being paid 31 cts. per lb.

Indianapolis, March 5. **WALTER S. POWDER.**

BUFFALO.—The demand for white-clover comb honey is good at about one cent over last quotations. It will, no doubt, hold the advance, for there is very little arriving. Other grades are in a little better demand at firm prices. We quote fancy white comb honey at 18 to 19; No. 1 ditto, 17 to 18; No. 2 ditto, 13 to 15; dark ditto, 11 to 12; white extracted, 8½ to 9; dark, 7 to 7½. Beeswax, 28 to 30. Buffalo, Feb. 26. **W. C. TOWNSEND.**

DENVER.—The supply of strictly white comb honey is about exhausted, and prices are, as a consequence, higher than they otherwise would be, as the demand is light. We quote No. 1 white comb honey, per case of 24 sections, \$3.60; No. 1 light amber, \$3.35; No. 2, \$3.15. White extracted brings 9 cts.; light amber, 8; strained, 6½ to 7½. For clean yellow beeswax we pay 25 cts. in cash or 28 in trade, delivered here.

THE COLORADO HONEY-PRODUCERS' ASSO'N.
Denver, March 4. **F. Rauchtuss, Manager.**

CHICAGO.—The extremely cold weather we have had the past two months has restricted the sale of comb honey to a certain extent, as it could not be shipped; but with more moderate weather in view we can look for a more active demand from now on. We shall be pleased to get in touch with any prospective buyers of comb honey, and will quote them attractive prices. We still have for sale some very fine lots of Wisconsin comb honey packed in 24-section flat cases, glass fronts, and Western comb honey packed in double-deck cases, glass fronts. Extracted honey has been moving more readily. We still have in stock one car of fancy Utah water-white alfalfa extracted honey. We quote fancy and No. 1 white Wisconsin clover comb honey 16 to 17; No. 2 white and light amber, 15 to 16; medium amber and other inferior grades, 2 to 3 cts. per lb. less. Western alfalfa comb honey in double-deck cases, glass fronts, 16 to 16½; second quality, \$3.25 per case. Bright pure beeswax is firm at 30 to 32.

Chicago, March 4. **S. T. FISH & CO.**

Continued on page 5.

Mr. New Beeman.—"Well, well, nailing up your beehives already? Aren't you rather early?"

Mr. Successful Beeman.—"Now, then, that is just where so many make their mistake; they wait until the last moment and then rush and buy anything they can get. You have often asked me the secret of my successful beekeeping. Well, listen! I order early, buy the **best beehives and supplies** on the market, nail them up, and then I am ready for the bees. All my supplies come from

line of

Bee-keepers' Supplies.

At this season of the year we give the usual customary early-order discounts.

If you can figure your wants now to buy early and get the benefit of lowest prices, don't fail to consult us.

We have a line of supplies that are just superb—nothing to fear as to quality. Send for our large catalog. It's free.

Beeswax taken in exchange for supplies or cash.

We are 75 miles west of St. Louis. Shipping facilities good.

JOHN NEBEL & SON SUPPLY CO.,
High Hill, Montg. Co., Mo.

Honey Markets, continued from page 2.

CHICAGO.—The volume of trade during February was not as large as we looked for, and there still remains quite a quantity of both comb and extracted honey on sale. For the No. 1 fancy white comb, 17 to 18 cts. can be obtained; but for the off grades there is little demand, with prices ranging from 1 to 5 cents per lb. less according to color, flavor, and condition. Extracted white is salable at 8 to 9 cts., and the amber at 7 to 8 cts. Beeswax is steady at 30 to 32.

Chicago, March 4.

R. A. BURNETT CO.

NEW YORK.—There is nothing new to report as to the condition of our market. As we said in our last, comb honey is pretty well picked up; and the few odd lots that are coming in find ready sale at prices ranging from 14 to 17 cts. for white and from 11 to 13 for dark or amber. The market on extracted is not what could be reasonably expected at this time of the year. There has been a gradual falling-off in the demand during the last couple of months, which, with large stocks on hand, has had a tendency to lower prices, which remain nominal, or about the same as in our last quotation. Beeswax is steady at 30 to 31 cts. per lb.

New York, March 4. HILDRETH & SEGELKEN.

ST. LOUIS.—We have to report a slow movement in the honey market on both grades, comb and extracted. The stock of comb honey is, however, very small and not burdensome. Extracted honey is in better supply. We quote fancy white comb honey at 17; No. 1, 15 to 16; light amber, 13 to 14; dark, 8 to 11. Broken and leaking honey sells at much less. Extracted light-amber California sells at 8½ to 9; Southern amber, colored, 8 to 8½ in five-gallon cans; Southern, in barrels and half-barrels, 7 to 7½. There is no white-clover extracted honey offered in this market at present. Prime beeswax brings 30 cts. per lb.; impure and inferior, less.

R. HARTMANN PRODUCE COMPANY.

St. Louis, March 4.

(Organized 1870)

National Beekeepers' Association

Objects

The objects of this Association shall be to aid its members in the business of beekeeping; to help in the sale of their honey and beeswax; and to promote the interests of beekeepers in any other direction decided upon by the Board of Directors.

Every Bee-keeper Should Own and Read "The Manual of the Apiary"

By PROF. A. J. COOK

This interesting book is a very complete treatise on bees and bee-keeping, and is particularly valuable where one is interested in the anatomy and physiology of the bee, which has been very completely covered in this work. It is also valuable for its chapter on honey-plants, or bee-botany; 540 pages with good illustrations; bound in cloth. Price, by mail, \$1.15; \$1.00 by express or freight. . . . Order from the author,

A. J. Cook, Pomona College, Claremont, Cal.
Or from Dealers in Bee-supplies Everywhere

ZANESVILLE.—The local market is about as last quoted. In small lots, best grades of white comb bring 20 cts.; best extracted in 60-lb. cans, 11 to 12. Both comb and extracted are in limited demand at this season; but the approach of spring should have a stimulating effect. Producers are being offered 29 cts. in cash or 31 in trade for beeswax.

Zanesville, O., March 6.

E. W. PEIRCE.

SCHENECTADY.—There is but very little doing in our honey market, and the stock on hand is very small. We have one small lot of white comb that is moving off slowly at 18 cents. Extracted is not moving off as well as it should at this time of the year, even at the prevailing low prices. We have quite a lot of white put up in 5-lb. paper bags, but it does not prove to be a free seller.

Schenectady, March 2.

2 BEE BOOKS FREE!

"How to Make Money in Bees"

This book is for beginners. It tells how to get profit and pleasure from this fascinating occupation. It tells you how to select the bees, gives hints on swarming, feeding, wintering, and caring for the bees, their diseases, captivating habits, etc. It also suggests how to select proper equipment.

"Blanke's Bee Book." This book will interest both beginners and old beekeepers, large and small. It contains a complete description, with price list of our unrivaled line of hives, smokers, supers, frames, sections, machinery, and countless other equipments, besides containing useful information for the apiary owner. The list of questions and answers in the back of the book will prove of great benefit to beginners.

One or both books FREE.

Why Not REAR Your Own QUEENS?

Doolittle's "Scientific Queen-Rearing" and the **\$1.00**
American Bee Journal for 1912—Both for Only

Every Bee-keeper Should Have Both Book and Bee-Paper.

DOOOLITTLE'S "Scientific Queen-Rearing" book contains 126 pages, and is bound in leatherette with round corners. It tells in the clearest way possible just how the famous queen-breeder, Mr. G. M. Doolittle, rears the best of queen-bees in perfect accord with Nature's way. It is for both a amateur and veteran in bee-keeping. As all know, Mr. Doolittle has spent some 40 years in rearing queens and producing honey. He has no superior as a queen-breeder. You can learn to rear fine queens by following his directions. Read up now before the bee season is here.

You will not regret having this book, which also gives his management of the bees for the production of honey.

The book, and the American Bee Journal for 1912, for only \$1.00, is certainly a big bargain for you. Send the \$1.00 now, and we will begin your subscription with January 1, 1912, and mail you the book. Sample copy of the Bee Journal free. Address

March Winds

Will soon give place to the proverbial April showers. In other words, spring is at hand.

Are you ready for it, Mr. Beeman? As in most localities the last two seasons were not the most favorable, you probably did not stock up heavily on supplies, and therefore find yourself short of hives, frames, sections, foundation, or other beekeeping accessories. Do not make the mistake of waiting till the last minute before sizing up your needs; for when once the bees get down to business, time is valuable and delays are costly. The March discount of 1 per cent is also worth considering, and on a large order is quite an item of saving.

Of course you will want the best goods the time-tested ROOT line; and, which is scarcely less important, prompt attention, careful packing, and quick delivery—in short, PEIRCE SERVICE.

If you are numbered with our hundreds of pleased customers, we await your annual call. If not, let us demonstrate our ability to please YOU. A large illustrated catalog and price list free if you ask for it.

EDMUND W. PEIRCE

136 West Main St., Zanesville, Ohio.

Baby Chicks

Nice big strong vigorous chicks is what we ship. Safe arrival guaranteed. Price 8 to 15 cts. each; 100,000 for sale this season. Catalog free.

JOS. A. BLUM & CO., Dept. 3, Chatfield, Ohio.

When Ordering Supplies

remember we carry a full stock and sell at the lowest catalog price. Two lines of railroad—Maine Central and Grand Trunk. Prompt service and no trucking bills.

Protection Hive

The best and lowest-priced double-wall hive on the market. This hive has 7/8 material in the outer wall, and is not cheaply made of 3/4 material as are some other hives on the market. Send for circular showing 12 large illustrations. It will pay to investigate.

Bingham Smokers

Insist on "Old Reliable" Bingham Smokers, for sale by all dealers in bee-keepers' supplies. For over 30 years the standard in all countries. The smoker with a valve in the bellows, direct draft, bent cap, inverted bellows, and soot-burning device.

Smoker engine, 4-inch, each, \$1.25; mail, \$1.50.

Doctor, 3 1/2-inch, each, .85; mail, \$1.10.

Conqueror, 3-inch, each, .75; mail, \$1.00.

Little Wonder, 2-inch, each, .50; mail, .65.

Honey-knife, .70; mail, .80.

Manufactured only by

BINGHAM
 SELF-CLEANING
 BEE SMOKER

A. G. WOODMAN CO., Grand Rapids, Mich.

"If goods are wanted quick, send to Pouder."

(Twenty-third year.)

A Letter to You Quick

If you will, write me for an estimate on the list of goods that you are likely to require during the coming season. Perhaps you would like to make some inquiry about some of the goods which I offer, and answering your letters will be a real pleasure. Some winter losses are being reported; but beekeepers are not discouraged, and many of the losses are being replaced with modern and better equipments.

The hive question is an interesting one at this season of the year, and I can supply you with any style that you may prefer—ten-frame, eight-frame, metal-spaced frames, metal cover, and any surplus equipment that you may wish, and also the Danzenbaker hive with any of its equipments. Those of you who are getting your hives early, assembling and painting at your leisure, are certainly hitting the nail on the head. Sections and brood-frames with foundation attached will be found a great convenience when the swarming season opens. You may require a new smoker, an improved hive tool, or some of the conveniences which my catalog describes. Every thing of Root quality, and readers of this magazine know what that means.

If you are in need of honey I believe I can make it to your interest to place your order here. A honey circular and a sample of honey free by mail to prospective buyers.

If you are accumulating some beeswax you can realize 31 cents per pound for it by sending it here now.

Be sure to send for my new Bee Supply Catalog.

PUBLICATIONS ON BEE CULTURE

Please use coupon below, checking the numbers of items wanted.

The pamphlets and booklets listed below are of more than ordinary interest:

- 1 **My First Season's Experience with the Honey-bee.** By the "Spectator," of the *Outlook*, of New York. A ten-page leaflet detailing the experiences of this well-known writer. You will read the leaflet through before you lay it down. Free.
- 2 **The Bee-keeper and Fruit-grower.** A 15-page booklet giving actual facts regarding the value of bees to fruit, and showing how bee-keeping may be doubly profitable to the fruit-grower. Fruit-growers are realizing as never before the necessity of having honey-bees in close proximity to their blossoming fruit. Free.
- 3 **Bee-keeping for Sedentary Folk.** A 24-page leaflet reciting the actual experiences of an amateur bee-keeper, showing what equipment is best, points derived, etc. Free.
- 4 **Catalog of Bee-keepers' Supplies.** Our complete catalog will be mailed free to any address on request.
- 8 **Habits of the Honey-bee.** By Dr. E. F. Phillips. A somewhat scientific handling of the habits and anatomy of the bee. Price 10 cts.
- 9 **How to Keep Bees.** A book of 228 pages detailing in a most interesting manner the experience of a beginner in such a way as to help other beginners. Price \$1.00 postpaid.
- 10 **The A B C of Bee Culture.** A complete encyclopedia of bees, of 576 pages, fully illustrated, \$1.50 postpaid; half leather, \$2.
- 11 **Cleanings in Bee Culture.** A 64-page illustrated semi-monthly magazine, the leading exponent of bee culture in this country. Ten cents per issue, but to new subscribers we will furnish it six months for 25 cts.
- 12 **Back-yard Bee-keeping.** Six interesting lessons written in readable newspaper style. Many facts to encourage the "City Bound" man or woman with the back-to-the-land longing. Free.
- 15 **Truth About Sweet Clover.** Interesting booklet of nearly 100 pages. Tells of value of sweet clover for honey, for plowing under, as fertilizers of the soil, and food for horses, cattle, swine, sheep, etc. Free.

The coupon below may be used as an order sheet by properly checking the numbers of items wanted and adding your signature, and remittance, if required.

WITH OUR ADVERTISERS AND READERS

If one expects to get the fullest enjoyment and returns from his garden this summer, it is time to be thinking about the tools that will be necessary; and the same is true also of the farm and fields, for one can not expect to get the most out of the soil if he hasn't suitable tools with which to cultivate it and to harvest the crops when they are grown. Good tools mean a keener pleasure in working the little garden plot, and correspondingly larger returns from it; and they also mean a larger per cent of profit from the fields. We mark the prosperous farmer nowadays by the appearance of his buildings, the tools he owns, and the care he takes of them; in fact, he can't be prosperous unless he does use all these means for getting the very most out of the soil and the time given to its cultivation. The toolmakers this spring are sending out some very attractive catalogs, and we are sure it will pay any one interested in these things to read them. Don't blame the trusts, the railroads, nor the politicians if your place isn't yielding what it should. Get busy this spring, and see if the trouble doesn't lie nearer home.

May be some new wheels are needed for the wagon. There are wheels and wheels, and we didn't know there was so much difference in them until we read the other day of an expedition undertaken some time ago across the Nubian Desert, which failed because the wheels of the carts and wagons would break down under the intense heat and heavy sand until a caravan was finally fitted out with Electric wheels, and finally made the trip, opening a vast new territory to civilization. This company states that their wheels are especially adapted to farmwork, as they will give a lighter draft and easier loading than the high-wheeled wagon. They are offering a picture of the camel caravan to any one addressing the Electric Wheel Co., Box — Quincy, Ill.

Fences are another thing that usually need attention at this season. A good wire fence is not an expenditure but an investment, for a really good one will last for more than twenty years. Wire fencing bought direct from the maker may be had at very reasonable prices; in fact, there is not the proportionate advance in this that there is in other lines. Mr. A. L. Kitselman, of Kitselman Bros., Muncie, Ind., built the first practical working machine for making wire fence; and because of the skepticism of dealers of the success of his plan he began to market his product direct to buyers, and has continued that policy since, although at this time wire fencing may be had from any hardware or implement dealer. Poultry fencing is said to be much more satisfactory than the old-style netting; in fact, wire fencing is made for all sorts of special purposes, and the right kind may be depended upon to do the work.

Southwestern Beekeepers!

At no other point in this part of the bee-keeping world can you get the combination of prompt and efficient service and excellence in **QUALITY** of goods that we can give you from

San Antonio.

The freight and express facilities of our city are almost unlimited. Shipments may leave at once over the fastest routes, and prompt delivery is assured. Our Mr. Udo Toepperwein is, perhaps, the best authority on bee-keeping subjects in this part of the country. Not many years ago he was a practical beekeeper on a large farm, and his early experience in this line enables him to understand the needs of beekeepers better than the ordinary supply dealer. He knows supplies, both from the standpoint of a user and a dealer, and you may depend upon his judgment to give you just what you need.

Our stocks are now complete for early orders; and with the prospect there is for a good season, delays are dangerous. All our goods are new and fresh, of Root manufacture, which is a guarantee of the quality. We sell in original factory packages at factory prices, and offer the manufacturer's discount of one per cent for March cash orders.

Weed Process Comb Foundation.

Our trade in this product has increased to such an extent that we have been obliged to install our own plant to make this. We can use all your wax at current prices, and can furnish you foundation which we are sure will please you, both in quality and price.

Honey-cans.

We have our usual large stock, and can fill orders the day they are received. Try us this season and be satisfied.

Our catalog will be sent on request, also delivered, prices quoted on any list submitted. You can save money by ordering from us. We have paid the freight to San Antonio, and our stock is at your service. Whether your order is large or small we shall be glad to handle it. Give us a trial and we will do the rest.

Queens.

Untested, April 10 to May 10, \$1.00 each. Tested, March 1 to April 10, \$1.25 each. Selected tested, March 1 to April 10, \$2.00 each. Breeding queens, the very best, April 1 to December 1, \$5.00.

No-drip Shipping Cases.

A big stock of these on hand at low prices. Write for particulars. It will pay you to get our prices.

Toepperwein & Mayfield,

Corner Nolan and Cherry Sts.

San Antonio, Texas.

When You Buy Lewis Beeware You Get ———

Lewis Quality—which means that all Lewis Hives are made out of clear white pine, and Lewis sections made out of fine bright basswood. The material in these goods is the best obtainable, and selected by experts.

Lewis Workmanship—The Lewis factory is equipped with the latest improved machinery, constantly watched over by experts. The Lewis head mechanic has had thirty-five years of bee-supply experience, the superintendent of bee-hive department twenty-nine years; the superintendent of sections twenty-eight years. These and many other skilled men have a hand in all the Lewis goods you buy.

Lewis Packing—All Lewis Beeware is carefully and accurately packed. A patent woven wood and wire package, made only by the Lewis Company, is employed largely in packing. This makes the package light, compact, and damage-proof.

Lewis Service—Years ago all goods were shipped direct from the factory, with attending high freight rates and delays during the honey season. Now Lewis Beeware can be obtained almost at your own door. Over thirty distributing houses carrying Lewis Beeware by the carload are dotted all over the United States and foreign countries. Write for the name of the one nearest you.

G. B. Lewis Company, Manufacturers of Beeware, Watertown, Wisconsin

If BEES Could TALK

APPLE GROWING

The healthier the tree, the better the fruit. The longer trees are sprayed with "SCALECIDE" the more beautiful, healthful and fruitful they become. "SCALECIDE" is the acknowledged leader of all soluble oils—the only one containing distinct fungicidal properties. "SCALECIDE" will positively kill all soft-bodied sucking insects without injury to the tree. Let us prove these statements. Send today for free booklet "SCALECIDE—the Tree Saver." Address B. G. PRATT CO., Mfg. Chemists, 50 Church St., N. Y. City.

CATALPA Trees. True to Name. Ten times your money back for all trees that prove not true species. Also Catalpa seed. I have Cypress Trees, the most beautiful tree in the world.

H. C. ROGERS, Box 13 Mechanicsburg, Ohio

GET THESE MONEY-MAKING SECRETS with FARM JOURNAL

*Is this cock properly held?
"Poultry Secrets" tells
how to carry fowls, and
many other secrets far
more important.*

For \$1.00 you can get now not only the **FARM JOURNAL** for **FOUR** full years, but also your choice of any one of our famous booklets, "Money-making Secrets," that other people have bought by the **HUNDRED THOUSAND**.

Just note what the information given in one of them, "The Million Egg-Farm," did for Robert Liddle, a clerk of Scranton, Pa.

In May, 1910, Robert bought 2300 day-old chicks. He spent just one week studying the methods now given in this book. This was his only preparation for the business. Result this "greenhorn" raised 95 per cent of all his chicks—a most uncommon record! Of these, 1350 proved to be pullets. In less than seven months he was getting 425 eggs daily, and selling them at 58 cents a dozen. His feed cost averaged \$4.00 a day, leaving him **OVER \$17.00 A DAY PROFIT**—and this before all his pullets had begun laying.

Isn't "Money-making Secrets" a good name for such booklets?

Read what people say of the other booklets, and of the **FARM JOURNAL** itself:—

"I find your Egg-Book worth untold dollars," says **ROY CHANEY**, Illinois. "What it tells would take a beginner years to learn."

"I am much pleased with the Butter Book," writes **F. J. DICKSON**, Illinois, "and would like to know how I could secure 300 copies, one for each patron of our creamery."

"Duck Dollars is the best book I ever had on duck-raising," says **F. M. WARNOCK**, Pennsylvania.

"If your other booklets contain as much valuable information as the Egg-Book I would consider them cheap at double the price," says **F. W. MANSFIELD**, New York.

"I think your Egg-Book is a wonder," says **C. P. SHIREY**, Pennsylvania.

"The **FARM JOURNAL** beats them all," writes **T. H. POTTER**, Penn'a. "Every issue has reminders and ideas worth a year's subscription."

"One year I took another agricultural paper," says **N. M. GLADWIN**, Washington, "and it took a whole column to tell what **FARM JOURNAL** tells in one paragraph."

"If I could get as good interest on every dollar as I get from the **FARM JOURNAL**, I would soon be a millionaire," says **A. W. WEITZEL**, Pennsylvania.

"**FARM JOURNAL** is good for the man behind the counter, as well as the man in the field," says **J. I. SLOAT**, a Virginia bank clerk.

MONEY-MAKING SECRETS

These booklets are 6 by 9 inches, all profusely illustrated

POULTRY SECRETS is a great collection of discoveries and methods of successful poultryry. It gives Felsen's famous mating chart, the Curtiss method of securing 50 per cent more pullets than cockerels, Boyer's method of insuring fertility, with priceless secrets of mating, breeding, feed and feeding, how to produce winter eggs, and others long jealously guarded, now first published.

HORSE SECRETS exposes the methods of "bishoping," "plugging," cocaine and gasoline doped, and other tricks of "eyes" and swindlers, and enables any one to **TELL AN UNSOUND HORSE**. It also gives many valuable training, feeding, breeding, and veterinary secrets.

The **MILLION EGG-FARM** tells all of the methods by which **J. M. Foster** makes over **\$18,000 A YEAR**, mainly from eggs. Back-yard chicken-raisers, learn all about the "Rancocas Unit," and how **Foster FEEDS** his hens to make them produce such quantities of eggs, especially in winter.

CORN SECRETS, the great **NEW** hand-book of Prof. Holden, the "Corn King," tells how to get ten to **TWENTY BUSHELS MORE PER ACRE** of corn rich in protein and the best stock-feeding elements. Pictures make every process plain.

The "**BUTTER BOOK**" tells of seven cows that produced **HALF A TON OF BUTTER** each year (140 pounds is the average). An eye-opener for dairymen. Get it, weed out your poor cows, and turn good ones into record-breakers.

GARDEN GOLD shows how to make your back-yard supply fresh vegetables and fruit, how to cut down your grocery bills, keep a better table, and get cash for your surplus. It tells how to plant, cultivate, harvest, and market.

DUCK DOLLARS tells how the great **Weber** duck-farm near Boston makes every year 50 cents each on 40,000 ducklings. Tells why ducks pay them better than chickens, and just how they do everything.

TURKEY SECRETS, the latest authority on turkey-raising, discloses fully the methods of **Horace Vose**, the famous Rhode Island "turkey-man" who supplies the wonderful Thanksgiving turkeys for the White House. It tells how to mate, to set eggs to hatch, to feed and care for the young, to prevent sickness, to fatten, and how to make a turkey-ranch **PAY**.

Gleanings in Bee Culture Great Combination Offer

By special arrangement with the publishers, for a limited time we can offer the **FARM JOURNAL FIVE** years and **GLEANINGS IN BEE CULTURE** one year in advance, **BOTH FOR \$1.00**. Or **FARM JOURNAL** **FOUR** years and any one of the booklets, "Money-making Secrets," with **GLEANINGS** for one year . . . **ALL THREE for \$1.00**

This price is good for a few weeks only, and may be increased at any time without notice.

Any subscriber who is in arrears for either paper can take advantage of this offer by paying up in full to date, and adding \$1.00 for the combination.

GLEANINGS IN BEE CULTURE, Medina, Ohio.

Enclosed find \$1.00 for which send **GLEANINGS** for one year and **FARM JOURNAL** for five years, or for four years with this booklet.....

PRICE \$1.10 POSTPAID.

The A. I. Root Co., Medina, Ohio

COLD-FRAME OR HOT-BED SASH.

GET OUR NEW FREE BOOK: How to Make and Run a Hot-bed

Single sash set up ready to use.

Make and Run a Hot-bed, which gives full directions for this work, and tells what crops are most easily grown. Copies are sent free upon request. Prices on sash are as follows:

One sash, in the flat, for sample, without glass, 90 cts.; 5 in the flat, 85 cts. each; 10 in the flat, 80 cts. each; put together, 10 cts. each extra. Glass 8x10, just right for the above, \$2.50 per box of 90 lights; 5 boxes, \$23.30 each; 10 boxes, \$22.20 each. Prices of glass subject to change. Get our list price at time of ordering.

Some years ago we had a call for hot-bed sash and made up a small order. Our wood-working facilities being most complete we found it possible to manufacture sash of first-class quality at a price slightly under that charged elsewhere for an article of similar quality. Orders continued to come in occasionally, and we finally listed cold-frame or hot-bed sash in our catalog. Since then the demand has grown each year.

We make the sash of regular size, 3 ft. 4 in. by 6 ft. for four rows of glass 8 in. wide. Each sash holds 28 panes of glass, size 8 by 10 in. If any prefer larger glass we will furnish sash for three rows of 11-in. glass at the same price. Sash are made of cypress and are almost impervious to decay. Sash are usually shipped from here knocked down at a low rate of freight, and can be put together by anybody, as they are mortised and tenoned in the regular way. They are 1½ in. thick, outside bars about 2½ in. wide, and inside bars about 1½ in. The bars are grooved to slip the glass in place.

Each season we ship sash in carload lots to large seed-houses, and we have complimentary reports on their quality. It is both interesting and profitable work to maintain a hot-bed, and every one who has a garden spot should build a cold-frame. We have prepared a small book entitled "How to

Make and Run a Hot-bed," which gives full directions for this work, and tells what crops are most easily grown. Copies are sent free upon request. Prices on sash are as follows:

Bundle of 5 sash, knocked down and crated for freight shipment.

THE A. I. ROOT COMPANY,

Medina, Ohio

SCIENTIFIC POULTRY RAISING

It is Just as Applicable to Twenty Hens on a City Lot as to a Thousand on a Farm. Conducted as an Experiment it will Offset Part or All of Your Living Expenses, and Increasing to a Larger Scale Multiplies Your Profits Proportionately

NOT only is there a good living in poultry raising, but it can be developed by ANY ONE into an exceedingly profitable business. There is a vast difference, however, between simply "keeping a few chickens" and practical poultry raising on a scientific basis. The latter way is the ONLY RIGHT way, and as long as you are going to do a thing, you might as well do it right as do it wrong. Scientific poultry raising produces physical results and financial profits that are absolutely beyond the understanding and belief of those who are in the Oh-yes-we-keep-a-few-chickens class.

For instance, it is absolutely news to them that a family of six can make a good living from six hens, they do not know that 1,600 eggs, or 160 pounds of broilers, can be produced per annum in a 6 ft. square corner of a garden, or on the flat roof of a tenement house. Yet these statements are justified by what has been and is now being accomplished by the wonderful Philo System.

FREE—These Six Thoroughbred

It may surprise even you to learn that at the Philo Plant, in Elmira, where fertile eggs are produced and hatched every day in the year, a **half acre** devoted to poultry has produced in twelve months a **net profit of twenty-five thousand dollars!** If you will come to Elmira you can see with your own eyes the simple details of the method by which these splendid results are obtained, and all that is done at the Philo Plant you yourself can do. There is nothing difficult about it. It is as simple as a, b, c. And if you cannot come and personally inspect the working of the Philo System, you can learn all about it by reading the Philo Books.

"**Making Poultry Pay**" contains 96 pages of carefully written and selected matter of immediate and permanent value to every poultry raiser, and numerous illustrations. We will mail you this book for 10 cents in coin or stamps to cover postage, just to show you some facts about the poultry business and its possibilities that you possibly never dreamed of. Our big book, "**Philo System of Progressive Poultry Keeping**," is the text book of poultry raising. It is complete in every department, exhaustive in description of causes, reasons and results, elaborately illustrated, and conveys to every purchaser the right to use the Philo System and any and all of the special Philo appliances. It tells you plainly and precisely how to obtain Philo results, and if you follow these simple instructions you positively cannot fail! Price, \$1.00, postage paid. "**The Poultry Review**" is a monthly publication edited by E. W. Philo, the originator of the Philo System, and an able staff of writers comprising expert and practical poultrymen. This magazine is devoted exclusively to the idea of being immediately and directly helpful to its readers. Subscription price, \$1.00 per annum.

MAIL REMITTANCES TO E. R. PHILO, 3522 LAKE STREET, ELMIRA, N. Y.

THE FAMOUS "CYCLE" HATCHER

The CYCLE Hatcher takes the place of the hen does away with the large and clumsy incubator, and in its operation and results IS AN ACTUAL IMPROVEMENT ON NATURE. It hatches a larger percentage of eggs than are hatched by a hen, and the chicks are stronger. The supply of heat in the CYCLE Hatcher comes from the center, and carries with it an abundance of fresh, heated air that is required to travel only six inches to reach every egg in the extreme portions of the nest.

The heat is governed by a double wafer regulator that is placed so close to the eggs that it is sensitive to the natural heat of the growing embryo chick in the egg as well as to the supplied heat from the lamp. The nest, heater, lamp, thermometer and the automatic appliance to release the surplus heat, make a complete hatcher that is absolutely reliable, and so simple in construction as to require no detailed description here. The accompanying pictures of the complete machine and the nest are self-explanatory. Capacity, 50 eggs. Constructed entirely of metal, except insulation. Is self-regulating. Requires no supplied moisture, and will last a lifetime. Shipping weight, well-boxed, 20 pounds. Bottom picture shows Hatcher with heater or cover removed.

PRICES F. O. B. ELMIRA.

A Living."

YIELDS SENSATIONAL PROFITS!

Is Simply a Matter of Proper Care in Selection, Feeding, Breeding, Housing, Hatching and Brooding. Experience is Not Necessary. You Have Only to Follow the Rules of the Wonderful Philo System, and Success is Assured.

POULTRY raising is today on a scientific basis. You can go into it knowing positively that it is going to return you both pleasure and profit — to say nothing of the satisfaction of having on your table, always, strictly fresh, sweet eggs; and you can increase this profit just as much as you please, according to the amount of time you devote to the work. Whether you raise ten hens or a thousand, no "chicken yard" is needed. The hens are more contented and lay better when they are confined in the Philo sanitary coops, and for the same reason the meat of your broilers is sweeter and tenderer when they are not allowed to toughen their muscles by excessive running and exercise. Furthermore, when chickens run you cannot control their food as you can when they are kept in Philo coops; and proper food makes sweet eggs, tender meat, and breeds improved stock.

**COMBINED
BROODER-
HATCHER**

Our Brooder-Hatcher does double duty meeting the requirements of all classes of poultry raisers, whether they raise only a few chickens annually, or large numbers. It reduces the cost to about one-half that of hatching with incubators or hens, and it makes possible the raising of fowls in small spaces—in city yards, on lawns, gardens, in boxes, sheds, on porches, roofs or in other out-of-the-way places where a wooden machine could not be operated.

This combined Brooder-Hatcher is the result of many years of experimenting to make one lamp do double duty, and at the same time have a machine constructed to successfully do the work artificially and carry out the laws of incubation and brooding. Its capacity is 50 eggs, but just as good results are obtained by setting a few eggs every day or once each week or ten days, thus taking off a hatch as often as you wish, and filling in empty portion of the machine with fresh eggs. This is the machine that has helped largely in getting such big returns from a few hens in the Philo System plant. Shipping weight, well-boxed, 25 pounds. Bottom picture shows inside of Brooder-Hatcher, hatching eggs and brooding chicks at the same time.

Chicks, and a Brooder—FREE

(See Combination Offer)

Start with a few hens and two or three cockerels, and gradually increase you. Inc. From your hatchings save the finest specimens for breeding purposes. Follow PHILLO instructions to the letter, and you will be astonished at the result. We have thousands and thousands of unsolicited testimonials from all parts of the country, reporting the gratifying and wonderful returns from the Philo System, and the "Cycle" Hatcher and Combined Brooder-Hatcher, that have been obtained by people who have carefully followed Philo instructions.

As many of these testimonials as we had room for are published in the Philo Books, with names, dates and addresses. You are at liberty to write to any of them. All are making money, all are delighted with results. Many are going into poultry raising as a business, some are taking it up as a side line, others simply to cut down living expenses. Often they report a 100 per cent. hatch, and 2-pound broilers in from 7 to 8 weeks is commonplace. You ought to read some of these letters and learn what others are doing—for positively you can do the same.

OUR SPECIAL COMBINATION OFFER, FOR 30 DAYS:

By an arrangement with Cycle Hatcher Co., we are enabled to make the following special offer. To any one who sends us, within 30 days, only \$3.00, we will send all of the following: One copy "A Little Poultry and A Living," One copy "Making Poultry Pay," One copy "Philo System of Progressive Poultry Keeping," One year's subscription to "Poultry Review," Complete instructions for building Philo Patented Coops, and rights to use them. **ONE BROODER CONTAINING THE 6 THOROUGHBRED CHICKS** (White Orpingtons or White Leghorns), together with Galvanized Troughs, and Cycle Chick Food enough to give them a good start. Mail your orders quickly and state when you wish us to make shipment of brooder and chicks. The books are sent immediately.

QUIRIN'S famous improved Italian queens, nuclei, colonies, and bees by the pound, ready in May. Our stock is northern-bred and hardy; five yards wintered on summer stands in 1908 and 1909 without a single loss. For prices, send for circular.
QUIRIN-THE-QUEEN-BREEDER, Bellevue, O.

Special Notices

By OUR BUSINESS MANAGER

We have about two tons of choice Michigan and New York State amber extracted honey in five-gallon cans. The largest part of the honey was gathered from clover, but we presume many of the producers were busy with other work so did not get it extracted until after the fall flows came on, so there is enough dark honey mixed with this to grade it amber. We offer it put up in the original packages of two five-gallon cans to the case, at 8½ cents per lb., delivered in good condition on board the cars at Medina. We seldom have a lot of honey as good as the above at such a low price. In ordering mention lot No. 107.

SWEET-CLOVER SEED.

We are obliged to make a further advance in the price of hulled white-sweet-clover seed. We are sold out for the time being; but a new importation is expected in New York March 18. The importer has raised the price on us, and we in turn must mark up our price to the following: 1 lb., 27 cts.; 10 lbs. at 24; 25 lbs. at 23; 100 lbs. at 22, subject to further changes in the market, and subject to our being able to secure the seed. The demand is greater than ever before. Of the unhulled biennial yellow we have only a few hundred pounds; and when that is gone we can not obtain more until a new crop is gathered. We still have a good stock of unhulled white and hulled annual yellow.

ONE-FRAME OBSERVATION HIVES.

In cleaning up some stock we find quite a number of the one-frame observation hives which we

used to sell years ago. The style is shown in the illustration above. They are made to take glass 9 by 19 each side, and no shutters are provided to cover the glass. We offer them in flat, without glass, at 35 cents each; put up and finished with glass, \$1.25 each.

MAPLE SYRUP AND SYRUP.

Owing to the heavy demand last year for our Ohio rock-maple syrup and sugar we have decided to book orders in advance of the crop at the following prices:

Single one-gallon can or one case of six one-gallon cans, at \$1.25 per gallon.

Two to ten cases of six one-gallon cans to case, at \$1.15 per gallon.

Larger quantities, 75 to 100 gallons, at \$1.10 per gallon.

For a number of years we have not been able to get sufficient quantities of maple sugar to meet the demand. We hope this year to obtain a larger supply. We quote as follows:

1 to 25 lbs. best rock-maple sugar at 15 cts. per lb.
26 to 50 lbs. ditto at 14 cts.
51 to 250 lbs. ditto at 13 cts.
251 to 1000 lbs. ditto at 12 cts.

Our inspection of sugar and syrup as they come in from the producers will be more rigid than ever, as our requirements are based upon U. S. standard regarding the color, flavor, and purity of both sugar and syrup. Let us book your order now, as the first run is considered by all to be the best.

NEW BOOKLET OF HONEY RECIPES.

Booklet No. 31 of our Beekeepers' Ten-cent Library, entitled "The Use of Honey in Cooking," is a

collection of about 100 tested recipes for making cakes, cookies, breads, etc., in which honey is used. In many ways this is the most complete and interesting honey-recipe book which has ever been prepared for wide distribution. The recipes were collected from beekeepers and good cooks everywhere, and carefully tested under our personal supervision during the past year. Only those that have given entirely satisfactory results are included in this collection.

By way of illustration, "The Use of Honey in Cooking" has as a front cover a reproduction of a capped comb, and on the five following right-hand pages, opposite descriptive reading-matter, these illustrations appear in order: "The same comb that we show on cover with the cappings shaved off with a sharp knife, exposing the dripping honey in the cells;" "The uncapped combs being lowered into a honey-extractor;" "Honey-extractor in operation, showing how the combs are whirled rapidly and the honey thrown out of the cells by centrifugal force against the inside of the can;" "Drawing off the honey through the gate at the bottom of the extractor;" "The comb after being taken from the extractor, showing the cells are undisturbed and the comb as good as new, and ready to be filled again by the bees." Thus it will be seen that the complete process of the making of extracted honey is pictorially explained. This is a result which has long been sought, to correct the popular impression as to the manufacture of extracted honey by some artificial process.

Under the heading of "Food Value of Honey" an introductory of seven or eight pages appears, with a discussion of the subjects, "What is Honey?" "Different Flavors of Honey;" "Why Use Honey in Cooking?" "Where to Keep Honey;" "Honey Recipes;" "Caution Regarding the Use of Honey in Cooking."

The recipes are set in ten-point type of plain and readable face, and the booklet is printed on paper of very fine quality, with paper cover. There are 64 pages in all. While there will be a great demand for single copies of this booklet from our readers and friends throughout the world at the price of 10 cents per copy, we anticipate a still larger demand from beekeepers, who will appreciate the advantage of using advertising matter of this high class in their honey-selling campaigns. We have printed copies of "The Use of Honey in Cooking" in considerable quantities, and the back cover page has been left blank so that the advertisement of the local dealer or honey-distributor may be placed thereon. It is our desire to offer these booklets for sale in quantities, as desired, at the following prices, which include the printing of an advertisement or price list, with name and address upon the back cover. No other address will be given in your booklet.

100 copies of "The Use of Honey in Cooking," printed with your advertisement, - - -	\$4.50
150 ditto, - - - - -	6.00
200 ditto, - - - - -	7.75
250 ditto, - - - - -	9.25
500 ditto, - - - - -	17.25
1000 ditto, - - - - -	25.00

Quotations on larger quantities upon request.

Special Notices

By A. I. ROOT

"A NATION OF BEGGARS."

I want every reader of GLEANINGS who is not already taking the *Practical Farmer*, Philadelphia, to send a post card asking for their issue of Feb. 24, as a sample copy; then read Terry's article, "A Nation of Beggars." The "tipping" business is being done away with, along with other "swindles," and it is high time the begging business in church and out of church was stopped. Terry says people are staying away from church because they can not stand this everlasting urging to give for this, that, and the other. In another column he tells us why it "costs so much to live," nowadays. One reason is because we continue to pay \$9.00 a bushel for corn ("toasted cornflakes") when the corn in our cribs is worth only 65 cts. a bushel. We not only lose health, but help to make millionaires of the men who stack up their foods in paper boxes in our groceries.

My Finest Car

By R. E. Olds, Designer

Reo the Fifth—despite its price—marks the best I know. It is My Farewell Car, based on 25 years of experience. And no man will ever, in my estimation, build a much better car.

My Limit

In 25 years tens of thousands of men have come to have faith in me.

I say to them and to others that this Farewell Car shows the utmost of which I am capable.

In all the 18 months which I spent on this car the selling price was never considered.

Reo the Fifth is my finest creation. It is now the only car built in this mammoth plant.

So all my past prestige, and all this concern's future, are at stake on this single car.

The Standard Car

I don't mean that men can't build more costly

cars—heavier, larger, more powerful cars. I have built them myself—up to 6-cylinder sixties.

But most men who know have come to seek moderation. They have proved that excesses in size, weight and power are useless and immensely expensive.

The popular car of the future will be the 30 to 35-horsepower, four - cylinder car. So I have adopted this standard type for My Farewell Car.

My claim is this:

It is utterly impossible to use better materials, better workmanship or devices than I use in this car.

It will never be possible, at any price, to get more of real worth in a car.

Price Not Fixed

The present price—\$1,055—is no measure at all of the worth of this car. My own idea is that the price is impossible.

It is based on an output probably beyond our powers. It is based on a very low cost for materials—much lower than for years. It is based on ideals of utter efficiency which even this plant can't reach.

So this price is not fixed. All our contracts with dealers provide for advance. Reo the Fifth should not be judged by this altruistic price. Judge it solely by the merits of the car.

Top and windshield not included in price. We equip this car with mohair top, side curtains and slip cover, windshield, gas-tank, and speedometer—all for \$100 extra. SELF-STARTER, IF WANTED, \$20 EXTRA.

Where It Excels

My advantage in designing lies in 25 years of experience. I have built tens of thousands of cars, in 24 models, and I know all the possible troubles.

My axles and driving shafts are much larger than necessary, and I build them of nickel steel.

My connections are built of Vanadium steel. And I prove every alloy by analysis.

My differential was designed for 45 horsepower. My gears are tested in a crushing machine of 50 tons' capacity.

My carburetor is doubly heated, to deal with poor gasoline. The magneto I use must pass a radical test.

Unusual Care

My excess of caution, my big margins of safety, result from decades of experience. I am too old in this business to take any chances.

I carry inspection to the extreme. I insist on repeated tests.

I use more Roller Bearings than were ever before

employed in this type of car. There are only three ball bearings in Reo the Fifth, and two are in the fan.

So with every feature. Each is the highest, the costliest type known to motor car engineering.

No Petty Economies

The wheel base is long, the wheels are large, the car is over-tired.

The body finish consists of 17 coats. Even the engine is nickel trimmed.

The upholstery is deep—made of genuine leather—filled with genuine hair.

The design of the car shows the last touch of up-to-dateness.

Every detail of this car breathes of utter perfection.

Center Control No Side Levers No Reaching

This car also embodies my new center control. The gear shifting is done by this center cane-handle

—by a slight, easy motion in each of four directions.

There are no side levers to block either front door. Both of the brakes are operated by foot pedals. One pedal also operates the clutch.

Thus the driver may sit, as he should sit, on the left hand side. He is next to the cars which he passes. He is on the up side of the road. Heretofore this was possible in electric cars only.

This simple form of control—the best ever invented—is exclusive to Reo the Fifth. 

Ask for the Book

Reo the Fifth is the most interesting car of the season. It comes pretty close to finality.

It is My Farewell Car, and the price is sensational. It is a car that you should know.

Ask for our catalog, giving all details and picturing all the body designs. When we mail the book we will tell you where to see the car. Address,

R. M. Owen & Co., General Sales Agents for Reo Motor Car Co., Lansing, Mich.

Canadian Factory, St. Catharines, Ont.

ROOT'S BEEKEEPERS SUPPLIES

You may have a catalog of supplies; but if you haven't ours for 1912 you have missed something really worth while, and should get one at once. It is the largest and most complete ever published—more than a mere price list of supplies—a book that every beekeeper can read with pleasure and profit. Beginners will find answers to many perplexing questions, and advanced beekeepers timely suggestions that will save them money. Old customers are writing us frequently letters like the following:

Your catalog for 1912, designated ROOT'S BEEKEEPERS' SUPPLIES, is received, and I certainly thank you for this book. I have had your catalog on my desk for years, and have used Root's supplies all along. I note the enlargement and improvement in your new catalog, and notice many things I expect to add to my apiary.
Crystal City, Texas. C. W. Cox.

Our catalog this season also gives a full and complete list of books and booklets which we can supply. Many of these booklets are free, which doesn't mean that they are not worth reading, but simply that we want you to be informed on the subjects of which they treat. Send for a catalog, and check those in which you are interested.

Quick Deliveries

Next to having the best goods made, there is nothing so important to the beekeeper in the busy season as to have goods delivered just when they are wanted most. It isn't always possible to ship goods from a distant factory and have them reach destination within a day or two, as is sometimes necessary during the height of the season, but with distributing-houses located in the large shipping-centers we are able to supply beekeepers everywhere, with no loss of time and with minimum transportation charges.

Send Your Hurry Orders

to any one of the offices listed below, and let us show you what we can do for you in point of service. Cars are going to these branches at the rate of two or three a week, so the stocks are new and fresh, and we usually have just what you want. If it isn't in stock at your nearest branch our manager will include your order with his specifications and you may have your goods come in the next car, thereby saving on transportation charges and getting the goods in better shape than you would by local freight.

Whatever Your Wants

we can supply you, and, of course, there is no question about the quality of our goods. The name "ROOT" in connection with bee-supplies means the best of every thing in this line, and the best is always the cheapest, as our customers will testify. If you have never used our supplies you should make a trial of them this season. Once used, we are sure you will want no other.

I have just received my goods, order No. 10,739. I am more than pleased with them. I had intended to make my hives, but when I received the sample hive and saw the No. 1 pine lumber from which it was made, and considering the workmanship, I am satisfied I can buy cheaper than I can make them; enough cheaper to save the price of the lumber.

Cleanings in Bee Culture

VOL. XL. APRIL 1, 1912, NO. 7.

Have You Robbed Your Farm?

A True Story With a Moral

Some years ago a young man bought a farm on the edge of an old peat bog in Illinois. The soil was evidently very rich, and the first year yielded a big crop of corn—85 bushels per acre. The young man was happy, took unto himself a wife, built a little home on a little knoll on the farm and settled down. The next year he had another bumper crop on the farm and a pair of twin boys in the home, and he was happier than ever.

Well, he continued to live and farm this place for twenty years, and worked hard and faithfully, but in that whole time never raised another good crop, and he couldn't understand it, especially since the first crops were so fine.

One day a soil specialist came along, examined the soil and found it lacking in phosphorus. The first two crops had used up all there was, and more phosphorus had to be added before another crop could be harvested from this soil.

When the specialist told this to the farmer, and that for a small sum per acre he could have added the phosphorus and raised a bumper crop every year, he just broke down and cried. He said: "Just think! I have lived here all these years, a very poor man, and raised my family in poverty and ignorance, all the time working hard, without success, and if I had only known what you tell me I would be rich and my children could have had an education and social advantages which have been denied them."

Every farmer should know the kind of soil he is farming; should learn how to avoid robbing it; should learn how to feed it; so that instead of getting poorer every year his soil will be getting continually better.

You can do it, Mr. Farmer, by reading such books as "The Story of the Soil."

Cyril G. Hopkins, the Author of "The Story of the Soil," is acknowledged authority on Soil Culture of the University of Illinois, author of "Soil Fertility and Permanent Agriculture," etc.

Every scientific farmer and every student of the soil, and everybody who wants to know how to make things grow to perfection should read Mr. Hopkins' Masterpiece, a new book, entitled "The Story of the Soil," a handsome volume, elegantly bound in cloth, containing 350 pages, size 5x7½ inches, illustrated—sells for \$1.50.

GLEANINGS specially desires that every one of its subscribers read this book, and become familiar with the knowledge of the soil and suggestions of this great man.

We have arranged with the publishers to get this book for you at factory cost, and will send it to you by mail, postpaid, and a year's subscription to GLEANINGS both for \$1.50. Address

Honey Markets

The prices listed below are intended to represent, as nearly as possible, the average market prices at which honey and beeswax are selling at the time of the report in the city mentioned. Unless otherwise stated, this is the price at which sales are being made by commission merchants or by producers direct to the retail merchant. When sales are made by commission merchants the usual commission (from five to ten per cent), cartage, and freight will be deducted; and in addition there is often a charge for storage by the commission merchant. When sales are made by the producer direct to the retailer, commission and storage, and other charges, are eliminated. Sales made to wholesale houses are usually about ten per cent less than those to retail merchants.

EASTERN GRADING RULES FOR COMB HONEY.

FANCY.—All sections well filled, combs straight, firmly attached to all four sides, the combs unsoiled by travel-stain or otherwise, all the cells sealed except an occasional one, the outside surface of the wood well scraped of propolis.

A No. 1.—All sections well filled except the row of cells next to the wood; combs straight; one-eighth part of comb surface soiled, or the entire surface slightly soiled; the outside surface of the wood well scraped of propolis.

No. 1.—All sections well filled except the row of cells next to the wood; combs comparatively even; one-eighth part of comb surface soiled, or the entire surface slightly soiled.

No. 2.—Three-fourths of the total surface must be filled and sealed.

No. 3.—Must weigh at least half as much as a full-weight section.

In addition to this the honey is to be classified according to color, using the terms white, amber, and dark; that is, there will be "Fancy white," "No. 1 Dark," etc.

NEW COMB-HONEY GRADING-RULES ADOPTED BY THE COLORADO STATE BEE-KEEPERS' ASSOCIATION.

No. 1 WHITE.—Sections to be well filled and evenly capped except the outside row, next to the wood; honey white or slightly amber, comb and cappings white, and not projecting beyond the wood; wood to be well cleaned; cases of separated honey to average 21 pounds net per case of 24 sections, no section in this grade to weigh less than 13½ ounces.

Cases of half-separated honey to average not less than 22 pounds net per case of 24 sections.

Cases of unseparated honey to average not less than 23 pounds net per case of 24 sections.

No. 1 LIGHT AMBER.—Sections to be well filled and evenly capped, except the outside row, next to the wood; honey white or light amber; comb and cappings from white to off color, but not dark; comb not projecting beyond the wood; wood to be well cleaned.

Cases of separated honey to average 21 pounds net per case of 24 sections; no section in this grade to weigh less than 13½ ounces.

Cases of half-separated honey to average not less than 22 pounds net per case of 24 sections.

Cases of unseparated honey to average not less than 23 pounds net per case of 24 sections.

No. 2.—This includes all white honey, and amber honey not included in the above grades; sections to be fairly well filled and capped, no more than 25 un-

capped cells, exclusive of outside row, permitted in this grade, wood to be well cleaned, no section in this grade to weigh less than 12 ounces.

Cases of separated honey to average not less than 19 pounds net.

Cases of half-separated honey to average not less than 20 pounds net per case of 24 sections.

Cases of unseparated honey to average not less than 21 pounds net per case of 24 sections.

BOSTON.—We quote fancy white comb at 17 to 18; light amber, 15; amber, 14; fancy white extracted, 10 to 11; light amber, 9 to 10; amber, 9. Beeswax, 30. Boston, March 18. **BLAKE-LEE CO.**

DENVER.—We have no comb honey to quote. Our market is entirely cleaned up. Our jobbing quotations on white extracted are 9 cts.; light amber, 8; strained, 6¾ to 7½. We pay 26 cts. in cash or 28 in trade for clean yellow beeswax delivered here.

THE COLORADO HONEY-PRODUCERS' ASSO'N.
Denver, March 20. **F. Rauchfuss, Manager.**

CINCINNATI.—The market on comb honey is about cleaned up. No. 1 white is selling in a jobbing way at \$3.65 per case, or \$4.00 retail. Light-amber extracted in barrels brings 7; in cans, 7½ to 8; white extracted in 60-lb. cans, 10. Beeswax is in fair demand at \$33.00 per 100 lbs. The above are our selling prices, not what we are paying.

Cincinnati, March 22. **C. H. W. WEBER & Co.**

ZANESVILLE.—The market is quiet, with supply fully equal to the demand. White comb of best quality brings 20 cts. wholesale; extracted in 60-lb. cans, 11 to 12. The principal demand for extracted at this time is in 1-lb. and 6-oz. glass packages, which are quoted at \$2.25 and 90 cents per dozen respectively. For beeswax, producers are offered 29 cts. in cash or 31 in exchange for bee supplies.

Zanesville, O., March 21. **E. W. PEIRCE.**

LIVERPOOL.—Since our last report our markets for honey and beeswax have continued firm, with business restricted by small supplies. Retail sales of pile 1 Chilean honey have been made at \$7.92, and pile 2 at \$6.84. The stock is now almost cleared out. There is a fair quantity of Californian to be had at \$10.08 to \$10.80, and 65 cases have been sold the last few days within these limits. Stocks of other descriptions have sold at different quotations as follows: Haitian, \$5.76 to \$7.20; Peruvian, \$3.84 to \$4.80; Chilean, \$5.52 to \$8.16; Jamaican, \$6.24 to \$7.68; Californian, \$9.60 to \$12.92. There is very little Chilean beeswax offering; and we think that, by the end of next month, the stock will be exhausted. In the mean time, until the new Chilean wax comes in, about May, Haiti should find a good market. Sales, 25 bags of Chilean at \$36.88 to \$37.78. Quotations for other descriptions are as follows: African, \$32.16 to \$34.48; Jamaican, \$37.72; West Indian, \$32.64 to \$36.28.

Liverpool, March 15. **TAYLOR & Co.**

Continued on page 5.

Mr. New Beeman.—"Well, well, nailing up your beehives already? Aren't you rather early?"

Mr. Successful Beeman.—"Now, then, that is just where so many make their mistake: they wait until the last moment and then rush and buy anything they can get. You have often asked me the secret of my successful beekeeping. Well, listen! I order early, buy the **best beehives and supplies** on the market, nail them up, and then I am ready for the bees. All my supplies come from

THE FRED W. MUTH CO.

"The Busy Bee Men."
Send for catalog.

51 Walnut Street.

Cincinnati, Ohio.

AS A SHIPPING POINT CINCINNATI CAN NOT BE EXCELLED

for this section of the country. We are located on the great trunk lines for points south of us, and orders received from this territory are shipped out at once on direct routes so that customers are assured of prompt service and a minimum charge for transportation.

Coupled with the advantages offered by these resources is the service we maintain for our patrons. At this season of the year our stocks are complete, and we are making extra efforts to handle orders with the greatest dispatch possible, so that there may be absolutely no delays in filling hurry orders. Our long experience in the supply business enables us to anticipate your wants to such an extent that we have included your order with ours to the factory, so we are simply waiting your instructions to get them started to you.

For the small beekeeper, and those who have a part of the supplies they will need for the coming season, we have goods put up in small original packages. For instance, there is foundation of all grades packed at the factory in one, two, three, four, and five pound cartons. Sections of all standard sizes in cartons of 100, 250, and boxes of 500.

These small packages enable the beekeeper to buy in quantities just suited to his needs, with the assurance that the goods will reach him in the best condition possible, and with no loss on account of a broken package.

If you have lost some bees the past winter, don't be discouraged, but prepare to make the very most of those you have left, or to replenish your hives, for the coming season is bound to be a good one; and if there has been quite a loss in your vicinity there will be all the more nectar for your bees to gather. Be sure that the season finds you prepared to give them plenty of room in which to store the harvest when it comes.

If you haven't had your catalog from us, there is one ready to mail if you will give us your present address.

Unoccupied Bee Range ... 80 Miles Long

I am situated at the junction of the Gila and San Pedro Rivers, in Central Arizona, and for 80 miles south up the San Pedro River is unoccupied bee range of Mesquite, etc. Any three miles of the San Pedro Valley will support 150 colonies or more. Any location would be good for raising early queens. I have for sale, located three miles from a railroad, 40 acres of unimproved fruit land and 110 colonies of bees in Langstroth hives that I run for extracted honey; also good extracting outfit. I sell all my honey at a mining town four miles from home. I have lots of calls for comb honey. Will sell at a very low figure. If you want to buy, write to

C. K. Wilcox
Winkelman, Arizona

Honey Markets, continued from page 2.

CHICAGO.—The sale of honey so far this month has been only moderate; and while the stocks were light in quantity at the beginning of the season, they are rather heavy at the close. This may be attributed in part to the cry that went out last autumn that honey was very scarce, and would be high in price, thus making the more or less steady consumers feel that they could not afford to buy of the crop of 1911. Prices are unchanged from our last quotation, but the volume of sales is less. Beeswax is taken readily at 30 to 32.

Chicago, March 18.

R. A. BURNETT & Co.

NEW YORK.—We have practically nothing new to report. The market remains in about the same condition. Comb honey is well cleaned up, and what few small lots arrive find ready sale at former prices. Extracted is not moving very fast. There is a plentiful supply of all grades excepting California water-white and white sage, which is pretty well cleaned up. Prices remain about the same as in our former report; but in quantity lots even these prices have to be shaded in order to effect sales. Beeswax is steady at 30 to 31.

New York, March 18. HILDRETH & SEGELKIN.

ST. LOUIS.—Since our report of March 4 our honey market has remained unchanged. The stocks of comb honey are light, and the supply of extracted honey is abundant but not burdensome. We quote fancy white comb honey at 17 cts.; No. 1, 15 to 16; light amber, 13 to 14; dark, 8 to 11. Broken and leaking honey sells at much less. Extracted light-amber California brings 8½ to 9; Southern light amber, 8 to 8½ in five-gallon cans; Southern in barrels, 7 to 7½ for light amber. Beeswax, prime, 30; impure and inferior, less.

R. HARTMANN PRODUCE CO.

St. Louis, March 18.

(Organized 1870)

Bee-keeper's Supplies

Sold in Central Michigan at let-live prices. Send for my 1912 prices and be convinced.

W. D. SOPER,

Jackson, Mich.

INDIANAPOLIS.—White comb sells at 18 cents in ten-case lots. Amber grades are in slow demand at lower figures. Best extracted sells at 11 to 12 in five-gallon cans. Jobbing houses are well stocked, but producers are not now offering any honey. Beeswax is in good demand, and producers are being paid 31 cts. per lb.

Indianapolis, March 18.

WALTER S. POWDER.

CINCINNATI.—There is a fair demand for both extracted and comb honey. We are selling the very best grade of comb honey at \$3.75 to \$4.00 a case; while for fancy extracted we are getting 9 to 11 cts., according to quality and quantity purchased. Amber honey in barrels is selling at 6 to 7½ cts. For strictly choice bright-yellow beeswax we are paying 30 cts. per lb. delivered here, and 1 to 2 cts. less for darker grades.

The Crisis

The next few weeks will be a critical period in the life of your bees. They have survived the rigors of a severe winter, but possibly with weakened vitality and depleted stores. From this time until the early honey-flow, brood-rearing will be well under way and the draft on their resources will be very heavy. Vigilance now is the price of success later. A little feeding and timely care will carry the bees safely over the crucial interval.

No less is this a crisis in the beekeeper's experience; for his action or inaction now in caring for his bees, ordering needed supplies, and preparing his equipment for the harvest, will determine to a certainty the measure of his success or failure.

Seasonable goods of all kinds—feeders, veils, gloves, smokers, hives, sections, foundation—any thing and every thing pertaining to bees—are here at OHIO'S BEE-SUPPLY CENTER immediately subject to your order. If your name is on our list of customers, you have already received the 1912 catalog or will receive one in a few days. An early order from you will be appreciated. Write, anyhow. Your letters are always welcome.

If you are not already a customer a large illustrated catalog of bee-supplies and specialties will be mailed you on request.

EDMUND W. PEIRCE

THE FRUIT-GROWER, Box 108, St. Joseph, Missouri

Why Not REAR Your Own QUEENS ? Doolittle's "Scientific Queen-Rearing" and the American Bee Journal for 1912—Both for Only \$1.00

Every Bee-keeper Should Have Both Book and Bee-Paper.

DOO LittLE'S "Scientific Queen-Rearing" book contains 126 pages, and is bound in leatherette with round corners. It tells in the clearest way possible just how the famous queen-breeder, Mr. G. M. Doolittle, rears the best of queen-bees in perfect accord with Nature's way. It is for both amateur and veteran in bee-keeping. As all know, Mr. Doolittle has spent some 40 years in rearing queens and producing honey. He has no superior as a queen-breeder. You can learn to rear fine queens by following his directions. Read up now before the bee season is here.

You will not regret having this book, which also gives his management of the bees for the production of honey.

The book, and the American Bee Journal for 1912, for only \$1.00, is certainly a big bargain for you. Send the \$1.00 now, and we will begin your subscription with January 1, 1912, and mail you the book. Sample copy of the Bee Journal free. Address

GEORGE W. YORK & CO.,

117 No. Jefferson St., Chicago, Ill.

BEE SMOKER

"If goods are wanted quick, send to Pouder."

(Twenty-third year.)

Swarming Time

Is not far off, and it would be well not to wait till the last minute, even though you do know where you can get the goods quick. I am supplying the entire needs of many successful beekeepers, and have been for years. Let me convince you that I can do the same for you. New goods from the Root factory are constantly being added to my stock, and I am shipping out the goods at the factory schedule of prices. If I have any displeased patrons I do not know about it, and your good will is a matter of considerable concern to me. My plea for your business is based on a straight business proposition—a saving to you in dollars and cents, finest and most accurate goods that can be produced, and prompt service.

Walter S. Pouder, dear Sir:—You may ship five more hives, same as last lot. The other five are now assembled and painted, and I am very proud of them. Thanking you for your prompt service,
Tipton, Ind.

JOHN D. SMITH, JR.

When you have your beeswax ready for shipment, please remember me and I will pay highest market price in cash or trade at any time

My new catalog contains much that is valuable to any one interested in bees, and it is free. In any event let me hear from you.

PUBLICATIONS ON BEE CULTURE

Please use coupon below, checking
the numbers of items wanted.

The pamphlets and booklets listed be-
low are of more than ordinary interest:

- 1 **My First Season's Experience with the Honey-bee.** By the "Spectator," of the *Outlook*, of New York. A ten-page leaflet detailing the experiences of this well-known writer. You will read the leaflet through before you lay it down. Free.
- 2 **The Bee-keeper and Fruit-grower.** A 15-page booklet giving actual facts regarding the value of bees to fruit, and showing how bee-keeping may be doubly profitable to the fruit-grower. Fruit-growers are realizing as never before the necessity of having honey-bees in close proximity to their blossoming fruit. Free.
- 3 **Bee-keeping for Sedentary Folk.** A 24-page leaflet reciting the actual experiences of an amateur bee-keeper, showing what equipment is best, points derived, etc. Free.
- 4 **Catalog of Bee-keepers' Supplies.** Our complete catalog will be mailed free to any address on request.
- 8 **Habits of the Honey-bee.** By Dr. E. F. Phillips. A somewhat scientific handling of the habits and anatomy of the bee. Price 10 cts.
- 9 **How to Keep Bees.** A book of 298 pages detailing in a most interesting manner the experience of a beginner in such a way as to help other beginners. Price \$1.00 postpaid.
- 10 **The A B C of Bee Culture.** A complete encyclopedia of bees, of 576 pages, fully illustrated, \$1.50 postpaid; half leather, \$2.
- 11 **Cleanings in Bee Culture.** A 64-page illustrated semi-monthly magazine, the leading exponent of bee culture in this country. Ten cents per issue, but to new subscribers we will furnish it six months for 25 cts.
- 12 **Back-yard Bee-keeping.** Six interesting lessons written in readable newspaper style. Many facts to encourage the "City Bound" man or woman with the back-to-the-land longing. Free.
- 15 **Truth About Sweet Clover.** Interesting booklet of nearly 100 pages. Tells of value of sweet clover for honey, for plowing under, as fertilizers of the soil, and food for horses, cattle, swine, sheep, etc. Free.

The coupon below may be used as an order sheet by properly checking the numbers of items wanted and adding your signature, and remittance, if required.

WITH OUR READERS AND ADVERTISERS

BUYING QUEENS.

Owing to a number of letters which have reached the advertising department in years past regarding subscribers' transactions with queen-breeders, we think it not out of place here to give our readers some idea of the difficulties under which queen-breeders work, and an idea as to what might reasonably be expected from the different classes of breeders.

In the first place, any breeder's ability to fill early orders promptly depends altogether upon weather conditions during the early spring months. Cold winds and unsettled weather make it impossible to rear quantities of queens successfully, and some of our best breeders are often two or three weeks late in getting started in spite of the most carefully laid plans. After breeding is well under way, a buyer may reasonably expect very prompt service from the older and larger breeders. Small breeders are sometimes handicapped by various conditions which will be explained later.

Most of our readers will recognize at a glance the older breeders, about whom there need be no question as to quality of stock or ability to fill orders promptly. The very fact that these breeders have advertised to a greater or less degree year after year establishes their reputation for fair dealing. It takes time and experience to develop the queen-rearing business to the stage where the breeder himself can be absolutely sure of the quality of his stock and his ability to handle orders satisfactorily.

On the other hand, new breeders and advertisers are constantly entering the fields who are worthy of attention; and oftentimes, if the buyer is willing to take a little risk as to quality of stock and ability to fill orders promptly, he may get something really good at a lower price. The queen-rearing business is, however, very uncertain for the small breeder, and he will often find himself embarrassed by lack of stock and inability to fill orders promptly in the rush season. This may be due to a variety of reasons. A breeder who has had some success in an amateur way sometimes decides to enter the commercial field—that complete equipment and rather larger facilities are necessary to handle even a small business successfully. Orders come in very rapidly sometimes during the rush season, and a breeder is caught short before he realizes that his equipment is too small to produce the results necessary to supply his trade satisfactorily. A sudden change in the weather may kill the larvæ; cold winds may prevent mating, with a consequent loss of virgins; a sudden dearth of honey may cause a lack of desirable drones. Lacking the experience necessary to guard against those conditions, salvation lies in promptly returning remittances sent, with a frank statement of the circumstances; for no beekeeper can afford to wait for queens in the height of the season; and, in our opinion, it is always well for the buyer to ask for a prompt return of the remittance unless the order can be filled at once. This obviates misunderstandings and delays.

We take pains not to admit advertisements of breeders until they have given us some information regarding their equipment and methods, and an assurance that they will fill orders promptly. Having done this we must ask our readers to be equally discriminating in sending in their orders.

Satisfactory Service and The Best Bee Supplies.

That is what we give our customers, and what we can give you if you will give us the chance. We keep a large and complete stock of Root's goods constantly on hand, and our largely increased facilities for handling goods make it possible to give every order the most prompt and careful attention. San Antonio is the shipping center of this section of the country. We can save time and freight, and get goods to you in better condition than to send to some more remote or less centrally located point. We base our claim for service, and the quality of our goods, not alone on what we think we can give you, but what our customers have had from us for years past. Just recently Mr. J. A. Simmons, of Sabinal, wrote us as follows:

As I have been using your supplies since March, 1903, I do not hesitate to commend you and the supplies you handle. Mistakes, a few have been made, but were cheerfully corrected. As I have nearly 500 colonies, I should know.

We have many more letters with equally good reports.

Catalog on request, also quotations made on large lists.

Weed Process Foundation.

We are running our new plant day and night and are able to supply the very best grade of foundation very promptly, and at prices which we are sure will please you. A customer writing a day or two ago about this says:

The foundation you worked for me has been received. Your work is perfect, and in those cartons it is so convenient for the retail trade.

We can use your wax at current prices if you have more than you want worked into foundation for this season's use.

Queens.

Untested, April 10 to May 10, \$1.00 each. Tested, March 1 to April 10, \$1.25 each. Selected tested, March 1 to April 10, \$2.00 each. Breeding queens, the very best, April 1 to December 1, \$5.00.

No-drip Shipping Cases.

A big stock of these on hand at low prices. Write for particulars. It will pay you to get our prices.

Topperwein & Mayfield,

Corner Nolan and Cherry Sts.

San Antonio, Texas.

I have for sale the

Three-banded Italians and the Goldens

at the following prices: Untested of either strain, 90 cts. each; 12 for \$9.00; \$65.00 for 100. Tested, for either strain, \$1.00 each, or 12 for \$10.00; \$75.00 for 100.

I have some fine three-banded breeders for \$5.00 each.

Plenty of Queens ready to Mail Now.

I guarantee satisfaction of all queens purchased of me.

I use the best-known methods of rearing queens.

I have high-grade breeding queens of The A. I. Root strain and other prominent breeders.

I have won several first prizes on my bees, and took both of the first on the three bands and goldens at Dallas State Fair at Dallas, Texas, in 1911.

An International Auto Wagon Will Earn Its Keep on Your Farm

IT is in the seasons when your horses are all needed in the field or when the weather is most unfavorable for driving, that the International auto wagon shows its real worth. It is always ready to take the milk or cream to the creamery, deliver produce and fruit, bring your purchases from town, or take the children to school.

With it you can oversee the farm, do all light hauling, visit any friend within thirty miles, take the family driving or to church.

International Auto Wagons

are sturdy, every-day workers. The frame, axles and wheels are strong enough to carry any load the wagon should hold, over any road. The 20-H. P engine has power enough to meet any road emergency. The transmission gives two forward speeds and reverse, with no danger of stripping gears. The brakes are powerful.

The International auto wagon is just the car for farmers. See the I H C local dealer and get facts, figures, and catalogues from him, or, write

Automobile Owners.....

O'Neil Tire Protectors

eliminate practically all your punctures and absolutely prevent blow-outs. They assure the use of your tires until the last layer of fabric is reached.

You can remove them from one casing to another, because there is practically no "wear out" to them.

The O'NEIL fits inside the casing, nice and smooth, right down to the bead, forming a casing within a casing.

Puncture Proof.....

You know how hard it is to drive a nail through a wall when it hits a loose, flexible lath. The same principle applies when a nail goes through the tread of a tire. It hits the O'NEIL which gives and protects the inner tube. As the wheel revolves, the nail is deflected and rendered harmless.

If you are interested in saving time and money, and getting *double the mileage* out of your tires, write us today for our free "TIRE PROTECTOR BOOK."

PAINT WITHOUT OIL

Remarkable Discovery that Cuts Down the Cost of Paint Seventy-five Per Cent.

A Free Trial Package is Mailed to Every One Who Writes.

A. L. Rice, a prominent manufacturer of Adams, N. Y., has discovered a process of making a new kind of paint without the use of oil. He calls it Powderpaint. It comes in the form of a dry powder and all that is required is cold water to make a paint weather-proof, fire-proof, and as durable as oil paint. It adheres to any surface, wood, stone, or brick, spreads and looks like oil paint, and costs about one-fourth as much.

Write to Mr. A. L. Rice, Manufacturer, 8 North St., Adams, N. Y., and he will send you a free trial package, also color-card and full information showing you how you can save a good many dollars. Write to-day.

KITSELMAN FENCE

Sold direct to you at factory prices on **30 days trial**. Save the dealers profit. Farm, Hog and Poultry Fence at from **11 1/2 CENTS A ROD UP**. True-to-Name Catalpa Trees Ten times your money back if not true species. Also Catalpa Seed. Cypress trees, most beautiful in the world. Free booklet. H. C. ROGERS, Box 113 Mechanicsburg, Ohio

ROOT'S BEEKEEPERS SUPPLIES

You may have a catalog of supplies; but if you haven't ours for 1912 you have missed something really worth while, and should get one at once. It is the largest and most complete ever published—more than a mere price list of supplies—a book that every beekeeper can read with pleasure and profit. Beginners will find answers to many perplexing questions, and advanced beekeepers timely suggestions that will save them money. Old customers are writing us frequently letters like the following:

Your catalog for 1912, designated ROOT'S BEEKEEPERS' SUPPLIES, is received, and I certainly thank you for this book. I have had your catalog on my desk for years, and have used Root's supplies all along. I note the enlargement and improvement in your new catalog, and notice many things I expect to add to my apiary. C. W. Cox, Crystal City, Texas.

Our catalog this season also gives a full and complete list of books and booklets which we can supply. Many of these booklets are free, which doesn't mean that they are not worth reading, but simply that we want you to be informed on the subjects of which they treat. Send for a catalog, and check those in which you are interested.

Quick Deliveries

Next to having the best goods made, there is nothing so important to the beekeeper in the busy season as to have goods delivered just when they are wanted most. It isn't always possible to ship goods from a distant factory and have them reach destination within a day or two, as is sometimes necessary during the height of the season, but with distributing-houses located in the large shipping-centers we are able to supply beekeepers everywhere, with no loss of time and with minimum transportation charges.

Send Your Hurry Orders

to any one of the offices listed below, and let us show you what we can do for you in point of service. Cars are going to these branches at the rate of two or three a week, so the stocks are new and fresh, and we usually have just what you want. If it isn't in stock at your nearest branch our manager will include your order with his specifications and you may have your goods come in the next car, thereby saving on transportation charges and getting the goods in better shape than you would by local freight.

Whatever Your Wants

we can supply you, and, of course, there is no question about the quality of our goods. The name "ROOT" in connection with bee-supplies means the best of every thing in this line, and the best is always the cheapest, as our customers will testify. If you have never used our supplies you should make a trial of them this season. Once used, we are sure you will want no other.

I have just received my goods, order No. 10,739. I am more than pleased with them. I had intended to make my hives, but when I received the sample hive and saw the No. 1 pine lumber from which it was made, and considering the workmanship, I am satisfied I can buy cheaper than I can make them; enough cheaper to save the price of the lumber. O. C. MILLS, Barton Ldg., Vt.

GET THESE MONEY-MAKING SECRETS with FARM JOURNAL

*Is this cock properly held?
"Poultry Secrets" tells
how to carry fowls, and
many other secrets far
more important.*

For \$1.00 you can get now not only the **FARM JOURNAL** for **FOUR** full years, but also your choice of any one of our famous booklets, "Money-making Secrets" that other people have bought by the **HUNDRED THOUSAND**.

Just note what the information given in one of them, "The Million Egg-Farm," did for Robert Liddle, a clerk of Scranton, Pa.

In May, 1910, Robert bought 2300 day-old chicks. He spent just one week studying the methods now given in this book. This was his only preparation for the business. Result this "greenhorn" raised 95 per cent of all his chicks—a most uncommon record! Of these, 1350 proved to be pullets. In less than seven months he was getting 425 eggs daily, and selling them at 58 cents a dozen. His feed cost aver aged \$4.00 a day, leaving him **OVER \$17.00 A DAY PROFIT**—and this before *all* his pullets had begun laying.

Isn't "Money-making Secrets" a good name for such booklets?

Read what people say of the other booklets, and of the **FARM JOURNAL** itself:—

"I find your Egg-Book worth untold dollars," says **ROY CHANEY**, Illinois. "What it tells would take a beginner years to learn."

"I am much pleased with the Butter Book," writes **F. J. DICKSON**, Illinois, "and would like to know how I could secure 300 copies, one for each patron of our creamery."

"Duck Dollars is the best book I ever had on duck-raising," says **F. M. WARNOCK**, Pennsylvania.

"If your other booklets contain as much valuable information as the Egg-Book I would consider them cheap at double the price," says **F. W. MANSFIELD**, New York.

"I think your Egg-Book is a wonder," says **C. P. SHIREY**, Pennsylvania.

"The **FARM JOURNAL** beats them all," writes **T. H. POTTER**, Penn'a. "Every issue has reminders and ideas worth a year's subscription."

"One year I took another agricultural paper," says **N. M. GLADWIN**, Washington, "and it took a whole column to tell what **FARM JOURNAL** tells in one paragraph."

"If I could get as good interest on every dollar as I get from the **FARM JOURNAL**, I would soon be a millionaire," says **A. W. WEITZEL**, Pennsylvania.

"**FARM JOURNAL** is good for the man behind the counter, as well as the man in the field," says **J. I. SLOAT**, a Virginia bank clerk.

MONEY-MAKING SECRETS

These booklets are 6 by 9 inches, all profusely illustrated

POULTRY SECRETS is a great collection of discoveries and methods of successful poultrymen. It gives **Farm's** famous mating chart, the Curtiss method of securing 50 per cent more pullets than cockerels. Boyer's method of insuring fertility, with priceless secrets of mating, breeding, feed and feeding, how to produce winter eggs, and others long jealously guarded, now first published.

HORSE SECRETS exposes the methods of "bishopsing," "plugging," cocaine and gasoline doping, and other tricks of "gypsies" and swindlers, and enables any one to **TELL AN UNSOUND HORSE**. It also gives many valuable training, feeding, breeding, and veterinary secrets.

THE MILLION EGG-FARM tells all of the methods by which **J. M. Foster** makes over **\$18,000 A YEAR**, mainly from eggs. Back-yard chicken-raisers, learn all about the "Rancocas Unit," and how **Foster FEEDS** his hens to make them produce such quantities of eggs, especially in winter.

CORN SECRETS, the great **NEW** hand-book of **Prof. Holden**, the "Corn King," tells how to get ten to **TWENTY BUSHELS MORE PER ACRE** of corn rich in protein and the best stock-feeding elements. Pictures make every process plain.

THE "BUTTER BOOK" tells of seven cows that produced **HALF A TON OF BUTTER** each year (140 pounds is the average). An eye-opener for dairymen. Get it, weed out your poor cows, and turn good ones into record-breakers.

GARDEN GOLD shows how to make your back-yard supply fresh vegetables and fruit, how to cut down your grocery bills, keep a better table, and get cash for your surplus. It tells how to plant, cultivate, harvest, and market.

DUCK DOLLARS tells how the great **Weber** duck-farm near Boston makes every year 50 cents each on 40,000 ducklings. Tells why ducks pay them better than chickens, and just how they do everything.

TURKEY SECRETS, the latest authority on turkey-raising, discloses fully the methods of **Horace Vose**, the famous Rhode Island "turkey man" who supplies the wonderful Thanksgiving turkeys for the White House. It tells how to mate, to set eggs to hatch, to feed and care for the young, to prevent sickness, to fatten, and how to make a turkey-ranch **PAY**.

Gleanings in Bee Culture Great Combination Offer

By special arrangement with the publishers, for a limited time we can offer the **FARM JOURNAL FIVE** years and **GLEANINGS IN BEE CULTURE** one year in advance, **BOTH FOR \$1.00**. Or **FARM JOURNAL FOUR** years and any one of the booklets, "Money-making Secrets," with **GLEANINGS** for **ALL THREE for \$1.00** one year . . .

This price is good for a few weeks only, and may be increased at any time without notice.

Any subscriber who is in arrears for either paper can take advantage of this offer by paying up in full to date, and adding \$1.00 for the combination.

GLEANINGS IN BEE CULTURE, Medina, Ohio.

Enclosed find \$1.00 for which send **GLEANINGS** for one year and **FARM JOURNAL** for five years, or for four years with this booklet. to this address:

Address

The books listed below ought to be of interest to every one who has a small patch of ground to cultivate or a wish to develop some-thing in this line. These books are all in stock, and orders can go out by first mail.

The A B C of Potato Culture

BY T. B. TERRY AND A. I. ROOT.

Mr. A. I. Root devoted a large part of his time during the summer of 1911 to revising the Potato Book which he wrote in collaboration with Mr. Terry 25 years ago. During the winter the 8th edition of 10,000 copies has been printed. Speaking of this valuable book, and of Mr. Terry, Mr. Root recently had to say:—"It will pay almost every man, woman, and child to read Terry's potato-book, no matter whether you ever did or ever will grow any potatoes or not. If you have read Terry's recent book, "How to Keep Well and Live Long," you will know that he is a student of nature, and a deliver after God's gifts and God's secrets; and this potato-book, on every page, shows his remarkable gift. He is a philosopher of modern date; and his love for God's gifts, as well as his love for his fellow-men, shines out on every page. His studies of potatoes, it occurs to me, paved the way in his explorations in his later work in regard to how we should live, and keep our health." Contains nearly 400 pages, well illustrated, paper bound, 57c each postpaid. Cloth bound, 85c each, postpaid. (Deduct 7c if ordered sent with freight or express shipment.

How to Keep Well and Live Long

BY T. B. TERRY.

I am still gaining. That is what T. B. Terry says to-day, when he is 67 years old, after being so broken in health at 40 years of age that all the doctors who saw him and tried to help him gave him up to die. But Mr. Terry got well by working out his own cure. He tells all about it in his great health book, *How to Keep Well and Live Long*.

There is no other book like it in the world. You don't need to know medical words or medicines to understand it. It is written clearly and simply and has back of it the personal experience which tried and proved every step of the way to a long and healthy life. You can follow the same way. The book is only one year old, but over 5150 copies of it to date are making men and women healthier and happier because they have read and followed the teachings of its pages.

Nearly a thousand copies of this helpful book have been distributed through the publishers of "GLEANINGS IN BEE CULTURE," and not a single reader has expressed regret at his bargain. Mr. A. I. Root heartily endorses Mr. Terry's writings on health subjects. Contains 220 pages, substantially bound in cloth; \$1.00 per copy postpaid.

The Dollar Hen

"Every few days the friends write me, asking what poultry-book they had better purchase—which one I would recommend above all others, etc. Well, to get right down to it there is no *best* poultry-book. There are many good ones, but no one book contains *all* that is good. The one that is most emphatic against humbugs and frauds, especially costly medicines for dosing chickens, etc., is the one I have frequently referred to, "The Dollar Hen," by Milo M. Hastings.

The Dollar Hen is a real book, substantially bound—not a paper-bound pamphlet of "System," "Secrets," or "Methods," but a book worth several dollars of any poultryman's money. "The Dollar Hen" is a vast fund of valuable information that required much time, expense, and effort. Contains more than 200 pages; price postpaid \$1.00 per copy.

A B C of Strawberry Culture

Fully illustrated, 235 pages: Price 45c; by mail, 5c extra; cloth, 68c; by mail, 75c. New edition, revised and enlarged. This is also one of Terry's and has received some very high words of praise. Who that keeps honeybees does not also have a little garden patch? If you would learn to raise in it that most luscious of all fruits, the strawberry, with the best results, you can not be without this little book. Even if you don't grow strawberries you will be the better for reading it.

Tomato Culture

In three parts. By J. W. Day, D. Cummins, and A. I. Root; a most valuable treatise, embracing field culture, forcing under glass, and raising plants for market. Valuable to any one raising garden stuff of any kind aside from tomatoes. 150 pages illustrated. Price 35c; by mail 40c.

Tile Drainage

By W. I. Chamberlain. This is a valuable companion to our other rural books. It embraces the experience of 40 years of one of our foremost practical agriculturists, who has laid with his own hands over 15 miles of tile. Price 35c; mail, 40c.

Our Farming

By T. B. Terry. In which he tells "how we have made a run-down farm bring both profit and pleasure." This is a large book, 6x9 inches, 367 pages, quite fully illustrated. It is Terry's first large book; and while it touches on the topics treated in his smaller handbooks, it is sufficiently different so that no one will complain of repetition, even if he has read all of Terry's little books. We are so sure it will be worth many times its cost that we are not afraid to offer to take it back if any one feels he has not got his money's worth after he has read it. Price 75c; postage 10c. Same in paper covers, postpaid, 50c; by express or freight with other goods, 10c less.

What to Do, and How to be Happy while Doing It

The above book, by A. I. Root, is a compilation of papers published in *GLEANINGS IN BEE CULTURE*, in 1886, 1887, and 1888. The suggestions are principally about finding employment about your own homes. The book is mainly upon market-gardening, fruit culture, poultry-raising, etc. Price in paper covers, 50c; cloth, 75c. If ordered by freight or express, deduct 8 and 10c respectively.

Celery for Profit

The first really full and complete book on celery culture, at a moderate price, that we have had. It is full of pictures, and the whole thing is made so plain that a schoolboy ought to be able to grow paying crops at once without any assistance except from the book. 90 pages, paper bound. 27 cts. per copy postpaid.

Maple Sugar and the Sugar Bush

BY A. J. COOK.

Author of the *Beekeeper's Guide*. This practical book, written several years ago, remains the most popular treatise on procedure in the sugar-bush. Contains 40 pages size of this one—paper bound and illustrated. Price per copy, 28c postpaid.

A B C of Carp Culture

This is a work of 70 pages 7x10 written by Geo. Finley and A. I. Root, and the best authority on the subject of carp culture yet in print. The rearing of carp is a pleasant and profitable amusement. This book will tell you all about it. In paper covers. Price 25 cts.; by mail 5 cts. extra.

Winter Care of Horses and Cattle

This is T. B. Terry's second book in regard to farm matters; but it is so intimately connected with his potato book that it reads almost like a sequel to it. If you have only one horse or cow it will surely pay you to invest in this book. Forty-four pages; four illustrations. Price 25 cts.; by mail, 30 cts.

The A. I. Root Co., Medina, Ohio.

Classified Advertisements

Notices will be inserted in these classified columns at 25 cents per line. Advertisements intended for this department can not be less than two lines, and should not exceed five lines, and you must say you want your advertisement in the classified columns or we will not be responsible for errors.

QUIRIN-THE-QUEEN-BREEDER, Bellevue, O.

Special Notices

BY OUR BUSINESS MANAGER

We have about two tons of choice Michigan and New York State amber extracted honey in five-gallon cans. The largest part of the honey was gathered from clover, but we presume many of the producers were busy with other work so did not get it extracted until after the fall flows came on, so there is enough dark honey mixed with this to grade it amber. We offer it put up in the original packages of two five-gallon cans to the case, at 8½ cents per lb., delivered in good condition on board the cars at Medina. We seldom have a lot of honey as good as the above at such a low price. In ordering mention lot No. 107.

MAPLE SYRUP.

The weather conditions at this writing, March 25, are so very unfavorable that practically no maple syrup or sugar has been produced this year. We usually get a good run during the last two weeks of February. Yesterday we had a heavy fall of snow, and it now looks as if the cold weather would continue for an indefinite period. Many producers have not as yet tapped any trees. We regret that we shall be obliged to return all orders received to date unless the weather improves very much in the next ten days.

ALSIKE CLOVER SEED.

The time for seeding clover is here, and we can offer a limited quantity of good alsike seed for shipment from Stockport, Iowa, if ordered at once, bag included, at \$3.75 per peck; \$7.00 per half-bushel; \$13.75 per bushel, or two bushels for \$27.00. This is below the present wholesale market, and the offer is made only for prompt orders, and while the lot available lasts.

Beekeepers will find it profitable to encourage the sowing of alsike within range of their bees by paying a part of the cost of seed. Alsike, being much finer seed than medium clover, does not require as much to the acre, so that it is cheaper than any other kind at the present market price.

SWEET-CLOVER SEED.

Since our last issue we have secured over a ton of hulled white-sweet-clover seed at a price lower than the imported seed offered in our last issue. This enables us to offer it again at prices ruling early in the season. The imported seed has a rather fresher and plumper appearance than the home-grown lot we have secured. We are prepared to furnish either at the following prices:

In lots of—	1 lb.	10 lbs.	25 lb.	100 lb.
Hulled Yellow Annual (<i>Melilotus Indica</i>), per lb	15c	12c	11c	10c
Hulled White, impo'd seed	27c	24c	23c	22c
Hulled White, domes'c	25c	22c	21c	20c
Unhulled White (<i>Melilotus alba</i>) per lb.....	16c	14c	13c	12c

We can ship the imported from Medina or New York, and the domestic from Medina. We are sold out of the biennial yellow, but have a plentiful supply of annual yellow and unhulled white.

Convention Notices.

The North Texas Beekeepers' Association will hold its 31st meeting at Greenville, Texas, on the first Wednesday and Thursday in April, 1912. All beekeepers are cordially invited to attend. We are expecting to have a great meeting.

Greenville, Texas. W. H. WHITE, Sec.

The annual meeting of the Connecticut Beekeepers' Association will be held Saturday, April 13, 1912, at Y. M. C. A. building. Good speaking. The matter of forming a branch of the National Association will be considered.

Hartford. JAMES A. SMITH, Sec.

Inclosed find \$1.00 to renew my subscription to GLEANINGS. April 2, 1912, makes 30 years of subscription to it. Uncle Amos' side issue is worth all it cost, and more too.

Cuba, Ill., March 12.

M. W. MURPHEY.

Jackson

YOU can see the superb value in Jackson cars.

Model Thirty-two—\$1100

You see it in their size—their power—the ease with which they ride.

In the instant and willing response of their powerful motors—in their ability to cope with a difficult situation.

Fifty horsepower—which usually means \$3000 or more—is yours in the Jackson '52' for \$1800, supplemented by the long wheelbase (124 inches) and the big wheels and tires (36 x 4 inches) so necessary to comfort in a high-powered car.

Instead of the 30 horsepower that a price of \$1500 has always implied—40 horsepower in the Jackson '42' at that price; with wheelbase of 118 inches; 34 x 4 inch tires; and complete equipment of top, windshield, gas tanks, lamps, etc.

Jackson

And in the Jackson '32"—our \$1100 car—30 horsepower, 32-inch wheels, 110-inch wheelbase. Of the same high quality, in every detail, as the larger Jacksons.

Full elliptic springs, instead of the usual half or three quarter elliptic, on every Jackson car—simply another proof of the value already apparent.

A generosity of power, and size, and riding ease that, as a rule, is the especial attribute of the costliest cars.

And back of it all a progressive experience of more than ten years in the manufacture of good automobiles.

All we ask you to do is to go to the Jackson dealer and confirm what we have told you.

**Let us send you our complete
catalog, illustrated in two colors.**

Model 45—\$1650

"No Hill too Steep—No Sand too Deep"

Jackson Automobile Co.,
995 Main Street
Jackson, Mich.

Cartercars give perfect service for all drivers.

Both the novice and expert find the Cartercar delightful to drive over all kinds of roads. The simple, efficient construction means perfect response to the very easy control.

The most important feature of the Cartercar affording simplicity and efficiency is the patented Friction Transmission. It is composed of only two unit parts—a fiber-faced wheel and a friction disc.

The friction disc runs against the fiber-faced wheel, and their relative positions govern the speed of the car. This gives any number of speeds, and they are all controlled with one lever.

On the low speed the leverage afforded by this friction drive is so great that the car will do seemingly impossible things. It will actually climb a 50 per cent grade with a full load.

This tremendous power enables the Cartercar to travel roadways which would be im-

possible for the usual three-speed cars. It is impossible to stall the motor in bad muddy and sandy places.

To transmit the power to the rear axle, a chain-in-oil drive is employed. The chain runs in a constant oil bath; and all grit and dirt being kept out, wear is prevented.

Although these two features are largely responsible for the wonderful popularity of the Cartercar, yet it has every modern idea of automobile construction, such as full floating rear axle, valve-encased motor, long wheel base, large wheels, etc.

The equipment is absolutely complete, including self-starter, speedometer, gas-tank, windshield, top, top-cover, trunk-rack, five lamps, tonneau mat, robe-rail, tools, etc. Prices range from \$1200 to \$2100.

Send for complete information about this famous car, and where you can secure demonstration.

Cartercar Company,

Pontiac, Michigan.

Gleanings in Bee Culture

VOL. XL. • APRIL 15, 1912, NO. 8

Special CLUBBING OFFER

Koeth's Kombination Kit is an arrangement whereby one pair of plier handles is made to serve a number of different tools which come as sets of heads. By an interlocking device the handles may be fastened readily to any set of heads; and each part being interchangeable, the heads may be combined so that as many as fifteen or more different tools may be formed. The elimination of many different handles makes a saving in cost, convenience, and weight that will be appreciated by every one who uses tools.

It is on the same plan as one brace for a set of bits, one handle for one set of taps and dies; and there is no more object in having handles for all the plier-like tools than having a brace welded to each separate bit.

This set consists of one pair of handles and six sets of heads, which give the following tools, ranging from ten to eleven inches in length: Pincers, End-cutting Pliers, Harness, Belt, and Leather Punch, Pruning Shears, Tinners' Snips, Pliers, Wire Cutters, Adjustable Alligator Wrench, Pipe Tongs, Nut Crackers, Screw-driver, Tack Puller, Nail Puller, Calipers and Dividers. The heads are of tool steel, drop-forged, ground, tempered, and highly polished. The handles are of steel, ground and polished, and are finished in blue or polished nickel. Each tool is fully warranted.

The Kit is invaluable for mechanics, plumbers, farmers, bicyclists, automobilists, or any man who ever lays hand to tools.

Leather Shears

Double-Header Wrench
3/8 and 1/2 inch pipe

Pipe Wrench
3/8 and 1/2 inch pipe, etc.

Pipe Wrench
For a close place

Wrench for Nickel-Plated Pipe
Small size

Wrench for Nickel-Plated Pipe
Doesn't tear the nickel. Fold paper several thicknesses and put around the pipe.

NIPPERS

One of the most useful of the heads. It is of the same shape and design as ordinary nippers.

TIN SNIPS

Are nicely beveled and made especially strong. The reversible spring on the handles makes a noticeable addition to their utility. The wing nut furnishes a tension which will make it possible so to adjust these blades that they will cut various thicknesses ranging from tissue paper to sheet iron.

PRUNING SHEARS

This head is finished up in the same manner as the Tin Snips, the only difference being in the shape of the blades. Should any part break through faulty construction, a new part is supplied without charge. If with much use a part wears out, at small cost a new part is supplied and the tool is again complete. By combining jaws of different sets many special

pliers or wrenches can be formed which will prove valuable in certain lines of business.

THE ALLIGATOR WRENCH

This head is adjustable, and adapted to a wide range of sizes. To engineers, pipemen, and machinists, this one tool is worth the cost of the entire set because of its adjustable features; and by assembling one-half of either the pincers or plier jaw with the ratchet portion of the Alligator jaw, a still wider range of work can be covered.

LEATHER PUNCH

The tubes of this punch are made of hexagon tempered tool steel in the following sizes: 3/32", 4/32", 5/32", which are securely fastened by means of an accurately cut thread, and all are interchangeable. Each Kit is equipped with one of the medium sizes of these tubes.

The entire Kit with Blue Handles, wrapped and packed in a midget tool chest with hard-wood sides and covers, finished in natural wood, with brass hinges and clasp, \$1.50. Sent by mail or express prepaid to any point in United States with GLEANINGS one year \$5.00.

Foreign Beekeepers

In nearly every foreign country we have an established distributor, and can supply the wants of foreign bee-keepers everywhere. In such localities as we are not represented, are always glad to take up the matter with those desiring to handle goods.

There are other dealers in many localities. Send us a list of 1912 requirements for quotation from our nearest dealer, or delivered if you desire.

RED CATALOG sent *postpaid*.

We have many interesting and instructive circulars including that concise beginners' treatise, Simplified Beekeeping, which we gladly mail postpaid upon request.

W. T. FALCONER MFG. COMPANY,

Where the good bee-hives come from

Factory--Falconer, N. Y.

117 North Jefferson St., Chicago, Ill.

Honey Markets

The prices listed below are intended to represent, as nearly as possible, the average market prices at which honey and beeswax are selling at the time of the report in the city mentioned. Unless otherwise stated, this is the price at which sales are being made by commission merchants or by producers direct to the retail merchant. When sales are made by commission merchants the usual commission (from five to ten per cent), cartage, and freight will be deducted; and in addition there is often a charge for storage by the commission merchant. When sales are made by the producer direct to the retailer, commission and storage, and other charges, are eliminated. Sales made to wholesale houses are usually about ten per cent less than those to retail merchants.

EASTERN GRADING RULES FOR COMB HONEY.

FANCY.—All sections well filled, combs straight, firmly attached to all four sides, the combs unsoiled by travel-stain or otherwise, all the cells sealed except an occasional one, the outside surface of the wood well scraped of propolis.

A No. 1.—All sections well filled except the row of cells next to the wood; combs straight; one-eighth part of comb surface soiled, or the entire surface slightly soiled; the outside surface of the wood well scraped of propolis.

No. 1.—All sections well filled except the row of cells next to the wood; combs comparatively even; one-eighth part of comb surface soiled, or the entire surface slightly soiled.

No. 2.—Three-fourths of the total surface must be filled and sealed.

No. 3.—Must weigh at least half as much as a full-weight section.

In addition to this the honey is to be classified according to color, using the terms white, amber, and dark; that is, there will be "Fancy white," "No. 1 Dark," etc.

NEW COMB-HONEY GRADING-RULES ADOPTED BY THE COLORADO STATE BEE-KEEPERS' ASSOCIATION.

No. 1 WHITE.—Sections to be well filled and evenly capped except the outside row, next to the wood; honey white or slightly amber, comb and cappings white, and not projecting beyond the wood; wood to be well cleaned; cases of separated honey to average 21 pounds net per case of 24 sections, no section in this grade to weigh less than 13½ ounces.

Cases of half-separated honey to average not less than 22 pounds net per case of 24 sections.

Cases of unseparated honey to average not less than 23 pounds net per case of 24 sections.

No. 1 LIGHT AMBER.—Sections to be well filled and evenly capped, except the outside row, next to the wood; honey white or light amber; comb and cappings from white to off color, but not dark; comb not projecting beyond the wood; wood to be well cleaned.

Cases of separated honey to average 21 pounds net per case of 24 sections; no section in this grade to weigh less than 13½ ounces.

Cases of half-separated honey to average not less than 22 pounds net per case of 24 sections.

Cases of unseparated honey to average not less than 23 pounds net per case of 24 sections.

No. 2.—This includes all white honey, and amber honey not included in the above grades; sections to be fairly well filled and capped, no more than 25 un-

capped cells, exclusive of outside row, permitted in this grade, wood to be well cleaned, no section in this grade to weigh less than 12 ounces.

Cases of separated honey to average not less than 19 pounds net.

Cases of half-separated honey to average not less than 20 pounds net per case of 24 sections.

Cases of unseparated honey to average not less than 21 pounds net per case of 24 sections.

BOSTON.—We quote fancy white comb at 17 to 18; light amber, 15; amber, 14; fancy white extracted, 10 to 11; light amber, 9 to 10; amber, 9. Beeswax, 30. Boston, April 4. **BLAKE-LEE CO.**

ALBANY.—The honey market is slow, with no receipts of comb honey to sell at any price. Extracted is dull, and prices are weak at 6 to 6½ for buckwheat extracted.

Albany, April 3.

H. R. WRIGHT.

DENVER.—We have no comb honey to quote. Our market is entirely cleaned up. Our jobbing quotations on white extracted are 9 cts.; light amber, 8; strained, 6½ to 7½. We pay 26 cts. in cash or 28 in trade for clean yellow beeswax delivered here.

THE COLORADO HONEY-PRODUCERS' ASSO'N,
Denver, April 4. **F. Rauchfuss, Manager.**

INDIANAPOLIS.—White comb sells at 18 cents in ten-case lots. Amber grades are in slow demand at lower figures. Best extracted sells at 11 to 12 in five-gallon cans. Jobbing houses are well stocked, but producers are not now offering any honey. Beeswax is in good demand, and producers are being paid 31 cts. per lb.

Indianapolis, April 2.

WALTER S. POWDER.

ZANESVILLE.—The effect of voting back the saloons in Muskingum and adjacent counties last December is becoming very marked, local business generally being demoralized, the honey trade, of course, sharing in the general depression. Though weather conditions have improved perceptibly, which ought to stimulate the demand, sales for three weeks past have been exceptionally light—no change in prices since last quotations—20 cents for best grades of white comb, and 11 to 12 for best white extracted in 60-lb. cans. Producers are offered for beeswax 29 cts. in cash, or 31 in exchange for bee-supplies.

Zanesville, O., April 3.

E. W. PEIRCE.

ST. LOUIS.—There is nothing new to report in our honey market. The stocks of all grades of honey are small, and comb honey is almost exhausted; so the quotations are more or less nominal on both grades. We quote fancy white comb honey at 16 to 17; No. 1 white, 15 to 16; light amber, 13 to 14; dark, 8 to 11. Broken and leaking honey sells at much less. Extracted light-amber California brings 8½ to 9; Southern light amber, 8 to 8½ in five-gallon cans; Southern in barrels and half-barrels, 7 to 7½ for light amber. Dark sells for less. Beeswax, prime, brings 30 cts. per lb.; impure and inferior, less.

R. HARTMANN PRODUCE COMPANY,
St. Louis, April 5.

We pay highest cash price for Honey and Beeswax.

THE FRED W. MUTH CO.

"THE BUSY BEE MEN"

51 WALNUT STREET

CINCINNATI, OHIO

AS A SHIPPING POINT CINCINNATI CAN NOT BE EXCELLED

for this section of the country. We are located on the great trunk lines for points south of us, and orders received from this territory are shipped out at once on direct routes so that customers are assured of prompt service and a minimum charge for transportation.

Coupled with the advantages offered by these resources is the service we maintain for our patrons. At this season of the year our stocks are complete, and we are making extra efforts to handle orders with the greatest dispatch possible, so that there may be absolutely no delays in filling hurry orders. Our long experience in the supply business enables us to anticipate your wants to such an extent that we have included your order with ours to the factory, so we are simply waiting your instructions to get them started to you.

For the small beekeeper, and those who have a part of the supplies they will need for the coming season, we have goods put up in small original packages. For instance, there is foundation of all grades packed at the factory in one, two, three, four, and five pound cartons. Sections of all standard sizes in cartons of 100, 250, and boxes of 500.

These small packages enable the beekeeper to buy in quantities just suited to his needs, with the assurance that the goods will reach him in the best condition possible, and with no loss on account of a broken package.

If you have lost some bees the past winter, don't be discouraged, but prepare to make the very most of those you have left, or to replenish your hives, for the coming season is bound to be a good one; and if there has been quite a loss in your vicinity there will be all the more nectar for your bees to gather. Be sure that the season finds you prepared to give them plenty of room in which to store the harvest when it comes.

If you haven't had your catalog from us, there is one ready to mail if you will give us your present address.

THE HOME CORRESPONDENCE SCHOOL

Dept. 493, Springfield, Mass.

Honey Markets, continued from page 2.

CHICAGO.—There are some sales effected in comb honey right along, but mostly to small buyers who are inclined to buy only from hand to mouth, and we do not look for much business in the honey line after May 1. Extracted honey is moving more freely, but trade on this commodity is not what it was a year ago. We still have some very fancy Utah water-white alfalfa extracted honey in stock; also fancy Southern California light-amber extracted in 60-lb. cans. Write for prices when in the market, stating quantity desired. We quote fancy and No. 1 white and light-amber Western alfalfa comb honey, packed in 24-section double-deck cases, glass fronts, 16; second quality, same as above, \$3.00 per case. No. 1 white Wisconsin clover comb honey, packed in 24-section flat cases, glass fronts, brings 16 to 17; choice quality and light-amber Wisconsin, same as above, 14 to 15. Medium amber and other inferior grades bring from 2 to 3 cts. per lb. less than the above prices. Bright pure beeswax is firm at from 30 to 32.

Chicago, April 3.

S. T. FISH & Co.

My Bees are as Good as Money can Buy

AND BRAINS PRODUCE. Three-banded and Golden Italians. Untested, 90c each, 12 for \$9, 100 for \$65; tested, \$1 each, 12 for \$10, 100 for \$75. Three-banded breeders at \$5 each. Satisfaction and prompt attention guaranteed.

For BEGINNERS and OLD-TIMERS

BEE BOOK

A full description of our 1912 line of Bee Supplies, together with prices. The book contains many helpful hints on raising bees. It will interest both beginners and experienced beekeepers. In the back is a list of questions and answers touching the important points of bee culture. It contains 64 pages of useful matter pertaining to apiary. Get one FREE.

How to Make Money in Bees

This splendid booklet contains hints for beginners that make the way easy to get started in bee culture. It tells how to select the bees and equipment, and guides him in such matters as swarming, hiving, feeding, wintering, guarding against diseases, etc. No beginner should start without one. It will cost nothing but a stamp to get it. The book is FREE.

The Crisis

The next few weeks will be a critical period in the life of your bees. They have survived the rigors of a severe winter, but possibly with weakened vitality and depleted stores. From this time until the early honey-flow, brood-rearing will be well under way and the draft on their resources will be very heavy. Vigilance now is the price of success later. A little feeding and timely care will carry the bees safely over the crucial interval.

No less is this a crisis in the beekeeper's experience; for his action or inaction now in caring for his bees, ordering needed supplies, and preparing his equipment for the harvest, will determine to a certainty the measure of his success or failure.

Seasonable goods of all kinds—feeders, veils, gloves, smokers, hives, sections, foundation—any thing and every thing appertaining to bees—are here at OHIO'S BEE-SUPPLY CENTER immediately subject to your order. If your name is on our list of customers, you have already received the 1912 catalog or will receive one in a few days. An early order from you will be appreciated. Write, anyhow. Your letters are always welcome.

If you are not already a customer a large illustrated catalog of bee-supplies and specialties will be mailed you on request.

EDMUND W. PEIRCE

Why Not REAR Your Own QUEENS?

Doolittle's "Scientific Queen-Rearing" and the American Bee Journal for 1912—Both for Only **\$1.00**

Every Bee-keeper Should Have Both Book and Bee-Paper.

DOO LittLE'S "Scientific Queen-Rearing" book contains 126 pages, and is bound in leatherette with round corners. It tells in the clearest way possible just how the famous queen-breeder, Mr. G. M. Doolittle, rears the best of queen-bees in perfect accord with Nature's way. It is for both a amateur and veteran in bee-keeping. As all know, Mr. Doolittle has spent some 40 years in rearing queens and producing honey. He has no superior as a queen-breeder. You can learn to rear fine queens by following his directions. Read up now before the bee season is here.

You will not regret having this book, which also gives his management of the bees for the production of honey.

The book, and the American Bee Journal for 1912, for only \$1.00, is certainly a big bargain for you. Send the \$1.00 now, and we will begin your subscription with January 1, 1912, and mail you the book. Sample copy of the Bee Journal free. Address

GEORGE W. YORK & CO.,

117 No. Jefferson St., Chicago, Ill.

New Stock

We already have received a large well-assorted stock of fine supplies for the coming season. We carry no dead or out-of-date stock in our warehouse. You can be sure of getting fresh, clean stock if you order of us.

CATALOGS: Our new catalogs are now ready. Those who have received them say they are the finest bee-supply catalogs ever put out. If you have not already received a copy, send for it.

THE A. I. ROOT COMPANY,

Syracuse, N. Y.

"Griggs Saves You Freight."

Little Wonder, 2-inch, each, .50; mail, .65.

Honey-knife, .70; mail, .80.

Manufactured only by

WITH OUR READERS AND ADVERTISERS

"Will you please suspend publication of our 'help wanted' ad. in GLEANINGS? We are simply swamped with replies, and every one, nearly, a desirable man. We wanted only one now; but we have so many replies it is a task even to acknowledge them." The above is a letter recently received from the Rocky Mountain Bee Company, who have used our columns on various occasions, and always, we believe, with satisfactory results.

To many it might seem that a two or three line ad. in the classified department of a paper like GLEANINGS would not be especially satisfactory in point of returns; but a trial of them will convince you that quite the opposite is the fact. Our readers can get a double value from the "classified advertising" department. In the first place, a careful perusal of these small advertisements in every issue will often result in the purchase of some honey, supplies, bees, or queens, or some poultry or eggs, at a very reasonable price. Through this department exchanges are made, positions secured and given, all with very little trouble or expense, and invariably to the satisfaction of the reader.

On the other hand, there is hardly a reader of our magazine who at some time or other hasn't occasion to sell something; and through what better medium can he make such sales than his own paper, where he may put his wares before those interested in the same general pursuits? The cost is small, and one or two insertions are generally sufficient to make sales. When you are cleaning up this spring, if you find a lot of things that are really good but that you have no use for, try offering them through the classified department of this paper at a reasonable price and turn them into money. It doesn't require any effort on your part. GLEANINGS does the work.

If you need help for your spring work, or if you haven't enough of your own work to do, you will find that GLEANINGS can help you out. A "help wanted" advertisement will bring responses from those who really want to work and are reliable; and if you are looking for a place either in an apiary or on a farm you will find our readers very responsive to this class of advertising.

It will pay our readers well to peruse the classified columns of every issue very carefully, and to make a liberal use of them whenever occasion requires!

"If goods are wanted quick, send to Pouder."

(Twenty-third year.)

Just a Minute!

While I am looking carefully after the Bee Supply Business in the three or four States which I claim as my own territory, I am aware that many readers of GLEANINGS, located a long distance from Indianapolis, have not considered the possibilities and advantages that are open to them in securing the Root Goods at factory prices from this shipping point. I have the facilities for handling more business, and a line from you with a list of your needs will bring an immediate estimate, and would not put you under any obligations. No order is too small for my best attention, and just this week I secured a 17-cent order on which I paid 25 cents dray charges and 7 cents for a shipping-box. I wanted that order, and my friend will want more goods later, and likely his neighbors will send their orders with his. Any complaints about my goods or methods are entirely out of the ordinary, while kind and appreciative letters are arriving constantly. I make mistakes, and I believe we all do at times, but they are always corrected with no expense to my patrons.

Walter S. Pouder.

Center, Ind.

Dear Sir:—I received my sections yesterday and they are all right. I appreciate the promptness and manner in which you corrected the mistake. My hives are first class, and you may count on me as a regular customer whenever I am in need of bee supplies. Again thanking you for your courtesy, I remain
Yours truly, CLARENCE McREYNOLDS.

BEESWAX. It pays to save it, and when you have it ready for shipment please remember me, and I will pay highest market price in cash or trade at any time.

My large illustrated catalog of Bee Supplies is free, and it contains valuable information for the beginner as well as for the expert.

WALTER S. POWDER, Indianapolis, Ind.

859 Massachusetts Ave.

When You Buy Lewis Beeware You Get —

Lewis Quality—which means that all Lewis Hives are made out of clear white pine, and Lewis sections made out of fine bright basswood. The material in these goods is the best obtainable, and selected by experts.

Lewis Workmanship—The Lewis factory is equipped with the latest improved machinery, constantly watched over by experts. The Lewis head mechanic has had thirty-five years of bee-supply experience, the superintendent of bee-hive department twenty-nine years; the superintendent of sections twenty-eight years. These and many other skilled men have a hand in all the Lewis goods you buy.

Lewis Packing—All Lewis Beeware is carefully and accurately packed. A patent woven wood and wire package, made only by the Lewis Company, is employed largely in packing. This makes the package light, compact, and damage-proof.

Lewis Service—Years ago all goods were shipped direct from the factory, with attending high freight rates and delays during the honey season. Now Lewis Beeware can be obtained almost at your own door. Over thirty distributing houses carrying Lewis Beeware by the carload are dotted all over the United States and foreign countries. Write for the name of the one nearest you.

G. B. Lewis Company, Manufacturers of Beeware, Watertown, Wisconsin

Better Fruit

SPRAY WITH PYROX

NO WORMS. Pyrox kills all leaf-eating insects, codling moth, canker worm and kindred pests.

NO SPOTS. Pyrox prevents or destroys fungous growths, scab, blight, rot, etc., thus producing beautiful,

PRIZE QUALITY fruit. Leading fruit growers and exhibitors like Hardy of N. H., Repp Bros., also Barclay, of N. J., Tyson of Penn., have used Pyrox for years. You know *their* record. Pyrox is **THE ONE BEST** spray; smooth, creamy, free from lumps, mixes easily in cold water, doesn't clog the nozzles. It sticks to foliage even through heavy rains, remaining effective for months, thus saving expense of respraying. All ready to use by adding water.

GOOD FOR ALL FRUITS AND VEGETABLES

SEND FOR FREE BOOK ON SPRAYING with prices, etc. Also see if your dealer has Pyrox on hand. Wise growers are ordering early.

PUBLICATIONS ON

BEE CULTURE

Please use coupon below, checking the numbers of items wanted.

The pamphlets and booklets listed below are of more than ordinary interest:

- 1 **My First Season's Experience with the Honey-bee.** By the "Spectator," of the *Outlook*, of New York. A ten-page leaflet detailing the experiences of this well-known writer. You will read the leaflet through before you lay it down. Free.
- 2 **The Bee-keeper and Fruit-grower.** A 15-page booklet giving actual facts regarding the value of bees to fruit, and showing how bee-keeping may be doubly profitable to the fruit-grower. Fruit-growers are realizing as never before the necessity of having honey-bees in close proximity to their blossoming fruit. Free.
- 3 **Bee-keeping for Sedentary Folk.** A 24-page leaflet reciting the actual experiences of an amateur bee-keeper, showing what equipment is best, points derived, etc. Free.
- 4 **Catalog of Bee-keepers' Supplies.** Our complete catalog will be mailed free to any address on request.
- 8 **Habits of the Honey-bee.** By Dr. E. F. Phillips. A somewhat scientific handling of the habits and anatomy of the bee. Price 10 cts.
- 9 **How to Keep Bees.** A book of 228 pages detailing in a most interesting manner the experience of a beginner in such a way as to help other beginners. Price \$1.00 postpaid.
- 10 **The A B C of Bee Culture.** A complete encyclopedia of bees, of 576 pages, fully illustrated, \$1.50 postpaid; half leather, \$2.
- 11 **Cleanings in Bee Culture.** A 64-page illustrated semi-monthly magazine, the leading exponent of bee culture in this country. Ten cents per issue, but to new subscribers we will furnish it six months for 25 cts.
- 12 **Back-yard Bee-keeping.** Six interesting lessons written in readable newspaper style. Many facts to encourage the "City Bound" man or woman with the back-to-the-land longing. Free.
- 15 **Truth About Sweet Clover.** Interesting booklet of nearly 100 pages. Tells of value of sweet clover for honey, for plowing under, as fertilizers of the soil, and food for horses, cattle, swine, sheep, etc. Free.

The coupon below may be used as an order sheet by properly checking the numbers of items wanted and adding your signature and remittance, if required.

Satisfactory Service and The Best Bee Supplies.

That is what we give our customers, and what we can give you if you will give us the chance. We keep a large and complete stock of Root's goods constantly on hand, and our largely increased facilities for handling goods make it possible to give every order the most prompt and careful attention. San Antonio is the shipping center of this section of the country. We can save time and freight, and get goods to you in better condition than to send to some more remote or less centrally located point. We base our claim for service, and the quality of our goods, not alone on what we think we can give you, but what our customers have had from us for years past. Just recently Mr. J. A. Simmons, of Sabinal, wrote us as follows:

As I have been using your supplies since March, 1903, I do not hesitate to commend you and the supplies you handle. Mistakes, a few have been made, but were cheerfully corrected. As I have nearly 500 colonies, I should know.

We have many more letters with equally good reports.

Catalog on request, also quotations made on large lists.

Weed Process Foundation.

We are running our new plant day and night and are able to supply the very best grade of foundation very promptly, and at prices which we are sure will please you. A customer writing a day or two ago about this says:

The foundation you worked for me has been received. Your work is perfect, and in those cartons it is so convenient for the retail trade.

We can use your wax at current prices if you have more than you want worked into foundation for this season's use.

Queens.

Untested, April 10 to May 10, \$1.00 each. Tested, March 1 to April 10, \$1.25 each. Selected tested, March 1 to April 10, \$2.00 each. Breeding queens, the very best, April 1 to December 1, \$5.00.

No-drip Shipping Cases.

A big stock of these on hand at low prices. Write for particulars. It will pay you to get our prices.

J. B. CASE, Port Orange, Fla.

Front Line Italian queens, well bred and hardy. After June 1, 6 for \$4.50. Satisfaction guaranteed.
J. B. HOLLOPETER, Pentz, Pa.

FOR \$250.—90 colonies of bees, portable house, tractor, supers, and hives for 120 colonies. Inspection invited.
JAMES ROAT, Canandaigua, N. Y.

Virginia queens, raised in full colonies, ready by May 1. All dead ones replaced free.
S. CLICK, Mt. Jackson, Va.

FOR SALE.—Three-banded Italian queens bred for honey, gentleness, and prolificness. One, \$1.00; 6 for \$5.00.
WM. S. BARNETT, Barnett's, Va.

WANTED.—50 colonies to a carload of populous bees. Make lowest price on the same.
QUIRIN-THE-QUEEN-BREEDER, Bellevue, O.

FOR SALE.—Full colonies of pure Italian bees in eight-frame dovetailed hives with Hoffman frames, at \$6.00 each.
F. A. GRAY, Redwood Falls, Minn.

FOR SALE.—Untested queens, Howe stock, selected to drones of a heavy honey-gathering strain. Ready in June. Untested, \$1.00; 6 for \$5.00. Circular on request.
D. G. LITTLE, Hartley, Ia.

QUEENS.—Mott's strain of Italians and Carniolans. Ten-page list free. Plans for introducing Queens, 15 cts.; How to increase, 15 cts.; both, 25 cents. Nuclei: bees per lb.
E. E. MOTT, Glenwood, Mich.

If any one has Italian bees for sale in eight-frame hives, with the frames running crosswise of the hive, please quote lowest price. I also want Italian bees on L. frames.

L. H. ROBEY, Worthington, W. Va.

Italian queens, untested, 75 cents; tested, \$1.25; breeders, \$5.00 each. Nuclei, with two frames, with untested queen, \$2.50.
E. M. COLLYER,
75 Broadway, Ossining, N. Y.

Golden Italian queens, 1911 rearing—tested, \$1.00; select, \$1.25; untested, about May, 70 cts. each; dozen, \$8.00. Send for circular and price list.

D. T. GASTER, Rt. 2, Randieman, N. C.

FOR SALE.—Golden untested queens at 75 c. each, or \$8.00 per dozen; tested, \$1.25 each, or 6 for \$6.00; select tested, \$2.00, or 6 for \$10.00. Safe arrival and perfect satisfaction guaranteed.
R. O. COX,
Box 8, Garland, Ala.

Colonies of Italian bees in L. hives, 10-fr., built on full brood-frames, wired, body and shallow super, redwood dovetailed, three coats white sheeted lids; each neat, modern, and full of stores—any time.
JOS. WALLRATH, Antioch, Cal.

Golden Italian queens that produce golden bees, the brightest kind. Gentle, and as good honey-gatherers as can be found. Each \$1.00; six, \$5.00; tested, \$2.00; breeders, \$5.00 to \$10.00.
J. B. BROCKWELL, Barnetts, Va.

Italian queens of Superior strain, from grafted cells built in strong colonies. No foul brood or other disease in this locality. Untested, \$1.00; 12, \$9.00.
SACRAMENTO VALLEY APIARY Co.,
College City, Cal.

Nucleus and full colonies. Bees by the pound. Apiaries inspected for brood diseases. Tested and better grades of bees. Rood's bee supplies. Write for circular and catalog.
FRANK M. KEITH,
83½ Florence St., Worcester, Mass.

A tested queen will save that queenless colony. Introduce her now. We can furnish them for \$1.00 each by return mail. Three-band Italians only. Send for price list.
J. W. K. SHAW & Co.,
Loreauville, La.

Golden and three-banded Italian queens. Tested, \$1.00 each; 3 for \$2.75; 6 or more, 85 cts. each. Untested, one, 75 cts; 3, \$2.00; 6 or more, 65 cts. each. There is no disease here. Bees, per lb., \$1.00; nuclei, per frame, \$1.25.
C. B. BANKSTON,
Buffalo, Leon Co., Texas.

FOR SALE.—Early "Italian" (Frofalcon) queens, March delivery, untested, \$1.50 each; April, \$1.25. Tested queens 50 cts. additional; selected tested, \$1.00 extra.
JOHN C. FROHLIGER,
257, 259 Market St., San Francisco, Cal.
Berkeley, Cal.

FOR SALE.—Moore's strain and golden Italian queens, untested, \$1.00; six, \$5.00; twelve, \$9.00. Carniolan, Banat, and Caucasian queens, select, \$1.25; six, \$6.00; twelve, \$10.00. Tested, any kind, \$1.50; six, \$8.00. Choice breeders, \$3.00. Circular free.
W. H. RAILS, Orange, Cal.

QUEENS AND NUCLEI.—My strain of three-banded Italian bees are developed honey-gatherers. My entire time has been given to them during the last 12 years. Warranted queens, 75 cts. each.; \$8.00 per dozen; tested queens, \$1.00 each, \$10.50 per dozen. Three-frame nuclei with tested queen, \$3.50 each. Satisfaction guaranteed.
W. D. ACHORD,
Fitzpatrick, Bullock Co., Ala.

Goldens that are golden. Queens that produce golden-to-tip workers, hardy, and honey-getters; a race of bees that has taken 15 years to produce, and will please all who try it; have had as high as 300 lbs. surplus to live in one season. Will replace all mismatched \$1.50 queens. Pure matings guaranteed. Queens, \$1.00 to \$2.00. Send for booklet.
GEO. M. STEELE, 30 South 40th St., Philadelphia, Pa.

FOR SALE.—North Carolina-bred queens. Fine Italian queens of either strain, golden or red clover. I breed my queens from the very best honey-gathering strains obtainable. My breeder-queens' bees have produced record crops of honey; also my drone mothers have done some. I take all pains possible to breed a good honey-gathering bee and a long-lived prolific queen. I will begin to mail untested queens about May 1. Book your orders now, and send in your remittance when you want your queens. Untested, \$7.00 per dozen. No foul brood.
H. B. MURRAY, Liberty, N. C.

Real Estate

FOR SALE.—A good four-room house and barn on four lots in the city of Stanfield, Ore.; also 150 colonies of bees in a good locality for comb honey.
Address T. J. BARRINGER, Stanfield, Ore.

Virginia apple orchards pay big profits. \$350 on long time and easy payments buys a ten-acre apple-orchard tract in the beautiful Shenandoah Valley of Virginia. Other lands, \$15 per acre and up. Write for beautiful booklet and excursion rates.

F. H. LA BAUME,

Ag'l Agent N. & W. R'y, Box 4015, Roanoke, Va.

Help Wanted

WANTED.—Assistant apiarist. Must be steady, honest, and willing to go to Colorado or Montana as needed.
THE ROCKY MOUNTAIN BEE CO.,
Berthoud, Colo.

WANTED.—An experienced beekeeper for the season of 1912 to manage an apiary of 300 colonies run for comb honey. Must understand the business thoroughly. State wages wanted, and experience you have had.
EPH. B. NELSON, Box 169, Vale, Ore.

WANTED.—A capable middle-aged woman who has had some experience in bee culture to take charge of apiary department on a large farm in Northern Michigan. Small guaranteed salary to start, with percentage of profits. Applicant must, in addition, be competent to keep the general farm books, which would require a little time each day. To an energetic intelligent person who could appreciate a good independent home with pleasant surroundings, this opportunity offers permanency, with a living in it now, and a very good cash return to grow into in the future.
J. C. HOWE,
Ridgewood Farm. Old Mission, Mich.

Miscellaneous

Thirty-cent potato and seed bargain. Don't miss offer of A. T. Cook, the temperance seedsman, p. 13.

FOR SALE.—Choice strawberry-plants, 50 cts. per 100; \$4.00 per 1000.
MRS. EVA FERRO,
East Stroudsburg, Pa.

Good used 60-lb. cans at 10 cts. each; will accept honey or bees in exchange.
C. W. FINCH,
1451 Ogden Ave., Chicago, Ill.

FOR SALE.—1½ h. p. Associated Mfg. Co.'s gasoline-engine in good condition; \$26.00 takes it.
M. C. SILSBEE, Rt. 3, Cohocton, N. Y.

Rubber stamps to order. Egg-daters, 60 cts. Leg-horns, W. Wyandotte breeder.
JEFF. MACOMBER, Gaylord, Mich.

Combine best features of all queen-rearing systems by using "Eureka Larva Transplanter," 50 c. See GLEANINGS, Dec. 1, 1910, page 765.
MARK W. MOE, 1716 Exposition Av., Denver, Col.

FOR SALE.—Holsman automobile — one of the reliable makes. Owner (a doctor) having bought a higher-powered car will sacrifice at \$135. Speak quick. The car is worth much more.
F. B. CAVANAGH, Hebron, Ind.

Indian Runner Ducks

Indian Runner duck eggs, 15 for \$1.00.

J. F. MICHAEL, Winchester, Ind.

I. R. duck eggs, fawn and white brownies, 20 for \$1.00. White-egg strain.
SARAH WIDRIG,
Rt. 29, Burt, N. Y.

Golden-laced Wyandottes and Indian Runner ducks. Blue-blooded egg-producers. Eggs, 15, \$1.50.
DR. D. OSCAR MEAD, Pinckneyville, Ill.

Fawn and white Indian Runner duck eggs, \$1.00 per 11; \$7.00 per 100. Day-old ducklings, 25 cts. each. Mating-list free. KENT JENNINGS, Mt. Gilead, O.

Am booking orders for White Indian Runner duck eggs — true I. R. type, and white; no sports; handsome and hardy. Also eggs from both light fawn and penciled strains. State which you want.
F. J. ARMSTRONG, Nevada, O.

Orders for eggs that will hatch, at 10 cts. each, for Indian Runner ducks, white and fawn; also for Buff Rock chickens; both standard stock, and from good laying strains. Write; want to tell you more about them, or place your order now.
J. RUDY ROEBUCK, Dalton, Ohio.

I have the typical Indian Runner ducks. They are the queens of all layers; and as for beauty, the artist's brush has never surpassed them. They stand preëminent to-day. My foundation stock is from the original winners at the Jamestown exposition. Pure-white eggs, 13 for \$1.00; 100, \$7.00. Satisfaction guaranteed or money refunded. This advertisement will be lived up to, to the letter.
ROBERT BIRD, Rt. 2, Pinckneyville, Ill.

Indian Runner ducks, true fawn and white. Eggs and stock for sale. Crystal White Orpingtons (Kellerstrass); beautiful white large birds; mature early. Stock and eggs for sale. S. C. R. I. Reds (Tompkins strain). S. C. Black Minorcas (Northrup strain). These are the largest Minorcas in the world. Write for prices on the above breeds and eggs.

C. O. YOST, Rt. 4, Winchester, Ind.

Poultry

Sicilian Buttercups. Eggs for hatching. Circular free.
D. S. DURALL, Hurdland, Mo.

Barred Rock eggs — Bred-to-lay strain; \$1.00 per 15. Catalog free.
J. W. DAIL, Cambridge, Md.

For utility and beauty, Buttercups unlike others. Eggs in season.

QUIRIN'S famous improved Italian queens, nuclei, colonies, and bees by the pound, ready in May. Our stock is northern-bred and hardy; five yards wintered on summer stands in 1908 and 1909 without a single loss. For prices, send for circular.

QUIRIN-THE-QUEEN-BREEDER, Bellevue, O.

Special Notices

By OUR BUSINESS MANAGER

We have on hand a limited number of fine untested Southern-bred queens which we can dispose of as select untested at \$1.25 each until the present stock is exhausted. This is your chance to get an exceptionally good queen to build up your colony for the best work this summer. Do not delay ordering, for the stock is limited.

Convention Notices.

The California State Beekeepers' Association will commence on the first of May to publish a monthly crop and market report. We should like to exchange this report for a local report of every beekeeping organization in the United States and Canada. We believe the benefit will be mutual. Please address our secretary, A. B. Shaffner, 3906 West First St., Los Angeles, Cal.

The spring meeting of the Colorado State Beekeepers' Association will take place in Montrose, Col., May 10th and 11th. The Montrose County Beekeepers' Association will be the host of the State Association at this meeting. It is desired that every beekeeper on the eastern side of the mountains take the trip to Montrose and see this part of the country. Homeseekers' rates will apply on the Denver & Rio Grande from Colorado Springs, Denver, and Pueblo. These rates are good for thirty days. I would suggest that the way to go is via Marshall Pass, and return by way of Grand Junction over Tennessee Pass. More of the country can be seen this way. The western-slope beekeepers in Montezuma, La Plata, Montrose, Delta, Mesa, and Garfield counties are urged to turn out in full force. This will be a live meeting, and you will regret it if you do not attend.

WESLEY FOSTER, Sec.

Books and Magazines.

PRINCIPLES AND PRACTICE OF POULTRY CULTURE.

The above is the title of a book by John H. Robinson, editor of *Farm-Poultry*, Boston, Mass. While designed for classes in agricultural colleges it aims to give the student a concise and complete statement of essentials, and to provide for the teacher a textbook which is easily adapted to long courses, short courses, and extension courses. While omitting nothing, it gives full scope to the teacher who desires to expand the treatment of any topic. Poultry culture is treated as a branch of agriculture and as a necessary permanent feature. Attention is directed to the general likeness of domesticated land birds, and the relations of this fact to good poultry practice are emphasized. In the discussion of such topics as feeding and breeding, the intimate association of the scientific and the practical in everyday work is made clear. The book is elaborately yet appropriately illustrated. More than 500 cuts from photographs and drawings, systematically arranged with reference to the text and to each other, show graphically the evolution of methods and systems of poultry-keeping, the development and range of types of structures for poultry, common appliances and the methods of using them, the characteristics of the different kinds, classes, breeds, and varieties of poultry, etc. The general list of references includes all important poultry books and bulletins. The glossary is carefully compiled, and includes all words used in the text in a technical sense. Though written primarily for students, the book meets all the requirements of a general treatise on poultry culture.

The book is published by Ginn & Co., Boston, Mass. Price \$2.50.

The 25-Year Car

By R. E. Olds, Designer

Reo the Fifth

Is the only car based on 25 years spent in car building.

In those 25 years I have created 24 models, and have watched their performance with tens of thousands of owners.

I have also kept in touch, since the start of this industry, with all that other men have done.

Here is the final result—my finest creation — the best that I can do.

How I Watch It

Never was a car so watched in the making as I am watching this. The pres-

tige of a lifetime is staked on it.

In this car we insist on utter exactness, regardless of time. Parts are ground over and over.

Steel for this car is all analyzed, so we know its exact composition. Each car gets a thousand inspections.

The margin of safety in every part is extreme. We old designers know the need for that.

I use roller bearings — Timken and Hyatt — instead of the usual ball bearings. In no part is cost considered.

The carburetor is doubly heated—with hot air and hot water — to deal with low-grade gasoline.

Unusual Beauty

The car is immensely impressive. It is long and roomy. The wheels are large, the car is over-tired. We avoid all the petty economies.

The body is finished in 17 coats. The lamps are enameled. Even the engine is nickel trimmed.

There is deep upholstery, made of genuine leather filled with hair.

At twice the price, no car could offer more comfort or more class.

Reo the Fifth
\$1,055

30-35
Horsepower
Wheel
Base—

Made with
2, 4 and 5
Passenger
Bodies

Top and windshield not included in price. We equip this car with mohair top, side curtains and slip cover, windshield, gas-tank, and speedometer—all for \$100 extra. SELF-STARTER, IF WANTED, \$20 EXTRA.

The Center Control

No Side Levers

The best new feature of the year is brought out in Reo the Fifth.

It is this center control, shaped like a cane handle. All the gear shifting is done by moving this lever less than three inches in each of four directions.

There are no side levers — neither inside nor outside the door. So the entrance in front on either side is clear.

Both brakes are operated by foot pedals, one of which also operates the clutch. Never was a car so simple in operation.

Left Side Drive

These features permit of the left side drive, as in electric cars. The driver sits, as he should sit, close to the cars he passes and on the up side of the road.

Yet this gear-shifting lever is at his right hand, and the brake pedals right before him.

This ideal arrangement is found today only in Reo the Fifth.

\$1,055 Too Low

The only point which does not meet my approval is this initial price. I believe it too low to continue.

It is based on the present low cost for materials, on enormous output, on ideal conditions.

This price I regard as a passing sensation. It is subject to instant advance. Under average conditions, it would be impossible.

But Reo the Fifth will always sell lower than any other car in its class. We have a model factory, modern equipment, enormous capacity. And we have the experience.

We are not over-capitalized — have no bonded debt. And we save about 20 per cent in the making by confining our output to only one chassis.

Thus the best car I can build is being sold at this moment for \$1,055.

1,000 Dealers

Reo the Fifth is shown by dealers in a thousand towns. We will tell you the nearest when you write for our book.

This book shows the various styles of bodies. It pictures every detail. It enables comparison with all other cars. It is the most popular book of the season.

Write for it now.

WHO'S YOUR CANDIDATE?

Is it Wilson?
 Is it Taft?
 Is it Harmon?
 Is it Roosevelt?
 Is it Cummins?
 Is it Bryan?
 Is it LaFollette?
 Is it Clark?

Knowing how much interest the whole people are taking in the presidential campaign, the most tangled and uncertain since 1892, a new series of

“Candidate Calendars”

has been prepared as shown at the top of this page. There are eight different Calendars, each with a splendid NEW portrait. There are more than eight candidates in the field, of course; but at this time these seem to have the best chance:

REPUBLICANS

The President
 Sen. Robert M. La Follette
 Col. Theodore Roosevelt
 Sen. Albert B. Cummins

DEMOCRATS

Gov. Woodrow Wilson
 Hon. William J. Bryan
 Gov. Judson Harmon
 Hon. Champ Clark

Calendars have not been made for a Socialist, Prohibition, or other party candidate, because it seems pretty certain that either a Democrat or Republican will be the next President.

Each calendar is 4¼ inches by 7½ inches. It is made of heavy green “Artillery” cardboard, the portrait printed with great care in two colors, and pasted on. The calendar pad has a sheet for each month, and its unique feature is that IT BEGINS WITH APRIL, 1912, and runs to MARCH, 1913. That is, it covers the whole campaign, from the present time till after the new President is inaugurated next year.

Be Sure and Get Your Favorite

Your choice of the Calendars, free, for a limited time, to every one sending for GLEANINGS and Farm Journal, new or renewal.

We do not care about selling the Calendars. But we will sell them if you find yourself unable to get them in any other way. 25 cents per copy, postpaid, any quantity, any selection.

Fire Away! Who's Your Choice?

GLEANINGS IN BEE CULTURE,
 Medina, Ohio.

Enclosed find \$1.00 for which send GLEANINGS for one year and FARM JOURNAL for five

years, and calendar of.....
 to this address:

Gleanings in Bee Culture Great Combination Offer

By special arrangement with the publishers, for a limited time we can offer the FARM JOURNAL FIVE years and GLEANINGS IN BEE CULTURE one year in advance, BOTH FOR \$1.00, and will include your choice of any of the above calendars.

ALL THREE for \$1.00

This price is good for a few weeks only, and may be increased at any time without notice.

Any subscriber who is in arrears for either paper can take advantage of this offer by paying up in full to date, and adding \$1.00 for the combination.

Cleanings in Bee Culture

MAY 6-1912
Agricultural
College

VOL. XL. • MAY 1, 1912, NO. 9.

GET THESE MONEY-MAKING SECRETS with FARM JOURNAL

Is this cock property held? "Poultry Secrets" tells how to carry fowls, and many other secrets far more important.

For \$1.00 you can get now not only the **FARM JOURNAL** for **FOUR** full years, but also your choice of any one of our famous booklets, "Money-making Secrets," that other people have bought by the **HUNDRED THOUSAND**.

Just note what the information given in one of them, "The Million Egg-Farm," did for Robert Liddle, a clerk of Scranton, Pa.

In May, 1910, Robert bought 2300 day-old chicks. He spent just one week studying the methods now given in this book. This was his only preparation for the business. Result this "greenhorn" raised 95 per cent of all his chicks—a most uncommon record! Of these, 1350 proved to be pullets. In less than seven months he was getting 425 eggs daily, and selling them at 58 cents a dozen. His feed cost averaged \$4.00 a day, leaving him **OVER \$17.00 A DAY PROFIT**—and this before *all* his pullets had begun laying.

Isn't "Money-making Secrets" a good name for such booklets?

Read what people say of the other booklets, and of the **FARM JOURNAL** itself:—

"I find your Egg-Book worth untold dollars," says **ROY CHANEY**, Illinois. "What it tells would take a beginner years to learn."

"I am much pleased with the Butter Book," writes **F. J. DICKSON**, Illinois, "and would like to know how I could secure 300 copies, one for each patron of our creamery."

"Duck Dollars is the best book I ever had on duck-raising," says **F. M. WARNOCK**, Pennsylvania.

"If your other booklets contain as much valuable information as the Egg-Book I would consider them cheap at double the price," says **F. W. MANSFIELD**, New York.

"I think your Egg-Book is a wonder," says **C. P. SHIREY**, Pennsylvania.

"The **FARM JOURNAL** beats them all," writes **T. H. POTTER**, Penn'a. "Every issue has reminders and ideas worth a year's subscription."

"One year I took another agricultural paper," says **N. M. GLADWIN**, Washington, "and it took a whole column to tell what **FARM JOURNAL** tells in one paragraph."

"If I could get as good interest on every dollar as I get from the **FARM JOURNAL**, I would soon be a millionaire," says **A. W. WEITZEL**, Pennsylvania.

"**FARM JOURNAL** is good for the man behind the counter, as well as the man in the field," says **J. I. SLOAT**, a Virginia bank clerk.

MONEY-MAKING SECRETS

These booklets are 6 by 9 inches, all profusely illustrated

POULTRY SECRETS is a great collection of discoveries and methods of successful poultrymen. It gives Feich's famous mating chart, the Curless method of securing 50 per cent more pullets than cockerels, Boyer's method of insuring fertility, with priceless secrets of mating, breeding, feed and feeding, how to produce winter eggs, and others long jealously guarded, now first published.

HORSE SECRETS exposes the methods of "bishops," "plugging," cocaine and gasoline doping, and other tricks of "kypes" and swindlers, and enables any one to **TELL AN UN-SOUND HORSE**. It also gives many valuable training, feeding, breeding, and veterinary secrets.

The **MILLION EGG-FARM** tells all of the methods by which **J. M. Foster** makes over \$18,000 A YEAR, mainly from eggs. Back-yard chicken-raisers, learn all about the "Rancocas Unit," and how **Foster FEEDS** his hens to make them produce such quantities of eggs, especially in winter.

CORN SECRETS, the great **NEW** hand-book of Prof. Holden, the "Corn King," tells how to get ten to **TWENTY BUSHELS MORE PER ACRE** of corn rich in protein and the best stock-feeding elements. Pictures make every process plain.

The "**BUTTER BOOK**" tells of seven cows that produced **HALF A TON OF BUTTER** each year (140 pounds is the average). An eye-opener for dairymen. Get it, weed out your poor cows, and turn good ones into record-breakers.

GARDEN GOLD shows how to make your back-yard supply fresh vegetables and fruit, how to cut down your grocery bills, keep a better table, and get cash for your surplus. It tells how to plant, cultivate, harvest, and market.

DUCK DOLLARS tells how the great **Weber** duck-farm near Boston makes every year 50 cents each on 40,000 ducklings. Tells why ducks pay them better than chickens, and just how they do everything.

TURKEY SECRETS, the latest authority on turkey-raising, discloses fully the methods of **Horace Vose**, the famous Rhode Island "turkey-man" who supplies the wonderful Thanksgiving turkeys for the White House. It tells how to mate, to set eggs to hatch, to feed and care for the young, to prevent sickness, to fatten, and how to make a turkey-ranch **PAY**.

Gleanings in Bee Culture Great Combination Offer

By special arrangement with the publishers, for a limited time we can offer the **FARM JOURNAL FIVE** years and **GLEANINGS IN BEE CULTURE** one year in advance, **BOTH FOR \$1.00**. Or **FARM JOURNAL FOUR** years and any one of the booklets, "Money-making Secrets," with **GLEANINGS for ALL THREE for \$1.00** one year . . .

This price is good for a few weeks only, and may be increased at any time without notice.

Any subscriber who is in arrears for either paper can take advantage of this offer by paying up in full to date, and adding \$1.00 for the combination.

GLEANINGS IN BEE CULTURE, Medina, Ohio.

Enclosed find \$1.00 for which send **GLEANINGS** for one year and **FARM JOURNAL** for five years, or for four years with this booklet.....

Where the good bee-hives come from

Falconer, N. Y.

Honey Markets

The prices listed below are intended to represent, as nearly as possible, the average market prices at which honey and beeswax are selling at the time of the report in the city mentioned. Unless otherwise stated, this is the price at which sales are being made by commission merchants or by producers direct to the retail merchant. When sales are made by commission merchants the usual commission (from five to ten per cent), cartage, and freight will be deducted; and in addition there is often a charge for storage by the commission merchant. When sales are made by the producer direct to the retailer, commission and storage, and other charges, are eliminated. Sales made to wholesale houses are usually about ten per cent less than those to retail merchants.

EASTERN GRADING RULES FOR COMB HONEY.

FANCY.—All sections well filled, combs straight, firmly attached to all four sides, the combs unsoiled by travel-stain or otherwise, all the cells sealed except an occasional one, the outside surface of the wood well scraped of propolis.

A No. 1.—All sections well filled except the row of cells next to the wood; combs straight; one-eighth part of comb surface soiled, or the entire surface slightly soiled; the outside surface of the wood well scraped of propolis.

No. 1.—All sections well filled except the row of cells next to the wood; combs comparatively even; one-eighth part of comb surface soiled, or the entire surface slightly soiled.

No. 2.—Three-fourths of the total surface must be filled and sealed.

No. 3.—Must weigh at least half as much as a full-weight section.

In addition to this the honey is to be classified according to color, using the terms white, amber, and dark; that is, there will be "Fancy white," "No. 1 Dark," etc.

NEW COMB-HONEY GRADING-RULES ADOPTED BY THE COLORADO STATE BEE-KEEPERS' ASSOCIATION.

No. 1 WHITE.—Sections to be well filled and evenly capped except the outside row, next to the wood; honey white or slightly amber, comb and cappings white, and not projecting beyond the wood; wood to be well cleaned; cases of separated honey to average 21 pounds net per case of 24 sections, no section in this grade to weigh less than 1½ ounces.

Cases of half-separated honey to average not less than 22 pounds net per case of 24 sections.

Cases of unseparated honey to average not less than 23 pounds net per case of 24 sections.

No. 1 LIGHT AMBER.—Sections to be well filled and evenly capped, except the outside row, next to the wood; honey white or light amber; comb and cappings from white to off color, but not dark; comb not projecting beyond the wood; wood to be well cleaned.

Cases of separated honey to average 21 pounds net per case of 24 sections; no section in this grade to weigh less than 1½ ounces.

Cases of half-separated honey to average not less than 22 pounds net per case of 24 sections.

Cases of unseparated honey to average not less than 23 pounds net per case of 24 sections.

No. 2.—This includes all white honey, and amber honey not included in the above grades; sections to be fairly well filled and capped, no more than 25 un-

capped cells, exclusive of outside row, permitted in this grade, wood to be well cleaned, no section in this grade to weigh less than 12 ounces.

Cases of separated honey to average not less than 19 pounds net.

BOSTON.—We quote fancy white comb at 17 to 18; light amber, 15; amber, 14; fancy white extracted, 10 to 11; light amber, 9 to 10; amber, 9. Beeswax, 30. Boston, April 18. **BLAKE-LEE CO.**

DENVER.—We have no comb honey to quote. Our market is entirely cleaned up. Our jobbing quotations on white extracted are 9 cts.; light amber, 8; strained, 6½ to 7½. We pay 26 cts. in cash or 28 in trade for clean yellow beeswax delivered here.

THE COLORADO HONEY-PRODUCERS' ASSO'N,
Denver, April 19. **F. Rauchfuss, Manager.**

INDIANAPOLIS.—White comb sells at 18 cents in ten-case lots. Amber grades are in slow demand at lower figures. Best extracted sells at 11 to 12 in five-gallon cans. Jobbing houses are well stocked, but producers are not now offering any honey. Beeswax is in good demand, and producers are being paid 31 cts. per lb.

Indianapolis, April 17. **WALTER S. POWDER.**

ALBANY.—The honey market is nominal, there being no comb honey here now, and extracted is very slow at any price. We are selling considerable sugar to beekeepers now, which indicates that bees have not wintered well. The greatest call is for lump or cube sugar, this being more economical for feeding than a loose sugar, as the bees do not waste it in feeding.

Albany, April 20. **H. R. WRIGHT.**

ZANESVILLE.—There has been practically no alteration in market conditions since our last quotations, and prices are about as before—for best white comb, 20 cts. in one or two case lots; larger quantities proportionately less. Best white extracted in 60-lb. cans brings 11 to 12. Producers are receiving for beeswax 29 cts. in cash or 31 in exchange for bee supplies.

Zanesville, O., April 17. **E. W. PEIRCE.**

KANSAS CITY.—Our market is almost cleaned up on both comb and extracted honey. There has been no change in prices since our last. We quote No. 1 white comb honey in 24-section cases, \$3.25; No. 2 ditto, \$3.00; No. 1 amber ditto, \$3.00; No. 2 ditto, \$2.75; extracted white, per lb., 9; amber, 7½ to 8. Beeswax, 25 to 28.

C. C. CLEMONS PRODUCE CO.
Kansas City, April 22.

CINCINNATI.—The market on comb honey is about cleaned up, and there is a very light demand. The demand, it seems, has fallen off considerably. Extracted white, in 60-lb. cans, brings 10 cts.; light amber, as above, 8½. There is also a very light demand for extracted. Beeswax is in fair demand at \$33.00 per 100 lbs. The above are our selling prices, not what we are paying.

Cincinnati, April 17. **C. H. W. WEBER & CO.**

THE FRED W. MUTH CO.

"THE BUSY BEE MEN"

51 WALNUT STREET

CINCINNATI, OHIO

The season has opened up more favorably, after all, than many beekeepers anticipated, and many find themselves unprepared for the swarming period and honey-flow which is just before them. Extra hives just now may mean almost a double output of honey, and we can get these hives to you at once. We have a large and complete stock of all kinds and combinations, and can fill your order the day it is received.

If you are producing comb honey the Danzenbaker hive will give you most excellent satisfaction. Reports from large users of this hive show that with it a very large percentage of fancy comb honey may be produced; and with a little extra protection it is an excellent wintering hive.

Another comb-honey hive that is very popular this season is the Buckeye double-walled hive. This is the new movable-bottom pattern, and the double-wall feature offers protection, not only in the winter, but at all seasons. This is particularly valuable in the early part of the season when sudden changes of temperature are apt to have disastrous results.

For the production of extracted honey there is no better hive than the regular ten-frame dovetailed pattern. This has been a standard for years, and will admit of a number of changes and combinations to suit local conditions and the season.

We have also, of course, our usual stock of all other supplies, and can handle your order for any item listed in our catalog with our usual promptness and dispatch. We are better equipped than any other dealer in this section to give special attention to hurry orders, and solicit a trial of our goods and our service.

The Purity of the SWEET-CLOVER SEED

Sold by The A. I. Root Co. is Attested to by the
U. S. Government

READ THIS LETTER:

Brooksville, Ky., March 13, 1911.
The A. I. Root Co., Medina, Ohio.

Gentlemen:—Some time ago I sent to you for a sample of your white and yellow sweet-clover seed. After receiving the samples I sent them to Washington, D. C. The yellow hulled tested 99.71 per cent of pure seed; the unhulled white tested 99.11 per cent of pure seed. I think that is fine. I inclose you the sample that you sent me, and want you to send me 30 lbs. of the same lot that this sample is out of, or some equally good. Send the seed by freight.

Yours truly, H. A. JETT.

We have a booklet, published for free distribution, which tells THE TRUTH ABOUT SWEET CLOVER. Ask for your copy.

We can now supply fresh new seed of 1911 crop in all but the annual yellow at following

PRICES

In lots of—	1 lb.	10 lb.	25 lb.	100 lb.
Hulled Yellow Annual (<i>Melilotus Indica</i>), lb.	15c	12c	11c	10c
Unhulled Yellow Biennial (<i>Melilotus officinalis</i>).	25c	22c	21c	20c
Hulled White, Imported seed	27c	24c	23c	22c
Hulled White, Domestic seed	23c	20c	19c	18c
Unhulled White (<i>Melilotus alba</i>) per lb.	16c	14c	13c	12c

The prices are all subject to market changes.

As to the comparative value of the different varieties, we will say that the white, or *Melilotus alba*, is most common, and therefore the best known. The yellow is desirable because it begins blooming usually from two to four weeks earlier than the white. As to the two varieties of yellow, one of the experiment stations has said there was a distinction without a difference.

The A. I. Root Company, Medina, O.

Honey Markets, continued from page 2.

CHICAGO.—The trade in honey this month has been exceedingly light in both comb and extracted, with a steady market of 17 to 18 cts. for the fancy grades of comb, off colors bringing from 1 to 5 cts. per lb. less, even while in good condition and sections well filled. There is a good deal of this grade of comb honey on this market. It seems difficult for producers to realize that it could not have been sold during the winter, as the neighboring States had very little pure white honey from the yield of 1911. They assume that people would use the other in the absence of white; and inquiries are coming frequently, wanting to know why they have not had returns on their consignments; but it is simply impossible to force this grade and color of honey in a city market. Extracted white sells at from 8 to 9, and ambers at from 7 to 8. Beeswax is steady, and sells from 30 to 32.

Chicago, April 17. R. A. BURNETT & Co.

LIVERPOOL.—Since our last report, our market for honey and beeswax has been very quiet. The demand for honey has been limited, but stocks of Chilian are now quite exhausted. There have been retail sales of Californian at late rates, and for a recent arrival of West Indian \$6.96 to \$7.92 is quoted as to quality. Lately 500 barrels of Chilian average, pile 3, have been sold at \$5.88, c. i. f., April-May shipment, and a further 200-barrel offer at \$6.24. Stocks of other descriptions have sold at different quotations as follows: Haitien, \$5.76 to \$7.30; Peruvian, \$3.84 to \$4.80; Chilian, \$5.52 to \$8.16; Jamaican, \$6.24 to \$7.68; Californian, \$9.60 to \$10.92. Of beeswax, 20 bags sold at \$34.48 to \$39.02; \$37.48 to \$41.12 is now quoted. Stocks are very small. Sales of P. A. Q. Chilian for shipment are reported at \$36.28, c. i. f., net cash. Quotations for other descriptions are as follows: African, \$32.16 to \$34.48; Jamaican, \$37.72; West Indian, \$32.64 to \$36.28.

Liverpool, April 15.

CONTAINERS

. . . FOR . . .

Comb and Extracted Honey

We offer this year a very complete line of cartons for comb honey—any size or color, with any desired printing. Bottles, jars, and cans for extracted honey with capacity ranging from that of a tumbler to a barrel. . . Special attention is directed to our assortment of Friction-top Pails and to tin cans of $\frac{1}{2}$, 1, 5 gallon capacity.

Get full information,
prices, and samples.

The A. I. Root Company
Medina, Ohio

ST. LOUIS.—Since our previous report, April 5, the honey market has remained practically unchanged. The stock of comb honey is very small, and there is hardly any demand for it. The quotations are more or less nominal. The stock of extracted honey is also small, with a limited demand. We quote fancy white comb honey at 16 to 17; No. 1 white, 15 to 16; light amber, 13 to 14; dark, 8 to 11. Broken and leaking honey sells at much less. Extracted light-amber California brings 8½ to 9; light amber, Southern, 8 to 8½ in five-gallon cans; Southern in barrels and half-barrels, light amber, 7 to 7½. Dark sells at less. Beeswax, prime, brings 30 cts.; impure and inferior, less.

R. HARTMANN PRODUCE COMPANY.

For BEGINNERS and OLD-TIMERS

BEE BOOK

A full description of our 1912 line of Bee Supplies, together with prices. The book contains many helpful hints on raising bees. It will interest both beginners and experienced beekeepers. In the back is a list of questions and answers touching the important points of bee culture. It contains 64 pages of useful matter pertaining to apiculture. Get one FREE.

How to Make Money in Bees

This splendid booklet contains hints for beginners that make the way easy to get started in bee culture. It tells how to select the bees and equipment, and guides him in such matters as swarming, hiving, feeding, wintering, guarding against diseases, etc. No beginner should start without one. It will cost nothing but a stamp to get it. The book is FREE.

Why Not REAR Your Own QUEENS?

Doolittle's "Scientific Queen-Rearing" and the
American Bee Journal for 1912—Both for Only **\$1.00**

Every Bee-keeper Should Have Both Book and Bee-Paper.

D^{OOLITTLE'S} "Scientific Queen-Rearing" book contains 126 pages, and is bound in leatherette with round corners. It tells in the clearest way possible just how the famous queen-breeder, Mr. G. M. Doolittle, rears the best of queen-bees in perfect accord with Nature's way. It is for both amateur and veteran in bee-keeping. As all know, Mr. Doolittle has spent some 40 years in rearing queens and producing honey. He has no superior as a queen-breeder. You can learn to rear fine queens by following his directions. Read up now before the bee season is here.

You will not regret having this book, which also gives his management of the bees for the production of honey.

The book, and the American Bee Journal for 1912, for only \$1.00, is certainly a big bargain for you. Send the \$1.00 now, and we will begin your subscription with January 1, 1912, and mail you the book. Sample copy of the Bee Journal free. Address

GEORGE W. YORK & CO.,

117 No. Jefferson St., Chicago, Ill.

The Welcome Honey-flow...

to which you have been looking forward through the long dreary months of winter, is at last at hand. Are you ready to take full advantage of it? Unless, with wise forethought, you have already purchased the hives, sections, foundation, or other supplies, you will probably require, it is high time that your wants crystallize into an order. Forecasts are at best uncertain, but present indications are for a good honey-flow, and its value to you will depend upon the degree of preparation you have made for it. There is yet just time to secure the necessary supplies and properly arrange your equipment. Longer delay may mean regrettable loss.

The following letter will give you a tip as to where you can secure best goods, best treatment, and most prompt delivery.

Mr. E. W. Peirce,
Zanesville, Ohio.

The bee-supplies were received March 4th. The February cash discount was received also. Many thanks for promptness and kind treatment. Yours truly,

FRED BAILEY.

Thornton, W. Va.

Mr. Bailey is but one of hundreds of beekeepers who find in ROOT QUALITY—PEIRCE SERVICE absolute satisfaction. If you are not already of this number, you will be eventually.

A postal card addressed as below will bring you a large illustrated catalog.

WANTED EVERY BEEKEEPER TO INVESTIGATE..... THE BOYUM FOUNDATION-FASTENER

Pat'd Aug. 1, 1911

Merits and Claims: Takes four sections at one time, while in section-holder or not; can put in corner starters; can put in top and bottom or corner starters at one operation. Fastens the starters by "soldering" them to the wood. No handling of sections separately. Simple, easy, and handy to operate. Does better and faster work. Never too warm for the starters. No fastening to table, wall, or floor; no treadle, no levers; no smoky blades; no dripping of wax on lamp, table, floor, or clothing. Saves time and work. Insures better-built combs. It is strictly up to date. Price complete with lamp (25c burner), \$1.30; without lamp, 85c. Sizes other than 4x5 and 4 1/4 square, 20c extra. State for what style of sections wanted. Remit by money order. Manufactured by

The Boyum Apiaries Company, Rushford, Minn., U. S. A.

A. G. WOODMAN CO., Grand Rapids, Mich.

"If goods are wanted quick, send to Pouder."

(Twenty-third year.)

A Pleased Patron

Is the result when he gets his supplies here; and while winter losses have been severe the outlook seems to be brightening up quite a little since the advent of favorable weather conditions. I presume we all get discouraged at times, and that there is no occupation entirely free from its drawbacks. I myself have experienced it again and again; but the darkest hour is just before day and at such times I just roll up my sleeves and work a little harder and say to myself, "They have gotty quit a kickin' my dawg aroun'."

Much new material has recently been added to my stock of goods, including a stock of foundation fresh from the mills. My orders for bee-supplies are being filled with the usual promptness; and if I have any dissatisfied customers they are saying nothing about it. If interested in anything pertaining to the bee industry I wish you would write me about it, and to reply will be one of my pleasures. Everything pertaining to the bee yard is here, and I am at your service. My catalog is free, and contains valuable information; but after you receive it you may wish to make some further inquiries and to take care of these inquiries is my mission.

BEESWAX.—When you have it ready please remember me and I will pay highest market price, cash or trade, and you will find me prompt.

Send your name on a postal card for new catalog.

WALTER S. POUDER, Indianapolis, Ind.

859 Massachusetts Ave.

COME SOUTH
—TO—
America's Market Gardens

Be healthy, happy and independent, under clear skies in a progressive country, raising **GRAPE FRUIT, ORANGES, ETC.** Fruits and vegetables are grown to perfection in the Six Southern States (Virginia, North Carolina, South Carolina, Georgia, Florida and Alabama), traversed by the Seaboard Air Line Railway,

**FROM THE PEANUT FIELDS OF VIRGINIA
TO THE ORANGE GROVES OF FLORIDA**

Fertile land is now cheap—\$10.00 per acre and up, but will soon advance. Every inducement is offered to the man of limited means. Farms can be bought on easy terms. Low freight rates—quick transportation to the big markets. Good roads, schools and churches. Plenty of water—ideal climate the year 'round, no extreme heat or cold—high class labor. We want more good people, we have a big country full of natural advantages, close to large towns—not in a wilderness. An investment in Real Estate here is absolutely safe. Ten acres will make you independent. Hundreds of satisfied settlers are becoming wealthy, and enjoying life. You can do the same.

In the land of Manatee on the West Coast of FLORIDA you can raise two to three crops a year—net \$500 to \$1000 an acre.

Build a Home for your Family NOW. Give them the many advantages which were denied you. For handsome booklet and literature, write at once to:

**J. A. PRIDE, Gen. Ind. Agt.,
Seaboard Air Line Railway,
Suite 611, NORFOLK, VA.**

THE BEST LIGHT

makes and burns its own gas. Costs 2c. a week to operate. No dirt, grease nor odor. A pure white light, more brilliant than electricity or acetylene. None other so cheap or effective. Agents wanted. Write for catalogue and prices.

PUBLICATIONS ON BEE CULTURE

Please use coupon below, checking the numbers of items wanted.

The pamphlets and booklets listed below are of more than ordinary interest:

- 1 **My First Season's Experience with the Honey-bee.** By the "Spectator," of the *Outlook*, of New York. A ten-page leaflet detailing the experiences of this well-known writer. You will read the leaflet through before you lay it down. Free.
- 2 **The Bee-keeper and Fruit-grower.** A 15-page booklet giving actual facts regarding the value of bees to fruit, and showing how bee-keeping may be doubly profitable to the fruit-grower. Fruit-growers are realizing as never before the necessity of having honey-bees in close proximity to their blossoming fruit. Free.
- 3 **Bee-keeping for Sedentary Folk.** A 24-page leaflet reciting the actual experiences of an amateur bee-keeper, showing what equipment is best, points derived, etc. Free.
- 4 **Catalog of Bee-keepers' Supplies.** Our complete catalog will be mailed free to any address on request.
- 8 **Habits of the Honey-bee.** By Dr. E. F. Phillips. A somewhat scientific handling of the habits and anatomy of the bee. Price 10 cts.
- 9 **How to Keep Bees.** A book of 228 pages detailing in a most interesting manner the experience of a beginner in such a way as to help other beginners. Price \$1.00 postpaid.
- 10 **The A B C of Bee Culture.** A complete encyclopedia of bees, of 576 pages, fully illustrated, \$1.50 postpaid; half leather, \$2.
- 11 **Gleanings in Bee Culture.** A 64-page illustrated semi-monthly magazine, the leading exponent of bee culture in this country. Ten cents per issue, but to new subscribers we will furnish it six months for 25 cts.
- 12 **Back-yard Bee-keeping.** Six interesting lessons written in readable newspaper style. Many facts to encourage the "City Bound" man or woman with the back-to-the-land longing. Free.
- 15 **Truth About Sweet Clover.** Interesting booklet of nearly 100 pages. Tells of value of sweet clover for honey, for plowing under, as fertilizers of the soil, and food for horses, cattle, swine, sheep, etc. Free.

The coupon below may be used as an order sheet by properly checking the numbers of items wanted and adding your signature, and remittance, if required.

Science of Fishing

The Most Practical Book on Fishing Ever Published

A new book on fishing, telling how to catch fish; for those who have caught them, as well as those who never have.

The book contains upward of 300 pages of practical information on fishing for fresh-water food and game fish; also those of salt water. There are no superfluities, but each chapter has been condensed and put into simple language that is easily understood by all, and there is more information in this book than in any other on fishing of its size ever published. It describes the fish; tells where they are found; tells their habits, and how, when, and where to catch them; also the kind of tackle that is used

for each fish. The book is profusely illustrated with half-tone cuts from photographs and drawings showing all kinds of rods, reels, and other tackle; the various fish; diagrams showing how to make rods, nets, etc., and how to handle the tackle in various kinds of fishing. There are over a hundred illustrations in all. The book is 5x7 inches, printed on good quality heavy paper, and divided up into 22 chapters as follows:

- I.—Remarks on the Gentle Art.
- II.—Rods.
- III.—Reels.
- IV.—Hooks, Lines, and Leaders.
- V.—Flies.
- VI.—Artificial Baits.
- VII.—Landing Nets, Gaffs, Tackle, Boxes, etc.
- VIII.—Bait Casting.
- IX.—Fly Casting.
- X.—Surf Casting, Trolling, Stiff Fishing, etc.
- XI.—Use of Natural Baits.
- XII.—Handling the Hooked Fish.
- XIII.—Fishing for Black Bass.
- XIV.—Fishing for Trout and Salmon.
- XV.—Pike, Pickerel, Musklunge, and Pike-Perch.
- XVI.—Sunfish, Carp, Catfish, and Suckers.
- XVII.—Fishing for Tarpon and Tuna.
- XVIII.—Fishing for Other Sea Fish.
- XIX.—Making, Repairing, and Caring for Tackle.
- XX.—General Information and Advice.
- XXI.—Commercial Fishing.
- XXII.—Distribution of Fish—Good Places.

10 | -Advanced Bee Culture.....1 00

| Fifty Years Among the Bees. New edition. 1 00
By Dr. C. C. Miller. Dr. Miller is too well known among the bee-keeping fraternity to need any introduction. His book is charmingly written, and covers his experience in detail.

15 | Cook's Manual, cloth.....1 00

5 | Doolittle on Queen-rearing..... 95

15 | Langstroth on the Honey Bee. Revised edition..... 1 10

10 | Quimby's New Bee-keeping..... 90

5 | British Bee-keeper's Guide-book, by Thomas William Cowan, England..... 95

5 | The Honey-bee, by Thos. William Cowan..... 95

10 | How to Keep Bees..... 90

15 | Modern Bee-farm. By S. Simmins. New edition; cloth bound.....1 85

| Wax Craft, Cowan.....1 00

POPULAR BOOKS ON BEE CULTURE.

11 | The Bee People, Margaret W. Morley.....1 40

11 | The Honey-makers, Margaret W. Morley.....1 40

11 | Life of the Bee, Maeterlinck.....1 30

11 | The Swarm, Maeterlinck.....1 20

7 | The Bee-master of Warrilow, Edwards..... 50

10 | Lore of the Honey-bee..... 1 90

| Alexander's Writings on Practical Bee Culture.

By the late E. W. Alexander, who conducted the largest apiary in the United States. A wonderfully interesting discussion of bee-keeping in its broadest phases. Any one can understand it; 35 chapters, 95 pages. Paper bound, 50 cts. postpaid.

| A Year's Work in an Out-apiary.....

By G. M. Doolittle. Packed full of most valuable information ever given to bee-keepers. A practical and interesting book by a very successful apiarist. Sale has reached nearly 5000 copies; 60 pages, paper bound; 50 cts. postpaid.

| The Townsend Bee Book.....

By E. D. Townsend. Written by one of the most progressive, successful, and extensive bee-keepers in the U. S., this book has been in great demand from the day of its announcement. Tells how to make a start with bees, and will greatly benefit beginners and experienced bee-keepers; 90 pages, paper bound. 50 cts. postpaid.

| Bee-keeping by Twentieth-century Methods, by J. E. Hand..... 50

The author shows not only how to control swarming, but how to treat foul brood without shaking, and discusses in a comprehensive way many other down-to-date apicultural problems and their solutions.

In combination with Cleanings in Bee Culture for one year any one of these books may be had for the price of Cleanings alone, \$1. Foreign postage 60 cts. extra. Canadian postage 30 cts. extra.

MISCELLANEOUS HAND-BOOKS.

5 | A B C of Carp Culture, by Geo. Finley..... 25

7 | A B C of Potato Culture, Terry** New edition, revised & enlarged; paper, 50c; cloth, 75c, mail 85c.

This is T. B. Terry's first and most masterly work. It has really made a revolution in potato-growing, and has been reprinted in several foreign languages. By getting the ground in proper condition to grow great crops of clover, and turning this under, Terry succeeded, not only in getting more potatoes, but even better ones, and in producing them at less expense also, than by any plan or system be-

Postage.] [Price without postage.

fore the time he began his experiments in 1885. The book has already passed through three editions of many thousands. It not only includes potato-growing in the United States, but in Bermuda, the Island of Jersey, and other warmer parts of the world where "new potatoes" are raised for the express purpose of getting the high prices in the cities during January, February, and March. The book also gives special attention to the different and best methods for preserving and keeping seed potatoes in the very best condition to plant in all these different localities.

5 | A B C of Strawberry Culture,** by T. B. Terry.. New edition, revised and enlarged; paper, 45c; cloth, 68c; by mail, 75c.

After Terry's potato-book had obtained such a kind reception from farmers, market-gardeners, and others, he was induced to give his plan of growing strawberries, as he did potatoes, by plowing under great crops of clover, and, like the potato-book, his writings gave a new impetus to strawberry-growing; in fact, some of his pupils declare that, aside from the picking, they can grow strawberries almost as cheaply per bushel as potatoes. By following Terry's teachings, thousands of people have not only been able to give their families but the whole wide world better strawberries, and more of them, than they ever saw before.

6 | Asparagus Culture..... 40

6 | Alfalfa Culture..... 40

8 | Barn Plans and Out-buildings*..... 90

2 | Celery for Profit, by T. Greiner**..... 25

The first really full and complete book on celery culture, at a moderate price, that we have had. It is full of pictures, and the whole thing is made so plain that a schoolboy ought to be able to grow paying crops at once without any assistance except from the book.

10 | Fruit Harvesting, Storing, Marketing, etc..... 75

It has been well said that it is an easier matter to grow stuff than to sell it at a proper price after it is grown; and many men fail, not because they are inexperienced in getting a crop, but because they do not know how to sell their crops to the best advantage. This is the first book of the kind we have had as an aid in selling. It not only tells all about picking, sorting, and packing, but gives all the best methods for storing for one or two days or a longer time. It also tells about evaporating and canning when there is a glut in the market. It discusses fruit packages and commission dealers, and even takes in cold storage. It is a new book of 250 pages, full of illustrations. Publisher's price, \$1.00.

| Farming with Green Manures, postpaid**..... 90

This book was written several years ago; but since competent labor has got to be so expensive, and hard to get, many farmers are beginning to find they can turn under various green crops cheaper than to buy stable manure, and haul and spread it—cheaper, in fact, than they can buy fertilizers. This book mentions almost all plants used for plowing under, and gives the value compared with stable manure. Some of the claims seem extravagant, but we are at present getting good crops, and keeping up the fertility, by a similar treatment, on our ten-acre farm.

7 | Farm, Gardening, and Seed-growing**..... 90

10 | Fuller's Grape Culturist**.....1 15

5 | Garden and Farm Topics, Henderson**..... 60

12 | Gardening for Pleasure, Henderson*.....1 10

While "Gardening for Profit" is written with a view of making gardening PAY, it touches a good deal on the pleasure part, and "Gardening for Pleasure" takes up this matter of beautifying your homes, and improving your grounds, without special point in view of making money out of it. I think most of you will need this if you get "Gardening for Profit." This work has 246 pages and 134 illustrations. (Retail price \$2.00.)

12 | Gardening for Profit**.....1 10

This is a late revision of Peter Henderson's celebrated work. Nothing that has ever before been put in print has done so much toward making market-gardening a science, and a fascinating industry. Peter Henderson stands at the head, without question, although we have many other books on these rural employments. If you can get but one book let it be the above. It has 376 pages and 138 cuts. (Retail price \$2.00.)

8 | Gardening for Young and Old, Harris**..... 90

This is Joseph Harris' best and happiest effort. Although it goes over the same ground occupied by Peter

Postage.] [Price without postage.

Henderson, it particularly emphasizes thorough cultivation of the soil in preparing your ground; and this matter of adapting it to young people as well as old is brought out in a most happy vein. If your children have any sort of fancy for gardening it will pay you to make them a present of this book. It has 187 pages and 46 engravings

3 | Grasses and Clovers, with Notes on Forage Plants..... 20

This is by Henry A. Dreer, author of the book "Vegetables Under Glass" that has had such a large sale of late. This little book tells how six tons of grass has been grown to the acre, and gives much other valuable matter.

10 | Greenhouse Construction, by Prof. Taft**... 15
This book is of recent publication, and is as full and complete in regard to the building of all glass structures as is the next book in regard to their management. Any one who builds even a small structure for plant-growing under glass will save the value of the book by reading it carefully.

12 | Greenhouse Management, by Prof. Taft**..... 15
This book is a companion to Greenhouse Construction. It is clear up to the times, contains 400 pages and a great lot of beautiful half-tone engravings. A large part of it is devoted to growing vegetables under glass, especially Grand Rapids lettuce, as well as fruits and flowers. The publisher's price is \$1.50; but as we bought quite a lot of them we can make a special price as above.

5 | Gregory on Cabbages, paper*..... 20
5 | Gregory on Squashes, paper*..... 20
5 | Gregory on Onions, paper*..... 20

The above three books, by our friend Gregory, are all valuable. The book on squashes especially is good reading for almost anybody, whether they raise squashes or not. It strikes at the very foundation of success in almost any kind of business.

| Handbook for Lumbermen..... 05

5 | Home, Pork-making; 125 pages, illustrated..... 40

I think it will pay well for everybody who keeps a pig to have this book. It tells all about the care of the pig, with lots of pictures describing cheap pens, appliances, all about butchering, the latest and most approved short cuts; all about making the pickle, barreling the meat, fixing a smoke-house (from the cheapest barrel up to the most approved arrangement); all about pig-troughs; how to keep them clean with little labor; recipes for cooking pork in every imaginable way, etc. Publisher's price is 50 cents, ours as above.

15 | How to Make the Garden Pay**..... 35

By T. Greiner. Those who are interested in hotbeds, cold-frames, cold green-houses, hothouses, or glass structures of any kind for the growth of plants, can not afford to be without the book. Publisher's price \$2.00.

10 | How to Keep Well and Live Long..... 90

The above book by T. B. Terry is, in my opinion, destined to relieve more pain, sickness, and death than any other book in the whole world that has ever come to my knowledge. This is pretty strong language, I admit; but since Mr. Terry commenced, years ago, to urge the importance of pure air, pure water, and a simple diet of good simple food in moderate quantities, the whole wide world, doctors included, seems to be gradually falling with him. Of course, other good and wise men have commenced a similar crusade for better health long before Terry did; but he seems to have a happy faculty of getting hold of people and keeping their attention. After you once start in with the book you will be pretty sure to read it to the end, and you will ever after be a better and a happier man or woman for having read it. We have a special low price for clubbing with GLEANINGS—that is, both for \$1.50. If you have already paid for GLEANINGS a year or more in advance you can have the book for 75 cents postpaid. Since it first came out, only a short time ago, we have sold nearly 1000 copies.

3 | Maple Sugar and the Sugar-bush**..... 25

5 | Manures; How to Make and How to Use

Them; in paper covers..... 30

6 | The same in cloth covers..... 65

Nut Culturist, postpaid..... 1 25

3 | Onions for Profit**..... 40

Fully up to the times, and includes both the old onion culture and the new method. The book is fully illustrated, and written with all the enthusiasm and

Even if one is not particularly interested in the busi-

Postage.] [Price without postage

ness, almost any person who picks up Greiner's books will like to read them through.

8 | Practical Floriculture, Henderson.*..... 1 10

10 | Small-Fruit Culturist, Fuller..... 75

2 | Experiments in Farming, By Waldo F. Brown..... 08

This little book ought to be worth its cost for what is said on each of the four different subjects; and the chapter on cement floors may be worth many dollars to anybody who has to use cement for floors, walks, or any thing else. In fact, if you follow the exceedingly plain directions you may save several dollars on one single job; and not only that, get a better cement floor than the average mason will make.

10 | Our Farming, by T. B. Terry**..... 75

Same, paper cover, postpaid..... 50

In which he tells "how we have made a run-down farm bring both profit and pleasure."

If ordered by express or freight with other goods, 10c less.

10 | Talks on Manures*..... 1 35

By Joseph Harris. Written conversational style, which makes it very interesting reading. It covers the subject very completely; contains numerous analyses of manures and comparative tables. The use of technical language is avoided, which makes the book of greatest value to the practical farmer. A book of 366 pages, nicely bound in cloth.

10 | The Dollar Hen..... 90

The above book will be clubbed with GLEANINGS for one year at \$1.50; or if you have already subscribed a year or more in advance you can have the book postpaid for 75 cents.

My opinion is, that "The Dollar Hen" is not only one of the best books on poultry that we have at the present time, but it is worth nearly as much as a dozen other books. Perhaps this is extreme, but we have very few books that are strictly up-to-date, and still fewer that pitch right into the superstitions and humbugs now scattered all through our poultry books and journals.

5 | The New Rhubarb Culture**..... 40

Whenever apples are worth a dollar a bushel or more, winter-grown rhubarb should pay big. It does not require an expensive house nor costly appliances. Any sort of cellar where it will not freeze is all right for it; and the small amount of heat necessary to force the rhubarb costs very little. The book is nicely bound in cloth, full of illustrations, mostly photos from real work, 130 pages. Every market-gardener should have this book, for the lessons taught indirectly, in regard to forcing other crops besides rhubarb. Publisher's price 50c.

5 | Tile Drainage, by W. I. Chamberlain..... 35

Fully illustrated, containing every thing of importance clear up to the present date.

The single chapter on digging ditches, with the illustrations given by Prof. Chamberlain, should alone make the book worth what it costs, to every one who has occasion to lay ten rods or more of tile. There is as much science in digging as in doing almost any thing else; and by following the plan directed in the book, one man will often do as much as two men without this knowledge.

5 | Tomato Culture..... 35

In three parts. Part first.—By J. W. Day, of Crystal Springs, Miss., treats of tomato culture in the South, with some remarks by A. I. Root, adapting it to the North. Part second.—By D. Cummins, of Conneaut, O., treats of tomato culture especially for canning-factories. Part third.—By A. I. Root, treats of plant-growing for market, and high-pressure gardening in general.

3 | Winter Care of Horses and Cattle..... 25

This is friend Terry's second book in regard to farm matters; but it is so intimately connected with his potato-book that it reads almost like a sequel to it. If you have only a horse or a cow, I think it will pay you to invest in a book. It has 44 pages and 4 cuts.

8 | What to Do, and How to be Happy while Do-

ing It..... 65

The above book, by A. I. Root, is a compilation of papers published in *Gleanings in Bee Culture*, in 1886, '7, and '8. It is intended to solve the problem of finding occupation for those scattered over our land out of employment. The suggestions are principally about finding employment about your own homes. The book is mainly upon market-gardening, fruit-culture, poultry-raising, etc. Illustrated, 188 pages, cloth.

8 | Same, paper covers..... 40

THE A. I. ROOT CO., Medina, Ohio.

Classified Advertisements

QUIRIN-THE-QUEEN-BREEDER, Bellevue, O.

Special Notices

By OUR BUSINESS MANAGER

Our Philadelphia manager, Mr. Wm. A. Selser, expects to continue lectures on beekeeping again this year on our roof at 10 Vine Street, Philadelphia, Pa., during May and June, every Tuesday and Friday, between 11 and 12 o'clock. Visitors desiring to see the actual work with the bees, and the various manipulations of the hives, will be welcome at these demonstrations. Of course, visitors are welcome at our store during all business hours, but for lectures and demonstration work are invited particularly at the hours named.

Special Notices

By A. I. ROOT

"THE CROWN OF DIAMONDS AND THE CROWN OF THORNS."

On my return from Florida I find that our people have printed and sent out 35,000 leaflets with the above heading. Letters come to us telling that towns and counties have probably been made dry instead of wet by the distribution of these leaflets. Remember, 10, 25, or 100 copies will be mailed free of charge if you will promise to distribute them judiciously. The postage on 100 copies is about 10 cents. If you wish to help pay for the printing and paper you may, if you choose, send the postage, as above.

"SUCCESS AND BLISTERS ARE TWIN SISTERS."

The above is clipped from that excellent *Petaluma Poultry Journal*, the only weekly periodical devoted to poultry, so far as I can learn. It is given as follows in a list of "don'ts."

"Don't mind a blister. Success and blisters are twin sisters."

By the way, let me say right here that not only my bodily health but my peace of mind depends on my working in the garden with the hoe, spade, or with the ducks and chickens, *every day of my life*. "By the sweat of thy face shalt thou eat bread."

THE CYPHERS INCUBATOR CATALOG FOR 1912.

This time it is a big book of nearly 250 pages; and, as I have said before, it contains as much of value as many fifty-cent poultry books—yes, more than some costing a dollar. Now, this catalog has a peculiar value. There seems to be a general impression that there are very few large poultry establishments that are a success. The truth is, there are hundreds of them, and they are scattered all over

our land, from Maine to Florida, and all the way to California. This catalog contains beautiful photos of these different poultry establishments, and letters from the proprietors, telling what they have made and how they did it, etc. Why, some of them are using a *hundred* or more of Cyphers' large-sized incubators. The catalog also tells about running incubators by means of gas and electricity. It also gives the prices of every thing in the way of up-to-date poultry appliances. Just send a postal card for it, to the Cyphers Incubator Co., either Buffalo or New York City.

DICKINSON'S SCHOOL OF MEMORY.

Some time ago I wrote for particulars of the above, and received a lot of literature, testimonials, etc.; but as they wanted, I think, \$25.00 for the "course" I dropped it. After a little time came an offer of the "whole outfit" for only fifteen dollars. As I didn't "bite," later only \$10.00; still later, \$5.00; and to-day, for some very plausible reasons, comes an offer for only \$3.00. What do you think of that way of doing business? I have before made mention of this (page 704, Nov. 15), as one of their "victims" submitted to me the whole thing, for which he paid \$10.00. Just now I notice they include lessons in "Personal Magnetism," how to overcome "bashfulness," etc. Thank you my good friends. There is too much of that kind of "schooling" already; and yet respectable periodicals accept advertisements from the "Memory Correspondence School."

Kind Words from Our Customers.

Mr. A. I. Root:—I have been an interested reader of GLEANINGS for over a year, and especially of the department conducted by yourself. I am glad to see that you favor prohibition, and I hope to see you in the ranks of the Prohibition party soon. In fact, the circumstances are such that I think you will be compelled to take that stand, almost in spite of yourself. Conditions in this city show the need of a permanent organized party behind the law to make it effective.

I am glad that you speak against tobacco. I have never used it and never will.

Savannah, Ga., March 20.

C. E. A. HALE.

"THE CROWN OF DIAMONDS AND THE CROWN OF THORNS."

Mr. Root:—A few days ago a friend gave me a copy of the circular which you issued, "The Crown of Diamonds and the Crown of Thorns." It did me good to read it, particularly the remarks of the *Arizona Gazette*, as he calls a spade a spade and hits from the shoulder.

Our village suffers from the rum curse; and as it is the education of public opinion that must make the change instead of law, it occurs to me that some of these will do some good here.

I inclose a check for \$1.00, which, as per the note at the end of the circular, would be your charge for 1000 copies. Send them to me by express, and we will see if they can not do a little good.

I have already arranged with our newsdealer here so that, for a small charge, he will inclose one of them with all the papers he delivers on the evening delivery. This will use 900 copies, and I want a few to give to those who will use them.

I never expect to see the country free from rum. It is a part of the divine plan that man must have a chance to choose between good and evil; to earn his title to his eternal home of happiness or of punishment. Our life is a school, and we are all learning lessons every day. Death is graduation, and that examination will show how well we have learned the lesson and determine our position. One of the lessons is that we are our brother's keeper; and if we can educate his mind to realize the results of intemperance, we accomplish two things: We learn one of our lessons and gain the merit deserved, and we turn his steps toward the light, it may be save him; and, while he may not thank us here, it is quite plain that, in the after-life, when he sees things in a clear vision, he will thank us. Those thanks are worth earning.

Cuyahoga Falls, O., Dec. 1. ED. F. EDGECOMBE.

Our Foundation Factory

This has been running night and day this season to keep up with our orders. We are not a single order behind, and do not intend to be. You may judge, therefore, what prompt attention your orders will have at our hands. Not only this, but for quality of goods ours have no equal. We have scores of letters from satisfied users of our foundation, and not a single complaint. Let us put your name on our record.

Our stock of pails, cans, and cases is more complete than ever before. We have now adopted a six-pound pail of the size suggested by the Texas Beekeepers' Association. It is an inch taller than formerly, and will not cause dissatisfaction among dealers because of short weight. We have also made an improvement in the cases holding the twelve-pound friction-top pails, adding partitions so that they are stronger. You will not be disappointed in the quality of any of these goods.

We have our usual stock of Root's goods. All the principal items listed in the catalog on hand ready for quick shipment. Frames, hives, sections, smokers, etc., and honey-extractors of many sizes and styles. If you haven't investigated the advantages of the power extractors, we suggest that you do so this season. Instead of being an expensive equipment you will find it a money and honey saving investment. Full particulars on request.

We can also fill your orders for queens promptly, and we are sure our stock will please you. Special prices on quantity lots for requeening large yards.

Topperwein & Mayfield,

Corner Nolan and Cherry Sts.

San Antonio, Texas.

Printype — OLIVER Typewriter

The Only Writing Machine in the World
that Successfully TYPEWRITES PRINT

--17 Cents a Day!

The Printype Oliver Typewriter, which has crowded ten years of typewriter progress into the space of *months*, is now offered to the public for *17 Cents a Day!*

—Offered at the same price as an *ordinary* typewriter—*payable in pennies!*

The commanding importance of *Printype* is everywhere conceded.

For who does not see what it means to make the world's vast volume of typewritten matter *as readable as books or magazines!* The Printype Oliver Typewriter is equipped with beautiful Book Type, such as is used on the world's *printing presses.*

Printype is distinguished by marvelous clearness and beauty. It does away with all strain on eyesight which the old-style *outline* type imposes. Printype puts life and style and *character* into typewritten correspondence. It makes every letter, every numeral, every character, "*as plain as print.*"

The complete story of *Printype* has never before been told. Here it is:

The Real Story of Printype

The idea from which "Printype" sprung resulted from the success of our type experts in equipping a typewriter used in our offices to write "The Oliver Typewriter" in our famous trade-mark

type just as the name appears on the outside of the machines and in all Oliver publicity.

The beautiful appearance and the marvelous clearness of the reproduction of our "ebony" trade-mark type, disclosed the possibilities of equipping The Oliver Typewriter to *write the entire English language in shaded letters!*

We worked for *years* on the plan and finally succeeded in producing, for exclusive use on The Oliver Typewriter, the wonderful shaded letters and numerals known to the world as "Printype."

The Public's Verdict

That the public is overwhelmingly in favor of Printype is impressively shown by this fact:

Already over 75 per cent of our entire output of Oliver Typewriters are "Printypes."

The public is *demanding* Printype in preference to the old-style type.

Within a year, at the present rate, *90 per cent of our total sales will be "Printypes."*

Thus the Oliver Typewriter, which first successfully introduced *visible writing*, is again to the fore with another revolutionary improvement — *Printype, the type that prints print!*

To Corporations: The Oliver Typewriter is used extensively by great concerns in all sections of the world. Our "17-Cents-a-Day" Plan is designed to help that large class of typewriter buyers who want the same typewriter that serves the great corporations, but prefer the easy system of purchase.

The masses want The Oliver Typewriter because it stands the test of the largest corporations.

Meet "Printype"—You'll Like Its Looks

Ask for Specimen Letter and "17-Cents-a-Day" Plan. Make the acquaintance of Printype, the reigning favorite of typewriterdom. Ask for a letter written on The Printype Oliver Typewriter, which will introduce you to this beautiful new type. We will also be pleased to forward the "17-Cents-a-Day" Plan on request. Address Sales Department.

The OLIVER Typewriter Company
116 Prospect St., Cleveland, O.

ROOT'S BEEKEEPERS SUPPLIES

You may have a catalog of supplies; but if you haven't ours for 1912 you have missed something really worth while, and should get one at once. It is the largest and most complete ever published—more than a mere price list of supplies—a book that every beekeeper can read with pleasure and profit. Beginners will find answers to many perplexing questions, and advanced beekeepers timely suggestions that will save them money. Old customers are writing us frequently letters like the following:

Your catalog for 1912, designated ROOT'S BEEKEEPERS' SUPPLIES, is received, and I certainly thank you for this book. I have had your catalog on my desk for years, and have used Root's supplies all along. I note the enlargement and improvement in your new catalog, and notice many things I expect to add to my apiary.
Crystal City, Texas.
C. W. Cox.

Our catalog this season also gives a full and complete list of books and booklets which we can supply. Many of these booklets are free, which doesn't mean that they are not worth reading, but simply that we want you to be informed on the subjects of which they treat. Send for a catalog, and check those in which you are interested.

Quick Deliveries

Next to having the best goods made, there is nothing so important to the beekeeper in the busy season as to have goods delivered just when they are wanted most. It isn't always possible to ship goods from a distant factory and have them reach destination within a day or two, as is sometimes necessary during the height of the season, but with distributing-houses located in the large shipping-centers we are able to supply beekeepers everywhere, with no loss of time and with minimum transportation charges.

Send Your Hurry Orders

to any one of the offices listed below, and let us show you what we can do for you in point of service. Cars are going to these branches at the rate of two or three a week, so the stocks are new and fresh, and we usually have just what you want. If it isn't in stock at your nearest branch our manager will include your order with his specifications and you may have your goods come in the next car, thereby saving on transportation charges and getting the goods in better shape than you would by local freight.

Whatever Your Wants

we can supply you, and, of course, there is no question about the quality of our goods. The name "ROOT" in connection with bee-supplies means the best of every thing in this line, and the best is always the cheapest, as our customers will testify. If you have never used our supplies you should make a trial of them this season. Once used, we are sure you will want no other.

I have just received my goods, order No. 10,739. I am more than pleased with them. I had intended to make my hives, but when I received the sample hive and saw the No. 1 pine lumber from which it was made, and considering the workmanship, I am satisfied I can buy cheaper than I can make them; enough cheaper to save the price of the lumber.

W. T. FALCONER MFG. COMPANY,

Where the good bee-hives come from
Falconer, N. Y.

Honey Markets

EASTERN GRADING RULES FOR COMB HONEY.

FANCY.—All sections well filled, combs straight, firmly attached to all four sides, the combs unsoiled by travel-stain or otherwise, all the cells sealed except an occasional one, the outside surface of the wood well scraped of propolis.

A No. 1.—All sections well filled except the row of cells next to the wood; combs straight; one-eighth part of comb surface soiled, or the entire surface slightly soiled; the outside surface of the wood well scraped of propolis.

No. 1.—All sections well filled except the row of cells next to the wood; combs comparatively even; one-eighth part of comb surface soiled, or the entire surface slightly soiled.

No. 2.—Three-fourths of the total surface must be filled and sealed.

No. 3.—Must weigh at least half as much as a full-weight section.

In addition to this the honey is to be classified according to color, using the terms white, amber, and dark; that is, there will be "Fancy white," "No. 1 Dark," etc.

NEW COMB-HONEY GRADING-RULES ADOPTED BY THE COLORADO STATE BEE-KEEPERS' ASSOCIATION.

No. 1 WHITE.—Sections to be well filled and evenly capped except the outside row, next to the wood; honey white or slightly amber, comb and cappings white, and not projecting beyond the wood; wood to be well cleaned; cases of separated honey to average 21 pounds net per case of 24 sections, no section in this grade to weigh less than 13½ ounces.

Cases of half-separated honey to average not less than 22 pounds net per case of 24 sections.

Cases of unseparated honey to average not less than 23 pounds net per case of 24 sections.

No. 1 LIGHT AMBER.—Sections to be well filled and evenly capped, except the outside row, next to the wood; honey white or light amber; comb and cappings from white to off color, but not dark; comb not projecting beyond the wood; wood to be well cleaned.

Cases of separated honey to average 21 pounds net per case of 24 sections; no section in this grade to weigh less than 13½ ounces.

Cases of half-separated honey to average not less than 22 pounds net per case of 24 sections.

Cases of unseparated honey to average not less than 23 pounds net per case of 24 sections.

No. 2.—This includes all white honey, and amber honey not included in the above grades; sections to be fairly well filled and capped, no more than 25 uncapped cells, exclusive of outside row, permitted in this grade, wood to be well cleaned, no section in this grade to weigh less than 12 ounces.

Cases of separated honey to average not less than 19 pounds net.

Cases of half-separated honey to average not less than 20 pounds net per case of 24 sections.

Cases of unseparated honey to average not less than 21 pounds net per case of 24 sections.

BOSTON.—We quote fancy white comb at 17 to 18; light amber, 15; amber, 14; fancy white extracted, 10 to 11; light amber, 9 to 10; amber, 9. Beeswax, 30. Boston, May 2. **BLAKE-LEE CO.**

INDIANAPOLIS.—White comb sells at 18 cents in ten-case lots. Amber grades are in slow demand at lower figures. Best extracted sells at 11 to 12 in five-gallon cans. Jobbing houses are well stocked, but producers are not now offering any honey. Beeswax is in good demand, and producers are being paid 31 cts. per lb. Indianapolis, May 2.

WALTER S. POWDER.

ZANESVILLE.—The market remains quiet. The supply of honey still seems to balance the demand. Former prices are still in effect. In small lots, best grades of white comb bring 20 cts. There is practically nothing doing in extracted. Producers are offered for beeswax 29 cts. in cash or 31 in exchange for bee-supplies.

Zanesville, O., May 2.

E. W. PEIRCE.

CINCINNATI.—At this season of the year we aim to close out all lots of comb honey so that the market will be bare for a while in order to welcome the new crop "with a vengeance" when it comes in. We are selling the fancy comb honey we have at \$3.65 to \$3.75 to wholesaler, and \$3.80 to \$4.00 to retailer. Our fanciest extracted honey in crates of two 60-lb. cans we are selling at from 8 to 10 cents, according to the quality and quantity purchased; and amber honey in barrels at 6 to 7½. For choice bright-yellow beeswax we are paying 30 cts. in cash (delivered here), or 32 in trade.

Cincinnati, May 3. **THE FRED W. MUTH CO.**

ST. LOUIS.—There is no change in our honey market. Comb honey is almost entirely sold out and quotations are nominal. Extracted honey is in small supply, and barely any demand. We quote fancy white comb at 16 to 17 cts.; No. 1 white, 15 to 16; light amber, 13 to 14; dark, 8 to 11. Broken and leaking honey sells at much less. Extracted California light amber brings 8½ to 9; Southern light amber, 8 to 8½ in five-gallon cans; Southern in barrels and half-barrels 7 to 7½ for light amber; dark, less. Beeswax, prime, brings 30 cts.; inferior and impure, less.

R. HARTMANN PRODUCE COMPANY.

St. Louis, May 7.

NEW YORK.—Our market is practically bare of comb honey; and what few odd lots arrive now and then find ready sale at from 15 to 17 for white, and 12 to 14 for light amber and No. 2 amber. As to extracted honey, the market is inactive, and the demand not up to that of former years, with more than sufficient supplies to meet demands. Prices are gradually declining all along the line, but we expect to be able to dispose of our holdings before the new crop arrives. We quote California sage at from 9 to 9½; light-amber alfalfa, 6 to 6½; buck-wheat, 6. In large quantities even these prices would have to be shaded in order to effect sales. The new crop of West Indian is now beginning to arrive quite freely, and is selling at from 68 to 75 cts. per gallon, according to quality. Beeswax is firm and steady at 30 to 31.

New York, May 3. **HILDRETH & SEGELKEN.**

BEES REQUIRE UP-TO-DATE WORKSHOPS

MUTH'S SPECIAL and IDEAL METAL-COVERED Dovetailed Hives are bought by the practical bee-keeper. Honey-board and all regular fixtures with each hive; finest lumber and workmanship used in the manufacture of our Bee Hives. Fully illustrated in our big catalog. Send for it to-day.

THE FRED W. MUTH CO.

"THE BUSY BEE MEN"

51 WALNUT STREET

CINCINNATI, OHIO

We Pay the Highest Cash Market Price for Honey and Beeswax Always

The season has opened up more favorably, after all, than many beekeepers anticipated, and many find themselves unprepared for the swarming period and honey-flow which is just before them. Extra hives just now may mean almost a double output of honey, and we can get these hives to you at once. We have a large and complete stock of all kinds and combinations, and can fill your order the day it is received.

If you are producing comb honey the Danzenbaker hive will give you most excellent satisfaction. Reports from large users of this hive show that with it a very large percentage of fancy comb honey may be produced; and with a little extra protection it is an excellent wintering hive.

Another comb-honey hive that is very popular this season is the Buckeye double-walled hive. This is the new movable-bottom pattern, and the double-wall feature offers protection, not only in the winter, but at all seasons. This is particularly valuable in the early part of the season when sudden changes of temperature are apt to have disastrous results.

For the production of extracted honey there is no better hive than the regular ten-frame dovetailed pattern. This has been a standard for years, and will admit of a number of changes and combinations to suit local conditions and the season.

We have also, of course, our usual stock of all other supplies, and can handle your order for any item listed in our catalog with our usual promptness and dispatch. We are better equipped than any other dealer in this section to give special attention to hurry orders, and solicit a trial of our goods and our service.

The Purity of the SWEET-CLOVER SEED

Sold by The A. I. Root Co. Is Attested to by the
U. S. Government

READ THIS LETTER:

Brooksville, Ky., March 13, 1911.

The A. I. Root Co., Medina, Ohio.

Gentlemen.—Some time ago I sent to you for a sample of your white and yellow sweet-clover seed. After receiving the samples I sent them to Washington, D. C. The yellow hulled tested 99.71 per cent of pure seed; the unhulled white tested 99.11 per cent of pure seed. I think that is fine. I inclose you the sample that you sent me, and want you to send me 80 lbs. of the same lot that this sample is out of, or some equally good. Send the seed by freight.

Yours truly, H. A. JETT.

We have a booklet, published for free distribution, which tells THE TRUTH ABOUT SWEET CLOVER. Ask for your copy.

We can now supply fresh new seed of 1911 crop in all but the annual yellow at following

PRICES

In lots of—	11 lb.	10 lb	25 lb.	100 lb.
Hulled Yellow Annual (<i>Melilotus indica</i>), lb.	15c	12c	11c	10c
Unhulled Yellow Biennial (<i>Melilotus officinalis</i>).	25c	22c	21c	20c
Hulled White, Imported seed	27c	24c	23c	22c
Hulled White, Domestic seed	23c	20c	19c	18c
Unhulled White (<i>Meli-</i> <i>lotus alba</i>) per lb.	16c	14c	13c	12c

The prices are all subject to market changes.

As to the comparative value of the different varieties, we will say that the white, or *Melilotus alba*, is most common, and therefore the best known. The yellow is desirable because it begins blooming usually from two to four weeks earlier than the white. As to the two varieties of yellow, one of the experiment stations has said there was a distinction without a difference.

PUBLICATIONS ON BEE CULTURE

Please use coupon below, checking
the numbers of items wanted.

The pamphlets and booklets listed
below are of more than ordinary interest:

- My First Season's Experience with the Honey-bee.** By the "Spectator," of the *Outlook*, of New York. A ten-page leaflet detailing the experiences of this well-known writer. You will read the leaflet through before you lay it down. Free.
- The Bee-keeper and Fruit-grower.** A 15-page booklet giving actual facts regarding the value of bees to fruit, and showing how bee-keeping may be doubly profitable to the fruit-grower. Fruit-growers are realizing as never before the necessity of having honey-bees in close proximity to their blossoming fruit. Free.
- Bee-keeping for Sedentary Folk.** A 24-page leaflet reciting the actual experiences of an amateur bee-keeper, showing what equipment is best, points derived, etc. Free.
- Catalog of Bee-keepers' Supplies.** Our complete catalog will be mailed free to any address on request.
- Habits of the Honey-bee.** By Dr. E. F. Phillips. A somewhat scientific handling of the habits and anatomy of the bee. Price 10 cts.
- How to Keep Bees.** A book of 228 pages detailing in a most interesting manner the experience of a beginner in such a way as to help other beginners. Price \$1.00 postpaid.
- The A B C of Bee Culture.** A complete encyclopedia of bees, of 576 pages, fully illustrated, \$1.50 postpaid; half leather, \$2.
- Cleanings in Bee Culture.** A 64-page illustrated semi-monthly magazine, the leading exponent of bee culture in this country. Ten cents per issue, but to new subscribers we will furnish it six months for 25 cts.
- Back-yard Bee-keeping.** Six interesting lessons written in readable newspaper style. Many facts to encourage the "City Bound" man or woman with the back-to-the-land longing. Free.
- Truth About Sweet Clover.** Interesting booklet of nearly 100 pages. Tells of value of sweet clover for honey, for plowing under, as fertilizers of the soil, and food for horses, cattle, swine, sheep, etc. Free.

BLANKE'S BEE BOOK FREE!

A Combined Catalog
and Hand-book on
Bee Culture.

This book is more than a catalog of supplies—contains many helpful hints on bee culture. In the back is a catechism for beginners in bee culture, and even the old-timers can get much useful information out of it.

It describes our complete line of hives, supers, extractors, smokers, etc.

The book costs you nothing. Write for it. At the same time you might tell us what you are needing in bee supplies, and let us write you a special letter on the subject.

The Welcome Honey-flow...

to which you have been looking forward through the long dreary months of winter, is at last at hand. Are you ready to take full advantage of it? Unless, with wise forethought, you have already purchased the hives, sections, foundation, or other supplies, you will probably require, it is high time that your wants crystallize into an order. Forecasts are at best uncertain, but present indications are for a good honey-flow, and its value to you will depend upon the degree of preparation you have made for it. There is yet just time to secure the necessary supplies and properly arrange your equipment. Longer delay may mean regrettable loss.

The following letter will give you a tip as to where you can secure best goods, best treatment, and most prompt delivery.

Mr. E. W. Peirce,
Zanesville, Ohio.

The bee-supplies were received March 4th. The February cash discount was received also. Many thanks for promptness and kind treatment.

Yours truly,
FRED BAILEY.

Thornton, W. Va.

Mr. Bailey is but one of hundreds of beekeepers who find in ROOT QUALITY—PEIRCE SERVICE absolute satisfaction. If you are not already of this number, you will be eventually.

A postal card addressed as below will bring you a large illustrated catalog.

Why Not REAR Your Own QUEENS?

Doolittle's "Scientific Queen-Rearing" and the
American Bee Journal for 1912—Both for Only **\$1.00**

Every Bee-keeper Should Have Both Book and Bee-Paper.

DOOOLITTLE'S "Scientific Queen-Rearing" book contains 126 pages, and is bound in leatherette with round corners. It tells in the clearest way possible just how the famous queen-breeder, Mr. G. M. Doolittle, rears the best of queen-bees in perfect accord with Nature's way. It is for both amateur and veteran in bee-keeping. As all know, Mr. Doolittle has spent some 40 years in rearing queens and producing honey. He has no superior as a queen-breeder. You can learn to rear fine queens by following his directions. Read up now before the bee season is here.

You will not regret having this book, which also gives his management of the bees for the production of honey.

The book, and the American Bee Journal for 1912, for only \$1.00, is certainly a big bargain for you. Send the \$1.00 now, and we will begin your subscription with January 1, 1912, and mail you the book. Sample copy of the Bee Journal free. Address

GEORGE W. YORK & CO.,

117 No. Jefferson St., Chicago, Ill.

GOODS ordered now will reach you in time for your first swarms. More and more are our customers adopting the plan of ordering early.

Yes, we will ship at once, and send Root's Goods only, and at their prices. Save time and freight charges by ordering at Root's Headquarters in Michigan.

Golden Italian Bees

Buttercup Strain

Queens, Nuclei, and Full Colonies

I have kept and studied bees for fifty years; have bought queens for improvement of stock from the most noted breeders from Langstroth down to the present day.

My foundation stock, from which my improved "Buttercup Strain" was evolved, was originally from Alley and Pratt (Swarthmore).

They are very handsome, very gentle, very hardy, and great hustlers. Wintered 75 colonies on summer stands last winter—the hardest on record. Made more honey per colony last season (very poor) than ever before. Have no trace of disease.

This season I shall propagate and offer for sale, after June 1st, as follows:

Price of Bees and Queens

One full colony in 11-2 story 8-frame complete	\$10.00
One full colony, 8 frame, one story only	8.25
Nucleus of Bees in Light Shipping-cases after June 1	
One-frame nucleus and untested queen	\$ 2.50
Two-frame " " " "	3.00
Three-frame " " " "	3.50
Colony or nucleus with tested queen, add	1.00

Queens after June 1

Selected tested queen	\$ 2.50
Tested queen	1.50
Untested queen	1.00

The colonies I offer consist of eight frames of bees, honey, and brood, in a ten-frame Langstroth body.

They will be securely packed and sent by express, at purchaser's expense.

For larger quantities of bees or queens, write for prices. Circulars free.

ISAAC F. LITTINGHAST, FACTORYVILLE, PA.
State Apiary Inspector

1912 QUEENS OF QUALITY AND QUANTITY

We are now ready to fill all orders promptly for our Three-banded and Golden Italian queens. Our queens are bred strictly for honey-gathering qualities. Untested, each, \$1.00, or six for \$5.00, or \$3.00 a dozen. Tested, \$1.25 each, or six for \$6.50, or \$12.00 per dozen. Select tested, \$1.50 each. Breeders, the very best, \$5.00 each. Write for special prices on lots of 50 to 100 queens. Will replace all dead queens that are dead on arrival, and returned in the cage we mailed them in. 25 years a queen-breeder. Send all orders to

IN THEIR SEASON**

EARL M. NICHOLS

Successor to W. W. Cary & Son

Lyonsville, . . . Massachusetts

GOLDEN ITALIAN QUEENS

\$1.00 each; six for \$5.00; twelve for \$9.00—
untested and warranted.

J. B. CASE, PORT ORANGE, FLA.

W. H. Laws

is now mailing queens every day except Sunday. These queens are going to almost every State in the Union. A statement in public print says, "The postoffice at Beeville has probably cancelled more stamps on queen-cages than any other postoffice in the world." Whether this is true or not, it is true that Laws' queens are giving eminent satisfaction, and old customers are continually renewing their orders.

I am breeding but the one strain of three-banded Red-clover Stock Italians. A square deal and good queens are all that I can promise. I shall be pleased to have your order, which will be filled in rotation; however, I can also take care of rush orders.

Prices: Single queen, \$1.00; six for \$5.00; 100, \$75.00.

HELP CLEANING

BEE SMOKER

A. G. WOODMAN CO., Grand Rapids, Mich.

"If goods are wanted quick, send to Pouder."

(Twenty-third year.)

If I should deliver Bee Supplies as this dear old lady delivered her eggs I would soon be in possession of a lot of complaints. After all, it's service that appeals to the careful buyer. This house not only has the inclination, but the facilities and the resources, to serve its patrons most satisfactorily.

Hives, sections, comb foundation, and smokers are now in much demand, and I would like to show you how promptly I can deliver any of these goods to you, regardless of distance or location. My nailed and painted hives are carefully crated, and wrapped in paper—all being done at the Root factory, where facilities are perfection—and then delivered to me in full carloads of assorted goods. If you should require one of these hives you would find it clean, accurate, and built like a piece of parlor furniture. No wonder that the bee business is fascinating when we consider the facilities at hand to-day; and the kind and appreciative expressions from my patrons about these goods is very gratifying to me.

You will find my catalog worthy of your attention, and I would like to place it in your hands free.

Remember me when you have beeswax to offer, and you will find me prompt with returns and highest market price.

When You Buy Lewis Beeware You Get ———

Lewis Quality—which means that all Lewis Hives are made out of clear white pine, and Lewis sections made out of fine bright basswood. The material in these goods is the best obtainable, and selected by experts.

Lewis Workmanship—The Lewis factory is equipped with the latest improved machinery, constantly watched over by experts. The Lewis head mechanic has had thirty-five years of bee-supply experience, the superintendent of bee-hive department twenty-nine years; the superintendent of sections twenty-eight years. These and many other skilled men have a hand in all the Lewis goods you buy.

Lewis Packing—All Lewis Beeware is carefully and accurately packed. A patent woven wood and wire package, made only by the Lewis Company, is employed largely in packing. This makes the package light, compact, and damage-proof.

Lewis Service—Years ago all goods were shipped direct from the factory, with attending high freight rates and delays during the honey season. Now Lewis Beeware can be obtained almost at your own door. Over thirty distributing houses carrying Lewis Beeware by the carload are dotted all over the United States and foreign countries. Write for the name of the one nearest you.

G. B. Lewis Company, Manufacturers of Beeware, Watertown, Wisconsin

Every Bee-keeper Should Own and Read
"The Manual of the Apiary"

By PROF. A. J. COOK

This interesting book is a very complete treatise on bees and bee-keeping, and is particularly valuable where one is interested in the anatomy and physiology of the bee, which has been very completely covered in this work. It is also valuable for its chapter on honey-plants, or bee-botany; 540 pages with good illustrations; bound in cloth. Price, by mail, \$1.15; \$1.00 by express or freight. . . . Order from the author,

A. J. Cook, Pomona College, Claremont, Cal.
Or from Dealers in Bee-supplies Everywhere

See the Glass Cap

The very best jar from the cap—down!

It is no trouble to "jar" things these days. Even many vegetables that you never thought of "canning"—it is *easy* in these all-glass jars.

No spoiled vegetables or fruit—no sweltering over hot stoves for nothing! Just put up most fruit and "garden stuff" *whole* and get *best* results from the

E-Z SEAL JAR

This jar is *safe*. The glass cap fastens with a wire spring—it closes with a *touch* and opens with a *tilt*—no wrist-turning, no neck-twisting, no shattering or splattering!

Then—the heavy, green-tinted glass keeps out the light. Your fruit opens fresh and plump. Try the E-Z Seal way.

Free Jar—Free Book

Cut out this coupon, take it to your grocer—he will give you one E-Z Seal Jar—FREE. Be sure and write us for FREE Book of Recipes—it tells many things you should know.

In order to secure free jar, present this coupon to your dealer before September 1, 1912, properly filled out.

Did You Write to Shafer?

SEE AD. IN LAST ISSUE

Our Foundation Factory

This has been running night and day this season to keep up with our orders. We are not a single order behind, and do not intend to be. You may judge, therefore, what prompt attention your orders will have at our hands. Not only this, but for quality of goods ours have no equal. We have scores of letters from satisfied users of our foundation, and not a single complaint. Let us put your name on our record.

Our stock of pails, cans, and cases is more complete than ever before. We have now adopted a six-pound pail of the size suggested by the Texas Beekeepers' Association. It is an inch taller than formerly, and will not cause dissatisfaction among dealers because of short weight. We have also made an improvement in the cases holding the twelve-pound friction-top pails, adding partitions so that they are stronger. You will not be disappointed in the quality of any of these goods.

We have our usual stock of Root's goods. All the principal items listed in the catalog on hand ready for quick shipment. Frames, hives, sections, smokers, etc., and honey-extractors of many sizes and styles. If you haven't investigated the advantages of the power extractors, we suggest that you do so this season. Instead of being an expensive equipment you will find it a money and honey saving investment. Full particulars on request.

We can also fill your orders for queens promptly, and we are sure our stock will please you. Special prices on quantity lots for requeening large yards.

Topperwein & Mayfield,

Corner Nolan and Cherry Sts.

San Antonio, Texas.

These Remarkable Books Practically

FREE

We have now completed arrangements by which we offer all readers, in connection with special subscription offers, any of this great series of booklets called

"MONEY-MAKING SECRETS"

POULTRY SECRETS: First published in 1908, this collection of the carefully-guarded secrets of famous poultrymen created a sensation in poultry circles. Every secret is valuable and every one has passed severe tests of its usefulness. 64 pages, illustrated. 15th Edition, 110th thousand.

HORSE SECRETS: Compiled and written by DR. A. S. ALEXANDER, of Wisconsin, the eminent veterinarian. Exposes the swindling methods of "gyps" and crooked dealers. Also many feeding and fattening secrets. Invaluable to horse buyers and owners. 64 pages, illustrated. 9th Edition, 85th thousand.

THE MILLION EGG FARM: Describing the enormous business and plant of J. M. Foster's Rancocas Farm, where 18,000 laying hens produced last year the amazing total of 1,121,478 eggs. Written 'specially for beginners. 80 pages, profusely illustrated. 4th Edition, 35th thousand.

THE CURTISS POULTRY BOOK: The story of the Curtiss brothers and their great Niagara Farm, built up from nothing to an annual business approximating \$100,000 per year. Ducks, eggs, broilers, and cut clover are their staples. A remarkable story. 56 pages, illustrated. 3rd Edition, 30th thousand.

\$6.41 PER HEN PER YEAR: Telling of the great success of the Cornings, whose methods of production of high-grade sterile eggs for market revolutionized this branch of the poultry business. 64 pages, illustrated. 14th Edition, 150th thousand.

DUCK DOLLARS: There is money in ducks. The Weber brothers market about 40,000 ducklings each year, and make a clear net profit of 50 cents on each one. This new booklet tells exactly how, with valuable advice for beginners as to operation and markets. 88 pages, illustrated.

FALL-BEARING STRAWBERRY SECRETS: The first complete hand-book covering the culture of this wonderful new fruit. Any one who can raise June strawberries can raise the Fall-bearers, but culture is different. Those who started first are reaping the high market profits. 64 pages, illustrated.

TURKEY SECRETS: The way to make turkeys a profitable farm crop, as demonstrated by HORACE VOSE of Rhode Island, the veteran turkey raiser who supplies the turkey for the President's Thanksgiving dinner each year. Instructive and enlightening. 64 pages, freely illustrated.

GARDEN GOLD: A new booklet written for people with small gardens, showing how to raise your own vegetables in these days of high prices, and SAVE money. And how to MAKE money by selling your surplus. Splendid for people with back yards only. 64 pages, illustrated.

SHALL I FARM? For city people trying to decide whether or not to go to the country. No golden promises, but a clear, impartial, unbiased, unprejudiced weighing of the subject. All the advantages and disadvantages of all kinds of farming plainly set forth. Nothing like it ever before printed. 64 pages.

So popular are these booklets, and so valuable their contents, that nearly

400,000 COPIES HAVE BEEN SOLD

during the last three years. Each is the very latest word in its own particular field—together they cover new discoveries, secret methods, exposures, new systems, little known information, and astonishing achievements in many lines.

We Offer { Any one of these booklets, postpaid (Your Choice), "GLEANINGS," 1 year, FARM JOURNAL, till December, 1915 } All three for **\$1.00**

\$1.50 to subscribers in Canada, Philadelphia, and foreign countries, on account of extra postage. Extra booklets, 20c. each. Booklet and papers may go to different addresses if necessary, but these

BOOKLETS CANNOT BE OBTAINED SEPARATELY—ONLY IN THIS COMBINATION.

THIS PAPER is well known to you, and requires no description or praise here.

The FARM JOURNAL is the standard farm and home paper—foremost in the world. It has more than 750,000 subscribers. It is up-to-date, clean, boiled-down, honest. It knows what to say, and can stop when it has said it. It is for the poultryman, gardener, horse owner, dairyman, grain grower, fruitman, the farmer, the villager, the suburbanite, the man who lives in the country, and those who would like to, the women folks, the boys and girls. In short, it is for YOU. Cheerful, entertaining, intensely practical, absolutely clean. When the time is up it will stop.

GEO. M. STEELE, 30 South 40th St., Philadelphia, Pa.

FOR SALE.—Italian queens bred from the best honey-gathering strains obtainable. Untested, 75 cts.; select, \$1.00; tested, \$1.25; select tested, \$1.50. Nuclei in May, without queen, one-frame, \$1.75; two-frame, \$3.00; three-frame, \$3.50. For queens and nuclei in quantity lots, and bees by the pound, write for prices and circular.

ROBERT B. SPICER, Wharton, N. J.

WANTED.—Healthy bees by the pound—good laying young queen with each pound, of any color or race except golden. May, June, or July delivery. Quote prices, properly packed, delivered at your express office. Any sized lots, as the hard winter has furnished many empties to fill. Quote without queens also.

THOS. J. STANLEY,
Manzanola, Otero Co., Colo.

Our golden Italian queens produce the brightest and gentlest golden bees that we ever had; great honey-gatherers, and not bad robbers. Our three-band are the best of their kind. Price of either, untested, \$1.00; tested, \$2.00; breeders, \$3.00. We will make a very low price later in the season.

C. W. PHELPS & SON,
Dealers in beekeepers' supplies, Binghamton, N. Y.

Position Wanted

WANTED.—Position with beekeeper in the States; prefer the East. B. LISS, Lewiston, Oriente, Cuba.

Real Estate

FOR SALE.—120 acres of nearly all river-bottom land; one million feet timber; 100 colonies healthy bees in good location, up-to-date hives, and including fixtures. Price \$5500—\$3500 cash; balance on time. Address W. F. AULT, Potlatch, Wash.

FOR SALE.—A forty-acre mountain home; good house, well, and other improvements; requires no irrigation; grows any kind of crops; fine location for bees. Three miles from postoffice and railroad. C. G. RENNINGER, Box 11, Arden, Wash.

FOR SALE.—Fine home place in Medina—ten-room house with two bathrooms, electric lights, gas and furnace; three cisterns; fine barn and very large lot, including good garden spot, place for chickens, and plenty of fruit. One block to square and half a block from interurban line. Eight limited cars daily to Cleveland—running time one hour and fifteen minutes to the square. Cash only. Address C. M. C., GLEANINGS, Medina, O.

Miscellaneous

FOR SALE.—One new Oliver typewriter; has never been used; latest printtype style of type; in perfect condition. S. WHANN, Polk, Pa.

WANTED.—Copies of GLEANINGS in good condition, for Feb. 1, 1911 and Feb. 1, 1912. Subscribers having a spare copy for either of these dates will please notify us by post card. THE A. I. ROOT CO., Medina, O.

FOR SALE.—Holsman automobile—one of the reliable makes. Owner (a doctor) having bought a higher-powered car will sacrifice at \$135. Speak quick. The car is worth much more.

F. B. CAVANAGH, Hebron, Ind.

Indian Runner Ducks

Indian Runner duck eggs, 15 for \$1.00.

J. F. MICHAEL, Winchester, Ind.

Fawn and white Indian Runner duck eggs, \$1.00 per 11; \$7.00 per 100. Day-old ducklings, 25 cts. each. Mating-list free. KENT JENNINGS, Mt. Gilead, O.

Real bargains. In stock, 2-lb. pullets, chicks, eggs; heavy-laying Barred Rocks, S. C. R. I. Reds, S. C. White Leghorns, Pekin ducks—the kind we all want. No strikers during winter. Catalog free. CRYSTAL SPRING FARMS, Rt. 3, Lititz, Pa.

BUTTERCUPS.—Eggs and stock for sale. Breaking up breeding-pens of present season; offer 12 fine pullets, chosen from flock raised last June, at \$3.00 each; 3 hens, \$1.50 each; cockerel, 11 months, \$4.00; cock mated with hens, \$2.00. Will make attractive price on one or two pens from the above. Eggs from my best birds, \$3.00 per 15. Fertility and satisfaction guaranteed. Write me your Buttercup requirements. Reference, The A. I. Root Co.

T. P. HALLOCK,
(Director Am. Buttercup Club.) Medina, O.

Bee-keepers' Directory

Nutmeg Italian queens, leather color, after June 1, \$1.00. A. W. YATES, Hartford, Ct.

Well-bred bees and queens. Hives and supplies. J. H. M. COOK, 70 Cortlandt St., New York.

Improved golden-yellow Italian queens for 1912; beautiful, hustling, gentle workers. Send for price list to E. E. LAWRENCE, Doniphan, Mo.

QUEENS.—Improved red-clover Italians, bred for business; June 1 to Nov. 15, untested queens, 75 cts.; select, \$1.00; tested, \$1.25 each. Safe arrival and satisfaction guaranteed. H. C. CLEMONS, Boyd, Ky.

QUIRIN'S famous improved Italian queens, nuclei, colonies, and bees by the pound, ready in May. Our stock is northern-bred and hardy; five yards wintered on summer stands in 1908 and 1909 without a single loss. For prices, send for circular.

QUIRIN-THE-QUEEN-BREEDER, Bellevue, O.

Special Notices

By OUR BUSINESS MANAGER

Our Philadelphia manager, Mr. Wm. A. Selser, expects to continue lectures on beekeeping again this year on our roof at 10 Vine Street, Philadelphia, Pa., during May and June, every Tuesday and Friday, between 11 and 12 o'clock. Visitors desiring to see the actual work with the bees, and the various manipulations of the hives, will be welcome at these demonstrations. Of course, visitors are welcome at our store during all business hours, but for lectures and demonstration work are invited particularly at the hours named.

SECOND-HAND CANS.

We have a large stock of good second-hand 60-lb. honey cans with screws, two in a case. We empty a good many hundreds of these cans during a year, and we save only those which are in good condition. While we never recommend the use of second-hand cans for choice white honey these we have in stock are so well selected that we would almost risk good honey in them, especially if they were well scalded out just before using. We leave a coating of honey in the can because it preserves it from rusting; but the cans should be scalded out just before filling again. Price \$3.00 for 10 boxes; 25 cts. a box in lots of 25 or over. Can supply a carload.

SECOND-HAND FOUNDATION-MILLS.

We have to offer the following list of foundation-machines which have been used, but are in fair condition. In many cases they will answer as well as a new machine where you have only a moderate output. Send for samples of any mill in the list which may interest you.

No. 0121, 2½x10-inch heavy hex. brood mill. An old-style Dunham machine without cam adjustment; in rather poor condition. Price \$8.00.

No. 0129, 2x10 round cell medium-brood mill, old-style frame, in good condition. Price \$14.00.

No. 0139, 2½x6 hexagonal thin-super mill, in very good condition. Price \$14.00.

No. 0140, 2½x6 hexagonal thin-super mill, in very good condition. Price \$14.00.

No. 0151, 2½x6 hexagonal cell, extra thin-super mill, one bad cell, otherwise in good condition. Price \$12.00.

No. 0152, 2½x6 hexagonal thin-super mill, extra good for regular-width super foundation. Price \$12.00.

No. 0153, 2½x6 hexagonal thin-super mill. No. 0154, ditto. Both in very good condition. Price \$14.00 each.

No. 0156, 2½x6 extra thin-super mill, fair. Price \$10.00.

No. 0157, 2½x6 thin-super mill, in good condition. Price \$12.00.

No. 0160, 2½ x 6 hexagonal thin-super mill in good condition. Price \$12.00.

No. 0164, 2½ x 6 hexagonal thin-super mill in fair condition. Price \$10.00.

No. 0165, 2½ x 6 hexagonal extra-thin-super mill in fair condition. Price \$11.00.

No. 0166, 2½ x 6 hexagonal thin-super mill in extra good condition. Price \$14.00.

No. 0167, 2½ x 6 hexagonal extra-thin-super mill in fair condition. Price \$11.00.

No. 0168, 2½ x 6 hexagonal thin-super mill in good condition. Price \$12.00.

No. 0169, 2½ x 6 hexagonal extra-thin-super mill in extra good condition. Price \$15.00.

No. 0147, 2½ x 6 thin-super mill in extra good condition. Price \$15.00.

No. 0175, 2½ x 10 light-brood mill in good condition. Price \$16.00.

No. 0176, 2½ x 6 extra thin-super mill in fair condition. Price \$12.00.

Convention Notices.

BEEKEEPERS' CONVENTION AT MASSACHUSETTS AGRICULTURAL COLLEGE, MAY 29, JUNE 12, 1912.

ANNUAL CONVENTION AND FIELD DAYS,
JUNE 12 AND 13.

The annual short course in beekeeping at the Massachusetts Agricultural College is offered from May 29 to June 13, 1912, to be concluded by a convention and field days. The course and convention is under the personal direction of Dr. B. N. Gates, in charge of the apicultural work of the college and State.

The course includes lecture, laboratory, demonstrational, apiary, and field work, as well as excursions to large apiaries and queen-rearing plants. The concluding convention should bring together many representative apiarists of the East, besides the noted authorities and commercial men.

Among the noted men who have been secured to lecture are:

Dr. James P. Porter, Dean of Clark College, Worcester, Mass.; Dr. W. P. Brooks, Director of the Massachusetts Experiment Station; Mr. A. A. Byard, West Chesterfield, N. H.; Mr. A. W. Yates, Hartford, Ct.; Mr. R. H. Holmes, Shoreham, Vt.; Mr. F. Danzenbaker, Norfolk, Va.; and many other men of prominence will be at this convention.

Because of the fact that such an eminent corps of lecturers and demonstrators have been secured, an exceptional opportunity is offered to men who have apiaries, men interested in the best methods of handling bees; rearing of queens; construction and use of different kinds of hives; comb and extracted honey; increasing of colonies; control of swarming; the hiving of bees. Especial emphasis will be given to the diseases of bees and their treatment, which are now known to occur in practically all parts of the State, thus giving an opportunity to see practical applications of modern scientific principles.

The conference will not only take up the bee industry from the commercial point of view—that is, the production of honey—but their value to the orchardist, the small-fruit grower, to the squash, cucumber, and melon grower, and to the cranberry-raiser.

It is estimated by Dr. B. N. Gates that at least \$30,000 worth of honey could be cropped in Berkshire County alone, and at the same time there would remain from \$10,000 to \$15,000 worth of bees for another harvest.

Are the beekeepers of Massachusetts going to sit by and see interests outside of the State seize this business opportunity? But already it is said that out-of-State beekeepers are proposing to put bees in the Berkshire hills as a business proposition. It should be remembered, also, that there are other good localities for bees in Massachusetts. Opportunities are numerous for the practical beekeepers who will employ modern methods.

For details and announcements, address William D. Hurd, Director of Extension Service, Massachusetts Agricultural College, Amherst, Mass.

Reo the Fifth

By R. E. Olds, Designer

My Ideal Car

Reo the Fifth—my latest creation—shows what I regard as ideal in a car.

It is not too large nor too small, too light nor too heavy. It is long, roomy, speedy and powerful.

It gives one a real car, without being wasteful of gasoline or oil.

Experienced motorists, more and more, are adopting this type of car. So this factory now is building no other model.

The Little Price

The price of this car is no indication of what I've embodied in it. This price, in the long run, I regard as impossible. It is simply a passing sensation.

We have a model factory, splendidly equipped. Also enormous output. We have

worked for years to bring cost of production down to the lowest limit.

This year we save nearly \$200 per car by building only one chassis in this great plant. We ought to, and will, undersell other cars of this size.

But this initial price is too low. A slight advance in materials—a little slip in production—will compel a higher price. And those who delay must expect it.

It is Superb

Here is a car where every detail shows the final touch.

The lines of the car are impressive. The car is long and low, big-wheeled and over-tired. Never was a car more comfortable.

The body finish consists of 17 coats. The upholstering is deep, made of genu-

ine leather, filled with hair.

The lamps are enameled. Even the engine is nickel trimmed.

You expect these things in the costliest cars. But you never saw greater perfection in detail than in Reo the Fifth at \$1,055.

In most moderate-priced cars close inspection shows stinting. It reveals many petty economies.

You find wheels too small, tires too small, springs too light. Countless details show the signs of skimping.

Here you find the opposite extreme. Were the car to sell at twice the price not a detail could be bettered. Nor could I add to this car, inside or outside, a single iota of value.

This car is built to represent the very best I know.

Reo the Fifth

Top and windshield not included in price. We equip this car with mohair top, side curtains and slip cover, windshield, gas-tank, and speedometer—all for \$100 extra. SELF-STARTER, IF WANTED, \$20 EXTRA.

It Took 25 Years to Build It

I have spent 25 years in active experience to learn how to build a car like this.

This is my 24th model. It embodies all I have learned from building tens of thousands of cars.

No man can possibly build a car like this without knowing what the years have taught me.

Care and Caution

The best I have learned is the need for care and caution — for careful inspection, for repeated tests, and for big margins of safety.

All the steel I use is analyzed, so I know the exact alloy. I take nobody's word in this matter.

The axles, driving shaft, crank shaft, etc., are all much larger than necessary—to guard against any contingency.

I test my gears in a crushing machine with 50 tons' capacity.

I used to make tests, as others do, with a hammer. No, I know to exactness what each gear will stand.

The differential was designed for a 45 h. p. engine.

I put the magneto to a radical test, to know it can never fall down. My carburetor is doubly heated—with hot air and hot water—to deal with low grade gasoline. Thus I eliminate half the common troubles.

Instead of ball bearings I use roller bearings — Timken and Hyatt High Duty. There are only three ball bearings in this whole car.

Tests and inspections are carried to the extreme, so that errors can't slip by.

Such methods seem extreme to men of lesser experience. But a man who has built cars for 25 years learns that he can't be too careful.

The Best I Can Do

The car represents the best I can do—down to the smallest detail. Men will never build cars much better.

The materials are the best that men know. The features are the best yet invented. More of care, skill or caution cannot be conceived.

I have built this car for the thousands of men who have learned to have faith in me. And it justifies that faith.

Ask for Catalog

Our catalog shows the various styles of body, and pictures the important details. The Roadster type sells for \$1,000.

I never knew a car which met such a welcome as Reo the Fifth has met. It is shown by dealers in 1000 towns. When we send our our books we'll tell you where to see it. Address

R. M. Owen & Co.

General Sales Agents for

Reo Motor Car Co., Lansing, Mich.

Canadian Factory, St. Catharines, Ont.

New Center Control No Levers--No Reaching

This new center control is exclusive to Reo the Fifth. All the gear shifting is done by moving this handle less than three inches in each of four directions.

There are no side levers, so the entrance in front is clear.

Both brakes are operated by foot pedals. One pedal also operates the clutch. The driver sits, as he should sit, on the left hand side, close to the cars he passes. Heretofore, this was possible in electric cars only. That's one of the unique features.

Printype — OLIVER Typewriter

The Only Writing Machine in the World
that Successfully TYPEWRITES PRINT

--17 Cents a Day!

The Printype Oliver Typewriter, which has crowded ten years of typewriter progress into the space of *months*, is now offered to the public for *17 Cents a Day!*

—Offered at the same price as an *ordinary* typewriter—*payable in pennies!*

The commanding importance of *Printype* is everywhere conceded.

For who does not see what it means to make the world's vast volume of typewritten matter *as readable as books or magazines!* The Printype Oliver Typewriter is equipped with beautiful Book Type, such as is used on the world's *printing presses*.

Printype is distinguished by marvelous clearness and beauty. It does away with all strain on eyesight which the old-style *outline* type imposes. Printype puts life and style and character into typewritten correspondence. It makes every letter, every numeral, every character, *"as plain as print."*

The complete story of *Printype* has never before been told. Here it is:

The Real Story of Printype

The idea from which "Printype" sprang resulted from the success of our type experts in equipping a typewriter used in our offices to write "The Oliver Typewriter" in our famous trade-mark

type just as the name appears on the outside of the machines and in all Oliver publicity.

The beautiful appearance and the marvelous clearness of the reproduction of our "ebony" trade-mark type, disclosed the possibilities of equipping The Oliver Typewriter to *write the entire English language in shaded letters!*

We worked for *years* on the plan and finally succeeded in producing, for exclusive use on The Oliver Typewriter, the wonderful shaded letters and numerals known to the world as "Printype."

The Public's Verdict

That the public is overwhelmingly in favor of Printype is impressively shown by this fact;

Already over 75 per cent of our entire output of Oliver Typewriters are "Printypes."

The public is *demanding* Printype in preference to the old-style type.

Within a year, at the present rate, *90 per cent of our total sales will be "Printypes."*

Thus the Oliver Typewriter, which first successfully introduced *visible writing*, is again to the fore with another revolutionary improvement — *Printype, the type that prints print!*

To Corporations: The Oliver Typewriter is used extensively by great concerns in all sections of the world. Our "17-Cents-a-Day" Plan is designed to help that large class of typewriter buyers who want the same typewriter that serves the great corporations, but prefer the easy system of purchase.

The masses want The Oliver Typewriter because it stands the test of the largest corporations.

Meet "Printype"—You'll Like Its Looks

Ask for Specimen Letter and "17-Cents-a-Day" Plan. Make the acquaintance of Printype, the reigning favorite of typewriter-dom. Ask for a letter written on The Printype Oliver Typewriter, which will introduce you to this beautiful new type. We will also be pleased to forward the "17-Cents-a-Day" Plan on request. Address Sales Department,

The OLIVER Typewriter Company

Gleanings in Bee Culture

VOL. XL. JUNE 1, 1912, NO. 11

ROOT'S BEEKEEPERS SUPPLIES

You may have a catalog of supplies; but if you haven't ours for 1912 you have missed something really worth while, and should get one at once. It is the largest and most complete ever published—more than a mere price list of supplies—a book that every beekeeper can read with pleasure and profit. Beginners will find answers to many perplexing questions, and advanced beekeepers timely suggestions that will save them money. Old customers are writing us frequently letters like the following:

Your catalog for 1912, designated ROOT'S BEEKEEPERS' SUPPLIES, is received, and I certainly thank you for this book. I have had your catalog on my desk for years, and have used Root's supplies all along. I note the enlargement and improvement in your new catalog, and notice many things I expect to add to my apiary.
Crystal City, Texas. C. W. Cox.

Our catalog this season also gives a full and complete list of books and booklets which we can supply. Many of these booklets are free, which doesn't mean that they are not worth reading, but simply that we want you to be informed on the subjects of which they treat. Send for a catalog, and check those in which you are interested.

Quick Deliveries

Next to having the best goods made, there is nothing so important to the beekeeper in the busy season as to have goods delivered just when they are wanted most. It isn't always possible to ship goods from a distant factory and have them reach destination within a day or two, as is sometimes necessary during the height of the season, but with distributing-houses located in the large shipping-centers we are able to supply beekeepers everywhere, with no loss of time and with minimum transportation charges.

Send Your Hurry Orders

to any one of the offices listed below, and let us show you what we can do for you in point of service. Cars are going to these branches at the rate of two or three a week, so the stocks are new and fresh, and we usually have just what you want. If it isn't in stock at your nearest branch our manager will include your order with his specifications and you may have your goods come in the next car, thereby saving on transportation charges and getting the goods in better shape than you would by local freight.

Whatever You Wants

we can supply you, and, of course, there is no question about the quality of our goods. The name "ROOT" in connection with bee-supplies means the best of every thing in this line, and the best is always the cheapest, as our customers will testify. If you have never used our supplies you should make a trial of them this season. Once used, we are sure you will want no other.

I have just received my goods, order No. 10,739. I am more than pleased with them. I had intended to make my hives, but when I received the sample hive and saw the No. 1 pine lumber from which it was made, and considering the workmanship, I am satisfied I can buy cheaper than I can make them; enough cheaper to save the price of the lumber.

Honey Markets

The prices listed below are intended to represent, as nearly as possible, the average market prices at which honey and beeswax are selling at the time of the report in the city mentioned. Unless otherwise stated, this is the price at which sales are being made by commission merchants or by producers direct to the retail merchant. When sales are made by commission merchants the usual commission (from five to ten per cent), cartage and freight will be deducted; and in addition there is often a charge for storage by the commission merchant. When sales are made by the producer direct to the retailer, commission and storage, and other charges, are eliminated. Sales made to wholesale houses are usually about ten per cent less than those to retail merchants.

EASTERN GRADING RULES FOR COMB HONEY.

FANCY.—All sections well filled, combs straight, firmly attached to all four sides, the combs unsoiled by travel-stain or otherwise, all the cells sealed except an occasional one, the outside surface of the wood well scraped of propolis.

A No. 1.—All sections well filled except the row of cells next to the wood; combs straight; one-eighth part of comb surface soiled, or the entire surface slightly soiled; the outside surface of the wood well scraped of propolis.

No. 1.—All sections well filled except the row of cells next to the wood; combs comparatively even; one-eighth part of comb surface soiled, or the entire surface slightly soiled.

No. 2.—Three-fourths of the total surface must be filled and sealed.

No. 3.—Must weigh at least half as much as a full-weight section.

In addition to this the honey is to be classified according to color, using the terms white, amber, and dark; that is, there will be "Fancy white," "No. 1 Dark," etc.

NEW COMB-HONEY GRADING-RULES ADOPTED BY THE COLORADO STATE BEE-KEEPERS' ASSOCIATION.

No. 1 **WHITE.**—Sections to be well filled and evenly capped except the outside row, next to the wood; honey white or slightly amber, comb and cappings white, and not projecting beyond the wood; wood to be well cleaned; cases of separated honey to average 21 pounds net per case of 24 sections, no section in this grade to weigh less than 13½ ounces.

Cases of half-separated honey to average not less than 22 pounds net per case of 24 sections.

Cases of unseparated honey to average not less than 23 pounds net per case of 24 sections.

No. 1 **LIGHT AMBER.**—Sections to be well filled and evenly capped, except the outside row, next to the wood; honey white or light amber; comb and cappings from white to off color, but not dark; comb not projecting beyond the wood; wood to be well cleaned.

Cases of separated honey to average 21 pounds net per case of 24 sections; no section in this grade to weigh less than 13½ ounces.

Cases of half-separated honey to average not less than 22 pounds net per case of 24 sections.

Cases of unseparated honey to average not less than 23 pounds net per case of 24 sections.

No. 2.—This includes all white honey, and amber honey not included in the above grades; sections to be fairly well filled and capped, no more than 25 un-

capped cells, exclusive of outside row, permitted in this grade, wood to be well cleaned, no section in this grade to weigh less than 12 ounces.

Cases of separated honey to average not less than 19 pounds net.

Cases of half-separated honey to average not less than 20 pounds net per case of 24 sections.

Cases of unseparated honey to average not less than 21 pounds net per case of 24 sections.

BOSTON.—We quote fancy white comb at 17 to 18; light amber, 15; amber, 14; fancy white extracted, 10 to 11; light amber, 9 to 10; amber, 9. Beeswax, 30. Boston, May 18. **BLAKE-LEE CO.**

KANSAS CITY.—There is no new comb honey on our market, and no old comb in jobbers' hands. There is a little extracted which we quote at 8 to 9. Beeswax, 25 to 28.

C. C. CLEMONS PRODUCE CO.

Kansas City, May 20.

DENVER.—We have no comb honey to quote. Our market is entirely cleaned up. Our jobbing quotations on white extracted are 9 cts.; light amber, 8; strained, 6½ to 7½. We pay 26 cts. in cash or 28 in trade for clean yellow beeswax delivered here.

THE COLORADO HONEY-PRODUCERS' ASS'N.

Denver, May 15. **F. Rauchfuss, Manager.**

INDIANAPOLIS.—White comb sells at 18 cents in ten-case lots. Amber grades are in slow demand at lower figures. Best extracted sells at 11 to 12 in five-gallon cans. Jobbing houses are well stocked, but producers are not now offering any honey. Beeswax is in good demand, and producers are being paid 31 cts. per lb.

Indianapolis, May 17.

WALTER S. POWDER.

ZANESVILLE.—The market remains quiet. The supply of honey still seems to balance the demand. Former prices are still in effect. In small lots, best grades of white comb bring 20 cts. There is practically nothing doing in extracted. Producers are offered for beeswax 29 cts. in cash or 31 in exchange for bee-supplies.

Zanesville, O., May 16.

E. W. PEIRCE.

CINCINNATI.—The market on comb honey is nearly closed up, and there is practically no demand now. Extracted honey has fallen off considerably. Fancy white table honey in 60-lb. cans brings 10 cts.; light amber in 60-lb. cans, 8; amber in barrels, 6½ to 7, according to quality. Beeswax is in fair demand at \$33.00 per 100 lbs. The above are our selling prices, not what we are paying.

Cincinnati, May 20.

C. H. W. WEBER & CO.

CHICAGO.—There is very little doing in honey of any kind at this time, and the prices are simply nominal. There are no fancy grades of comb offered. There is some No. 1 that is bringing from 15 to 16, with the dark and amber grades practically unsalable. Extracted white brings from 8 to 9; amber, 6 to 7. Beeswax is in good demand at from 30 to 32, according to color and cleanliness.

Chicago, May 17.

R. A. BURNETT & CO.

BEES REQUIRE UP-TO-DATE WORKSHOPS

MUTH'S SPECIAL and IDEAL METAL-COVERED Dovetailed Hives are bought by the practical bee-keeper. Honey-board and all regular fixtures with each hive; finest lumber and workmanship used in the manufacture of our Bee Hives. Fully illustrated in our big catalog. Send for it to-day.

"THE BUSY BEE MEN"

51 WALNUT STREET

CINCINNATI, OHIO

We Pay the Highest Cash Market Price for Honey and Beeswax Always

SPECIAL DELIVERY

During this month we shall double our usual efforts in points of delivery and service. Early indications not having been most favorable, it is possible many beekeepers will not have laid in a sufficient stock of supplies, such as sections and foundation, for the clover and basswood crop this month. We are prepared to make up for this oversight by having a large stock of both sections and foundation on hand for instant delivery. We carry nothing but the Root make, which insures the best quality of every thing. We sell at factory prices, thereby insuring a uniform rate to every one. The saving on transportation charges from Cincinnati to points south of us will mean quite an item to beekeepers in this territory. We are so located that we can make immediate shipment of any order the day it is received.

Honey and Wax

If you haven't made arrangements for the disposition of your honey and wax for this season, consult us. We buy both in large quantities, and can assure you of fair and courteous treatment, and a good price for your crop.

Shipping-cases

To sell your crop to the best advantage it must be well put up in attractive style. We have shipping cases that answer every requirement of looks and utility. Small producers who sell their crops locally will be interested in the cartons in which comb honey is put up to sell to the fancy customers at top-notch prices. We have honey-cans too, in cases for those who produce extracted honey. In fact, there isn't any thing we don't have that the beekeeper needs, either to produce his crop or help to sell it.

SAN FRANCISCO.—New comb honey is now on the market in small quantities, and is selling at 15 cts. for No. 1 grade; water-white extracted, 9 to 9½; light-amber, 8 to 8½; lower grades, 5 to 6. The demand for comb honey has been quite marked; and the new crop being now ready, the desire to place the early product is manifest. It is too early to tell how the season will be supplied, as some sections are doing nicely, while in other parts of the State it is necessary to feed the bees. Beeswax brings 27½ to 30 for light; 23 to 26 for dark.

San Francisco, May 17. J. C. FROHLIGER.

ST. LOUIS.—The honey market is unchanged. There is barely any comb honey in this market, and very little extracted. For this reason the quotations are more or less nominal. We quote fancy white comb honey at 16 to 17; No. 1 white, 15 to 16; light amber, 13 to 14; dark, 8 to 11. Broken and leaking honey sells at much less. Extracted light-amber California brings 8½ to 9; Southern light amber, 8 to 8½ in five-gallon cans; Southern in barrels and half-barrels, 7 to 7½ for light amber; dark, 6 to 6½. Beeswax, prime, brings 30 cts. per lb. Inferior and impure sells at less.

R. HARTMANN PRODUCE COMPANY.
St. Louis, May 20.

CINCINNATI.—This market is now clean and bare of comb honey, and we are pleased to note this fact for it gives the consumer an opportunity to freshen his appetite for the big fine crop that is sure to come this season. The demand for extracted honey has slackened somewhat, and we are awaiting the arrival of the new crop. We are selling amber honey in barrels at 3½ to 7½, and the finest quality at 8½ to 10, according to the quality and quantity purchased. For choice bright yellow beeswax we are paying 30 cts. per lb. in cash, delivered here, or 2 cts. per lb. more in trade. For darker grades than the above we are paying 28 to 29.

Cincinnati, May 22. THE FRED. W. MUTH CO.

NEW YORK.—Since our last, there has been no material change in the condition of the honey market. We really have nothing new to report. It is rather early as yet for the new crop from the South. It may be two weeks longer before we receive any. A few lots of comb honey are still coming in, and find ready sale at former prices. The market on extracted is very quiet, and prices have a downward tendency all along the line. The new crop from the West Indies is now arriving quite freely, and no doubt shipments will increase in quantity as the season progresses. Beeswax is steady at from 30 to 32, according to quality.

New York, May 18. HILDRETH & SEGELKEN.

LIVERPOOL.—Since we last wrote to you our market has been firm. Retail sales of Jamaican honey have been made at \$7.80 to \$8.64, and 91 barrels of West Indian sold at \$6.58 to \$7.92; \$10.08 to \$10.80 is quoted for Californian—not much doing. No sales of Chilian on spot, owing to want of stock. About 500 barrels sold for shipment to various ports at \$5.88 to \$6.12, c. i. l.; for pile No. 3, full prices. Fine white Haiti of any quality should find a good market during the next two months. Stocks of other descriptions have sold at different quotations as follows: Haitien, \$5.76 to \$7.20; Peruvian, \$3.84 to \$4.80; Chilian, \$5.52 to \$8.16; Jamaican, \$6.24 to \$7.68; Californian, \$9.60 to \$10.92. Stocks of Chilian beeswax are almost exhausted. Retail sales on spot have been made at \$38.08 to \$38.72, and for shipment at \$33.28 c. i. l., net cash, on the basis of f. a. q. Other descriptions are quoted as follows: African, \$32.16 to \$34.42; Jamaican, \$37.72; West Indies, \$32.64 to \$33.28.

Liverpool, May 1.

TAYLOR & CO.

PUBLICATIONS ON BEE CULTURE

Please use coupon below, checking the numbers of items wanted.

The pamphlets and booklets listed below are of more than ordinary interest:

- 1 **My First Season's Experience with the Honey-bee.** By the "Spectator," of the *Outlook*, of New York. A ten-page leaflet detailing the experiences of this well-known writer. You will read the leaflet through before you lay it down. Free.
- 2 **The Bee-keeper and Fruit-grower.** A 15-page booklet, giving actual facts regarding the value of bees to fruit, and showing how bee-keeping may be doubly profitable to the fruit-grower. Fruit-growers are realizing as never before the necessity of having honey-bees in close proximity to their blossoming fruit. Free.
- 3 **Bee-keeping for Sedentary Folk.** A 24-page leaflet reciting the actual experiences of an amateur bee-keeper, showing what equipment is best, points derived, etc. Free.
- 4 **Catalog of Bee-keepers' Supplies.** Our complete catalog will be mailed free to any address on request.
- 8 **Habits of the Honey-bee.** By Dr. E. F. Phillips. A somewhat scientific handling of the habits and anatomy of the bee. Price 10 cts.
- 9 **How to Keep Bees.** A book of 228 pages detailing in a most interesting manner the experience of a beginner in such a way as to help other beginners. Price \$1.00 postpaid.
- 10 **The A B C of Bee Culture.** A complete encyclopedia of bees, of 576 pages, fully illustrated, \$1.50 postpaid; half leather, \$2.
- 11 **Cleanings in Bee Culture.** A 64-page illustrated semi-monthly magazine, the leading exponent of bee culture in this country. Ten cents per issue, but to new subscribers we will furnish it six months for 25 cts.
- 12 **Back-yard Bee-keeping.** Six interesting lessons written in readable newspaper style. Many facts to encourage the "City Bound" man or woman with the back-to-the-land longing. Free.
- 15 **Truth About Sweet Clover.** Interesting booklet of nearly 100 pages. Tells of value of sweet clover for honey, for plowing under, as fertilizers of the soil, and food for horses, cattle, swine, sheep, etc. Free.

The coupon below may be used as an order sheet by properly checking the numbers of items wanted and adding your signature, and remittance, if required.

BLANKE'S BEE BOOK FREE!

A Combined Catalog
and Hand-book on
Bee Culture.

This book is more than a catalog of supplies—contains many helpful hints on bee culture. In the back is a catechism for beginners in bee culture, and even the old-timers can get much useful information out of it.

It describes our complete line of hives, supers, extractors, smokers, etc.

The book costs you nothing. Write for it. At the same time you might tell us what you are needing in bee supplies, and let us write you a special letter on the subject.

The Welcome Honey-flow...

to which you have been looking forward through the long dreary months of winter, is at last at hand. Are you ready to take full advantage of it? Unless, with wise forethought, you have already purchased the hives, sections, foundation, or other supplies, you will probably require, it is high time that your wants crystallize into an order. Forecasts are at best uncertain, but present indications are for a good honey-flow, and its value to you will depend upon the degree of preparation you have made for it. There is yet just time to secure the necessary supplies and properly arrange your equipment. Longer delay may mean regrettable loss.

The following letter will give you a tip as to where you can secure best goods, best treatment, and most prompt delivery.

Mr. E. W. Peirce,
Zanesville, Ohio.

The bee-supplies were received March 4th. The February cash discount was received also. Many thanks for promptness and kind treatment.

Yours truly,
FRED BAILEY.

Thornton, W. Va.

Mr. Bailey is but one of hundreds of beekeepers who find in ROOT QUALITY—PEIRCE SERVICE absolute satisfaction. If you are not already of this number, you will be eventually.

A postal card addressed as below will bring you a large illustrated catalog.

192 Friend Street BOSTON, MASS.

Protection Hive

The best and lowest priced double-wall hive on the market. This hive has 14 materials in the water wall, and is too cheaply made. Material as are some other hives on the market. Now for direct shipping and direct shipping. It will give you the best.

Bingham Smokers

BINGHAM SELF-CLEANING BEE SMOKE

Inset on "Old Reliable" Bingham Smokers, for sale by all dealers in beekeepers' supplies. For over 20 years the standard in the country. The smoker will give a fine smoke in the smoke, direct from the smoker, direct from the smoker, direct from the smoker, and so on. Smoker engine 4-inch each, \$3.00; 5-inch, \$3.50. Smoker engine, each, \$2.00; 5-inch, \$2.50. Smoker engine, 4-inch, each, \$1.50; 5-inch, \$2.00. Little wonder, 4-inch, each, \$1.00; 5-inch, \$1.50. Smoker engine, 4-inch, each, \$1.00; 5-inch, \$1.50. Manufactured by H. H. JEPSON.

A. G. WOODMAN CO., Grand Rapids, Mich.

"If goods are wanted quick, send to Pouder."

(Twenty-third year.)

In the Long Run

When Bee-Supplies are required it will pay IN THE LONG RUN to send where the finest and most accurate goods are handled. It will also pay IN THE LONG RUN to order from some house that specializes on prompt and accurate shipments. My stock of foundation and sections are fresh from factory, and are in much demand at present. The new double-walled Buckeye hive is here, made up or in the flat, and your ready-built combs in Hoffman frames will fit this hive. I have a booklet about this hive which I supply free and it is interesting.

Many inquiries are coming in about exchanging beeswax for supplies, and to all such I wish to say that the arrangement is entirely satisfactory, and I will allow highest quotations for wax and you will find me prompt with returns. Small shipments of wax should be sent by express, but not necessary to prepay—charges can be deducted from value of wax as well.

My new illustrated catalog free for the asking.

WALTER S. POWDER, Indianapolis, Ind.

Root's Section-Honey Boxes!

THERE have been very few years when the outlook for a bumper honey crop has been brighter than it is now—at the opening of the season of 1912. Every indication points to an almost unprecedented honey-flow, and the bee-keeper who is not making most complete preparations to reap the harvest will not be very well satisfied with himself when the surplus has all been taken off this fall, or when he knows a big flow is on and he has no sections to put on his hives.

Of course the section problem is the most important one to the comb-honey man, and it MUST be solved right. Therefore why take risks? Why run the slightest chance of getting sections of uncertain quality, or experimenting at a price you can not afford to pay? We are the largest manufacturers of Section-honey Boxes in the world—naturally we have the finest equipment for section-making, and cut up the best lumber. We are in close touch with every phase of bee-keeping—with every department of the honey trade—therefore we know the service sections are required to give, and we make ROOT'S SECTION-HONEY BOXES to meet these requirements. Years of experience and satisfied section patrons throughout the world ought to count; and you, Mr. BEEKEEPER, if you will buy ROOT'S SECTIONS, will understand why.

PRICE LIST OF SECTIONS

4¼x4¼ Beeway Sections—2 inch, 1½, 1¾, 1¾, or 7 to foot wide.

We send 1½ style 2 beeway when your order does not specify style or width wanted.

10 | Advanced Bee Culture..... 1 00

| Fifty Years Among the Bees. New edition. 1 00
By Dr. C. C. Miller. Dr. Miller is too well known among the bee-keeping fraternity to need any introduction. His book is charmingly written, and covers his experience in detail.

15 | Cook's Manual, cloth..... 1 00

5 | Doolittle on Queen-rearing..... 95

15 | Langstroth on the Honey Bee, Revised edition..... 1 10

10 | Quinby's New Bee-keeping..... 90

5 | British Bee-keeper's Guide-book, by Thomas William Cowan, England..... 95

5 | The Honey-bee, by Thos. William Cowan..... 95

10 | How to Keep Bees..... 90

15 | Modern Bee-farm. By S. Simmins. New edition: cloth bound..... 1 85

| Wax Craft, Cowan..... 1 00

POPULAR BOOKS ON BEE CULTURE.

11 | The Bee People, Margaret W. Morley..... 1 40

11 | The Honey-makers, Margaret W. Morley..... 1 40

11 | Life of the Bee, Maeterlinck..... 1 30

11 | The Swarm, Maeterlinck..... 1 20

7 | The Bee-master of Warilow, Edwards..... 50

10 | Lore of the Honey-bee..... 1 90

| Alexander's Writings on Practical Bee Culture. By the late E. W. Alexander, who conducted the largest apiary in the United States. A wonderfully interesting discussion of bee-keeping in its broadest phases. Any one can understand it; 35 chapters, 95 pages. Paper bound, 50 cts. postpaid.

| A Year's Work in an Out-apiary..... By G. M. Doolittle. Packed full of most valuable information ever given to bee-keepers. A practical and interesting book by a very successful apiarist. Sale has reached nearly 5000 copies; 60 pages, paper bound; 50 cts. postpaid.

| The Townsend Bee Book..... By E. D. Townsend. Written by one of the most progressive, successful, and extensive bee-keepers in the U. S., this book has been in great demand from the day of its announcement. Tells how to make a start with bees, and will greatly benefit beginners and experienced bee-keepers; 90 pages, paper bound, 50 cts. postpaid.

| Bee-keeping by Twentieth-century Methods, by J. E. Hand..... 50

The author shows not only how to control swarming, but how to treat foul brood without shaking, and discusses in a comprehensive way many other down-to-date apicultural problems and their solutions.

In combination with Gleanings in Bee Culture for one year any one of these books may be had for the price of Gleanings alone, \$1. Foreign postage 60 cts. extra. Canadian postage 30 cts. extra.

MISCELLANEOUS HAND-BOOKS.

5 | A B C of Carp Culture, by Geo. Finley..... 25

7 | A B C of Potato Culture, Terry** New edition, revised & enlarged; paper, 50c; cloth, 75c, mail \$5c. This is T. B. Terry's first and most masterly work.

It has really made a revolution in potato-growing, and has been reprinted in several foreign languages. By getting the ground in proper condition to grow great crops of clover, and turning this under, Terry succeeded, not only in getting more potatoes, but even better ones, and in producing them at less expense also, than by any plan or system be-

Postage.]

[Price without postage.

fore the time he began his experiments in 1885. The book has already passed through three editions of many thousands. It not only includes potato-growing in the United States, but in Bermuda, the Island of Jersey, and other warmer parts of the world where "new potatoes" are raised for the express purpose of getting the high prices in the cities during January, February, and March. The book also gives special attention to the different and best methods for preserving and keeping seed potatoes in the very best condition to plant in all these different localities.

5 | A B C of Strawberry Culture,** by T. B. Terry.. New edition, revised and enlarged; paper, 45c; cloth, 68c; by mail, 75c.

After Terry's potato-book had obtained such a kind reception from farmers, market-gardeners, and others, he was induced to give his plan of growing strawberries, as he did potatoes, by plowing under great crops of clover, and, like the potato-book, his writings gave a new impetus to strawberry-growing: in fact, some of his pupils declare that, aside from the picking, they can grow strawberries almost as cheaply per bushel as potatoes. By following Terry's teachings, thousands of people have not only been able to give their families but the whole wide world better strawberries, and more of them, than they ever saw before.

6 | Asparagus Culture..... 40

6 | Alfalfa Culture..... 40

8 | Barn Plans and Out-buildings*..... 90

2 | Celery for Profit, by T. Greiner**..... 25

The first really full and complete book on celery culture, at a moderate price, that we have had. It is full of pictures, and the whole thing is made so plain that a schoolboy ought to be able to grow paying crops at once without any assistance except from the book.

10 | Fruit Harvesting, Storing, Marketing, etc..... 75

It has been well said that it is an easier matter to grow stuff than to sell it at a proper price after it is grown; and many men fail, not because they are inexperienced in getting a crop, but because they do not know how to sell their crops to the best advantage. This is the first book of the kind we have had as an aid in selling. It not only tells all about picking, storing, and packing, but gives all the best methods for storing for one or two days or a longer time. It also tells about evaporating and canning when there is a glut in the market. It discusses fruit packages and commission dealers, and even takes in cold storage. It is a new book of 250 pages, full of illustrations. Publisher's price, \$1.00.

| Farming with Green Manures, postpaid**..... 90

This book was written several years ago; but since competent labor has got to be so expensive, and hard to get, many farmers are beginning to find they can turn under various green crops cheaper than to buy stable manure, and haul and spread it—cheaper, in fact, than they can buy fertilizers. This book mentions almost all plants used for plowing under, and gives the value compared with stable manure. Some of the claims seem extravagant, but we are at present getting good crops, and keeping up the fertility, by a similar treatment, on our ten-acre farm.

7 | Farm, Gardening, and Seed-growing**..... 90

10 | Fuller's Grape Culturist*..... 1 15

5 | Garden and Farm Topics, Henderson**..... 60

12 | Gardening for Pleasure, Henderson*..... 1 10

While "Gardening for Profit" is written with a view of making gardening PAY, it touches a good deal on the pleasure part, and "Gardening for Pleasure" takes up this matter of beautifying your home and improving your grounds, without the special point in view of making money out of it. I think most of you will need this if you get "Gardening for Profit." This work has 246 pages and 134 illustrations. (Retail price \$2.00.)

12 | Gardening for Profit**..... 1 10

This is a late revision of Peter Henderson's celebrated work. Nothing that has ever before been put in print has done so much toward making market-gardening a science and a fascinating industry. Peter Henderson stands at the head, without question, although we have many other books on these rural employments. If you can get but one book, let it be the above. It has 376 pages and 138 cuts. (Retail price \$2.00.)

8 | Gardening for Young and Old, Harris**..... 90

This is Joseph Harris' best and happiest effort. Although it goes over the same ground occupied by Peter

Postage.]**[Price without postage.**

Henderson, it particularly emphasizes thorough cultivation of the soil in preparing your ground; and this matter of adapting it to young people as well as old is brought out in a most happy vein. If your children have any sort of fancy for gardening it will pay you to make them a present of this book. It has 187 pages and 46 engravings.

3 | Grasses and Clovers, with Notes on Forage

Plants..... 20
This is by Henry A. Dreer, author of the book "Vegetables Under Glass" that has had such a large sale of late. This little book tells how six tons of grass has been grown to the acre, and gives much other valuable matter.

10 | Greenhouse Construction, by Prof. Taft .. 1 15**

This book is of recent publication, and is as full and complete in regard to the building of all glass structures as is the next book in regard to their management. Any one who builds even a small structure for plant-growing under glass will save the value of the book by reading it carefully.

12 | Greenhouse Management, by Prof. Taft.....1 15**

This book is a companion to Greenhouse Construction. It is clear up to the times, contains 400 pages and a great lot of beautiful half-tone engravings. A large part of it is devoted to growing vegetables under glass, especially Grand Rapids lettuce, as well as fruits and flowers. The publisher's price is \$1.50; but as we bought quite a lot of them we can make a special price as above.

5 | Gregory on Cabbages, paper* 20**5 | Gregory on Squashes, paper*..... 20****5 | Gregory on Onions, paper*..... 20**

The above three books, by our friend Gregory, are all valuable. The book on squashes especially is good reading for almost anybody, whether they raise squashes or not. It strikes at the very foundation of success in almost any kind of business.

| Handbook for Lumbermen..... 05**5 | Home Pork-making; 125 pages, illustrated..... 40**

I think it will pay well for everybody who keeps a pig to have this book. It tells all about the care of the pig, with lots of pictures describing cheapens, appliances, all about butchering, the latest and most approved short cuts; all about making the pickle, barreling the meat, fixing a smoke-house (from the cheapest barrel up to the most approved arrangement); all about pig-troughs; how to keep them clean with little labor; recipes for cooking pork in every imaginable way, etc. Publisher's price is 50 cents, ours as above.

15 | How to Make the Garden Pay.....1 35**

By T. Greiner. Those who are interested in hot-beds, cold-frames, cold green-houses, hothouses, or glass structures of any kind for the growth of plants, can not afford to be without the book. Publisher's price \$2.00.

10 | How to Keep Well and Live Long 90

The above book by T. B. Terry is, in my opinion, destined to relieve more pain, sickness, and death than any other book in the whole world that has ever come to my knowledge. This is pretty strong language, I admit; but since Mr. Terry commenced, years ago, to urge the importance of pure air, pure water, and a simple diet of good simple food in moderate quantities, the whole wide world, doctors included, seems to be gradually falling in with him. Of course, other good and wise men commenced a similar crusade for better health long before Terry did; but he seems to have a happy faculty of getting hold of people and keeping their attention. After you once start in with the book you will be pretty sure to read it to the end, and you will ever after be a better and a happier man or woman for having read it. We have a special low price for clubbing with GLEANINGS—that is, both for \$1.50. If you have already paid for GLEANINGS a year or more in advance you can have the book for 75 cents postpaid. Since it first came out, only a short time ago, we have sold nearly 1000 copies.

3 | Maple Sugar and the Sugar-bush..... 25****5 | Manures; How to Make and How to Use**

Them; in paper covers..... 30

6 | The same in cloth covers..... 65**2 | Nut Culturist, postpaid.....1 25****3 | Onions for Profit**..... 40**

Fully up to the times, and includes both the old onion culture and the new method. The book is fully illustrated, and written with all the enthusiasm and Even if one is not particularly interested in the busi-

Postage.]**[Price without postage**

ness, almost any person who picks up Greiner's books will like to read them through.

8 | Practical Floriculture, Henderson.*.....1 10**10 | Small-Fruit Culturist, Fuller 75****2 | Experiments in Farming, By Waldo F. Brown. 08**

This little book ought to be worth its cost for what is said on each of the four different subjects; and the chapter on cement floors may be worth many dollars to anybody who has to use cement for floors, walks, or any thing else. In fact, if you follow the exceedingly plain directions you may save several dollars on one single job; and not only that, get a better cement floor than the average mason will make.

10 | Our Farming, by T. B. Terry 75**

Same, paper cover, postpaid..... 50

In which he tells "how we have made a run-down farm bring both profit and pleasure."

If ordered by express or freight with other goods, 10c less.

10 | Talks on Manures*1 35

By Joseph Harris. Written conversational style, which makes it very interesting reading. It covers the subject very completely; contains numerous analyses of manures and comparative tables. The use of technical language is avoided, which makes the book of greatest value to the practical farmer. A book of 366 pages, nicely bound in cloth.

10 | The Dollar Hen..... 90

The above book will be clubbed with GLEANINGS for one year at \$1.50; or if you have already subscribed a year or more in advance you can have the book post-paid for 75 cents.

My opinion is, that "The Dollar Hen" is not only one of the best books on poultry that we have at the present time, but it is worth nearly as much as a dozen other books. Perhaps this is extreme, but we have very few books that are strictly up-to-date, and still fewer that pitch right into the superstitions and humbugs now scattered all through our poultry books and journals.

5 | The New Rhubarb Culture..... 40**

Whenever apples are worth a dollar a bushel or more, winter-grown rhubarb should pay big. It does not require an expensive house nor costly appliances. Any sort of cellar where it will not freeze is all right for it; and the small amount of heat necessary to force the rhubarb costs very little. The book is nicely bound in cloth, full of illustrations, mostly photos from real work, 130 pages. Every market-gardener should have this book, for the lessons taught indirectly, in regard to forcing other crops besides rhubarb. Publisher's price 50c.

5 | Tile Drainage, by W. I. Chamberlain..... 35

Fully illustrated, containing every thing of importance clear up to the present date.

The single chapter on digging ditches, with the illustrations given by Prof. Chamberlain, should alone make the book worth what it costs, to every one who has occasion to lay ten rods or more of tile. There is as much science in digging as in doing almost any thing else; and by following the plan directed in the book, one man will often do as much as two men without this knowledge.

5 | Tomato Culture 35

In three parts. Part first.—By J. W. Day, of Crystal Springs, Miss., treats of tomato culture in the South, with some remarks by A. I. Root, adapting it to the North. Part second.—By D. Cummins, of Conneaut, O., treats of tomato culture especially for canning-factories. Part third.—By A. I. Root, treats of plant-growing for market, and high-pressure gardening in general.

5 | Winter Care of Horses and Cattle..... 25

This is friend Terry's second book in regard to farm matters; but it is so intimately connected with his potato-book that it reads almost like a sequel to it. If you have only a horse or a cow, I think it will pay you to invest in a book. It has 44 pages and 4 cuts.

8 | What to Do, and How to be Happy while Do-

ing It..... 65

The above book, by A. I. Root, is a compilation of papers published in *Gleanings in Bee Culture*, in 1886, '7, and '8. It is intended to solve the problem of finding occupation for those scattered over our land out of employment. The suggestions are principally about finding employment about your own homes. The book is mainly upon market-gardening, fruit-culture, poultry-raising, etc. Illustrated, 188 pages, cloth

8 | Same, paper covers..... 40

THE A. I. ROOT CO., Medina, Ohio.

Classified Advertisements

\$1.00 each; 3 for \$2.75; 6 or more, 85 cts. each. Un-
tested, one, 75 cts.; 3, \$2.00; 6 or more, 65 cts. each.
There is no disease here. Bees, per lb., \$1.00; nu-
clei, per frame, \$1.25. C. B. BANKSTON,
Buffalo, Leon Co., Texas.

Goldens that are golden. Queens that produce
golden-to-tip workers, hardy, and honey-getters; a
race of bees that has taken 15 years to produce,
and will please all who try it; have had as high as
300 lbs. surplus to hive in one season. Will replace
all mated \$1.50 queens. Pure matings guaran-
teed. Queens, \$1.00 to \$2.00. Send for booklet.

I am booked full on golden queen orders until
June 15, 1912
GEO. M. STEELE, 30 South 40th St., Philadelphia, Pa.

\$500 worth of nuclei or more. If you want the
lot, come with the cash and help prepare them to
ship. Sealed brood, \$1.00 per frame; honey-frames,
50 cts. per frame. Queens, 1 year old, 50 cts. to \$1.00
each—your choice. I will furnish 50 chaff hives,
single-walled hives, or five-frame nuclei for the
lot to ship them in.

MRS. S. WILBER FREY, Sand Lake, Mich.

FOR SALE.—Italian queens, bred from the best
honey-gathering strains obtainable. Untested, 75
cts.; select, \$1.00; tested, \$1.25; select tested, \$1.50.
Nuclei without queen, one-frame, \$1.50; two-frame,
\$2.00; three-frame, \$2.75. For queens and nuclei in
quantity lots, and bees by the pound, write for
prices and circular.

ROBT. B. SPICER, Wharton, N. J.

Our golden Italian queens produce the brightest
and gentlest golden bees that we ever had; great
honey-gatherers, and not bad robbers. Our three-
band are the best of their kind. Price of either,
untested, \$1.00; tested, \$2.00; breeders, \$3.00. We
will make a very low price later in the season.

C. W. PHELPS & SON,
Dealers in beekeepers' supplies, Binghamton, N. Y.

FOR SALE.—North Carolina-bred Italian queens,
bred for business; none better for honey-gathering;
good recommendations coming in almost every
day. I have Root's and Moore's strain, Davis',
Quirin's, Laws', and choice imported breeders, to
get my fine honey-gathering strain from. I breed
all queens in full two-story colonies running over
with bees at all times. I do not keep any thing but
the red-clover and the goldens in my yards. Try
them and see for yourself. Untested, 75 cts.; doz.,
\$7.00; tested, \$1.25; select tested, \$1.50; extra select
tested, \$2.00; select breeders, \$3.00; extra select, \$5.
H. B. MURRAY, Liberty, N. C.

Position Wanted

Man of intelligence, and steady, 35, now on lemon-ranch, desires position with chance to handle bees. E. BISHOFF, Rt. 1, Box 224, San Diego, Cal.

Secretary—E. B. Tyrell, Detroit, Mich.
Treasurer—N. E. France, Platteville, Wis.

Directors

E. D. Townsend, Chairman, Remus, Mich.
Wesley C. Foster, Boulder, Colo.
Franklin Wilcox, Mauston, Wis.
J. E. Crane, Middlebury, Vermont.
J. M. Buchanan, Franklin, Tenn.

Annual Membership dues \$1.50, one-third (50 cents) of which goes to the local branch where such branch is organized.

Send dues to the Secretary, E. B. Tyrell.

Special Notices

By OUR BUSINESS MANAGER

Our Philadelphia manager, Mr. Wm. A. Selser, expects to continue lectures on beekeeping again this year on our roof at 10 Vine Street, Philadelphia, Pa., during May and June, every Tuesday and Friday, between 11 and 12 o'clock. Visitors desiring to see the actual work with the bees, and the various manipulations of the hives, will be welcome at these demonstrations. Of course, visitors are welcome at our store during all business hours, but for lectures and demonstration work are invited particularly at the hours named.

BEESWAX LOWER.

Because of the heavy winter loss of bees there is an increasing lot of beeswax being offered, as well as a restricted demand for foundation. We have a large supply on hand which should supply our needs for the rest of this season. We quote for shipments after this date 28 cts. cash or 30 in trade, delivered here or at our branch stores.

SECOND-HAND CANS.

Just after going to press with our last issue we received an order for a carload of second-hand cans which have been shipped to California. We still have several hundred cases, but not enough for another carload as yet. We shall be pleased to receive orders for what stock we have, as long as it lasts—\$3.00 for 10 cases; 25 cases or more, 25 cts. per case of two cans.

JONES PATTERN UNCAPPING-KNIVES.

We have finally secured a sample lot of three dozen Jones pattern honey-knives with blade 1½ in. wide across the face, and two wide bevels meeting on the opposite side. There are those who consider this style of blade superior to the Bingham. We can furnish these, while they last, at \$1.00 each, and would like to get them out for trial this season so as to determine whether they are worthy of a place in our catalog for next season.

Special Notices

By A. I. Root

"HOW TO TELL THE STORY OF LIFE."

The above is the title of a book of a little more than 50 pages, by Professor T. W. Shannon, of Fredricktown, Mo. Professor Shannon has not only written several books, some of which have been reviewed in these columns already, but he is traveling and giving lectures on this particular matter of educating our children in regard to sexual matters before they have a chance to have their minds poisoned along this very line by vicious associates. May God strengthen our good brother that he may long continue in the good work that he is doing for the children of our nation just as they are budding into manhood and womanhood. Now, in addition to the excellent teaching of this book I would suggest that an *incubator* is the best object-lesson in the world for the children. With white-shelled eggs, a magnifying-glass, and a good egg-tester, such as I have described, the germ of the chick will be visible in the egg at the end of two days; and the growth is plainly visible every night and morning from that time on. The children, with their sharp eyes, will hardly need a glass or strong spectacles, such as I use; and the growth is so rapid they can easily see the change between night and morning and morning and night. Now, it is an easy matter to explain, after they have witnessed these wonderful developments, that humanity comes into being in much the same way—the commencement is microscopic. In a few days the beating of the little heart can be plainly seen; the growth of the circulatory system, and finally the motion of the chick as it begins to find out it has legs and wings. Explain to the children the consequences of rough handling or lack of heat at this delicate stage. From this the transition is easy to explain to them

how boys and girls are crippled or ruined for life, or sent to the insane or idiotic asylum just because of improper meddling at a critical time with God's sacred and delicate handiwork. This book will be mailed to any address for 15 cents.

BASSWOOD TREES FOR HONEY, LUMBER, SHADE, AND OTHER PURPOSES.

Toward forty years ago I decided that basswood or linden yielded *more* honey in a short space of time than any other tree or plant known. This basswood honey is almost as light in color as any other known. Perhaps the California water-white sage would be ahead in that respect. But where well ripened, it is so thick that you can turn over a saucerful of it in average weather without having it spill. When thoroughly ripened like this, most people consider it equal to the best grades of white-clover honey, if not superior to them. Of course, raw unripened basswood honey, with its strong aromatic flavor, is seldom liked by anybody. It can, however, be ripened artificially, either by the sun evaporators or properly constructed ovens, so as to be almost if not quite equal to that ripened on the hive. Well, as a matter of course, after GLEANINGS has been teaching this, year after year, there has been a corresponding demand for basswood trees for shade in our towns and cities, and for lumber where timber is grown. I think it was more than forty years ago that I sold several thousand basswoods to be planted in the city of Dayton. Many of them are now of large size. Until quite recently we have been sending our basswood trees, both in the fall and spring, by mail and express, handling many thousands of them yearly. Since the writer has been getting well along in years, and our manufacturing industry has assumed such large proportions, there has not seemed to be anybody here in Medina to keep up growing basswoods from the seeds and caring for them in the nursery; and I have several times mentioned the fact that there is a good opening for some beekeeper who has the land, and is located conveniently for a mail and express business. By the way, I have frequently had seedlings that came up in the spring grow three feet the first season, and such trees sold readily and rapidly for eight or ten cents each, depending on the number ordered. Of course, most of our nurserymen offer basswood or linden trees; but they generally want from 25 cts. to \$1.00 apiece, which beekeepers can not afford to pay.

Now I am pleased to note that a great nursery firm located at South Framingham, Mass., near Boston, on a place known as the "Little Tree Farms," and doing business under the name of the American Forestry Co., is growing basswoods not only by the hundreds and thousands, but by the hundreds of thousands; and their prices for quantities are quite similar to what we used to offer. For instance, seedlings by the thousand, 6 to 12 inches high, are offered as low as \$1.25 per 100; for transplanted trees, 2 to 3 feet high, only \$5.00 per 100. Of course, if you make small orders, say for 5, 10, or 25 trees, you would have to pay a comparatively larger price. They have the American basswood, the large-leaved European linden, and the small-leaved European; and, what seems to be a little singular, the European lindens are even *cheaper* than the American.

By the way, we have always been in the habit of using the words "basswood" and "linden" interchangeably; but this firm calls the American tree a "basswood," while the foreign trees are called "linden." I can not tell which of the two yields the more honey, if there is any difference in this respect. We have both kinds growing on our place here, and one would hardly notice the difference unless his attention were called to it. It seems as if it would be a splendid thing for beekeepers to buy a lot of the little seedlings at \$1.25 per 100 or \$8.00 per 1000, and transplant them into very rich garden soil. Then they can be moved to their permanent place, say when they are from 5 to 10 feet high. In this way the postage or express charges would be comparatively light.

I know I am giving this firm a pretty good write-up; but when you see the literature they send out with their catalog I think you will decide with me that their literature is educational. I did not know before that there was an institution in the world that was doing so much in the way of growing forest trees of every description. They also furnish seeds of the different basswoods.

Requeen your bees this season, and get the best results from your bees. Our strain of Italians, either three-banded or golden, will make a marked improvement apparent in your bees, and increase your honey profits. We can furnish queens promptly at the following prices:

.90 for untested;
\$1.00 for tested;
\$1.50 for select tested;
\$5.00 for the best breeding queens.

Full colonies of bees in new ten-frame 1½-story Root hives for \$10.00, f. o. b. Beeville.

Even though the season is somewhat advanced, we have been keeping our stocks of supplies right up, and you will find us ready to make immediate shipment of any thing needed in the line of hives, frames, foundation, sections, extractors, cans, shipping cases—in fact, a complete line of Root's goods as listed in their catalog and ours, the only difference being that the southern buyer has the benefit of our stock, ability to handle orders promptly, and the saving on transportation charges. We sell goods in original factory packages, whether you buy in large quantities or in single lots.

Our stock of cans and shipping cases is more complete than ever, and we can guarantee satisfaction with anything along this line. Honey attractively put up is half sold, and it pay you to try our packages this season.

Orders mailed to us will have the same personal attention that you would have should you visit us.

TOEPPERWEIN & MAYFIELD

Corner Nolan & Cherry Streets
SAN ANTONIO, TEXAS

The untimely death on May 30, 1911, of Mr. W. Z. Hutchinson, author of

Advanced Bee Culture

marked the passing of one of the most brilliant writers who have ever championed the cause of the honey-bee. . . . Perhaps no better tribute to this talented man could be given than that contained in the following paragraph from a testimonial article on MR. HUTCHINSON'S life by Prof. A. J. Cook, in GLEANINGS:

"No one could know him and his work without convincing proof that he stood in the very front ranks of our bee-keeping fraternity. His quick intellect, coupled with his close attention to details, won for him, at the very start, phenomenal success as a queen-breeder. To this, apiculture owes its great good fortune in securing his life-long service in its development. He was temperamentally exact and methodical, transparently honest, and if I were to select one word to characterize our brother it would be genuineness. He was delightfully companionable, and always alert for any new idea or suggestion touching the interests of the work, to which he was so entirely devoted. His quick apprehension and terse clear-cut style as a writer, made him a most reliable exponent of all that was latest and best in the theory and practice of his beloved art."

Nearly 500 Subjects Pertinent to Modern Bee-keeping are Authoritatively Discussed

ADVANCED BEE CULTURE is a beautifully printed book. Best plate paper has been used throughout its 200 pages, with the result that the many fine illustrations are unusually clear in every detail. Bound in attractive and substantial cloth. A volume whose appearance and unquestionable worth justify entitle it to a place in the library of every bee-keeper. No more important work on this fascinating subject has recently appeared.

Most fortunate for all bee-keepers is the fact that Mr. Hutchinson's life was spared just beyond the point when he had completed his reading and correction of the editorial proofs of the new edition of ADVANCED BEE CULTURE. Only a few short days after an editorial by Mr. E. R. Root, editor of GLEANINGS IN BEE CULTURE, who revised Mr. Hutchinson's book, had appeared, the call came, and this sterling, upright man, whom everybody loved, was taken home. Read what Mr. Root has to say of Mr. Hutchinson's book:

As a writer on bees Mr. Hutchinson has few equals. For clearness of style and accuracy of judgment he is second to none. His enthusiasm shines forth on every page. His selection of the new and the useful from an extended discussion is intuitive. The last edition of "Advanced Bee Culture," as well as the new edition before, is made up of the best ideas of our best experts, properly classified and condensed by a master of the art of boiling down discussions. I do not hesitate to say that this is one of the most valuable books on bees that was ever put out; and while its title would indicate that it is designed only for the advanced bee-keeper, yet I am sure that a large number of beginners in the business will find it exceedingly helpful and interesting, especially if they will take it in connection with some other work like the "A B C and X Y Z of Bee Culture," or any text-book designed especially for the beginner class.

\$1.50 Buys a Two-dollar Value

ADVANCED BEE CULTURE costs \$1.00 per copy. GLEANINGS IN BEE CULTURE (semi-monthly)—known and read by bee-keepers throughout the world—\$1.00 for an annual subscription. It is our pleasure, however, to offer this interesting and most useful combination—the book here described, and GLEANINGS one year, both for \$1.50. It is a value you will very seldom find—really it is a good \$2.00 worth for \$1.50.

Foreign postage, 80 cents extra; Canadian postage, 30 cents extra.

Printype — OLIVER Typewriter

The Only Writing Machine in the World
that Successfully TYPEWRITES PRINT

--17 Cents a Day!

The Printype Oliver Typewriter, which has crowded ten years of typewriter progress into the space of *months*, is now offered to the public for *17 Cents a Day!*

—Offered at the same price as an ordinary typewriter—*payable in pennies!*

The commanding importance of *Printype* is everywhere conceded.

For who does not see what it means to make the world's vast volume of type-written matter as *readable as books or magazines!* The Printype Oliver Typewriter is equipped with beautiful Book Type, such as is used on the world's *printing presses*.

Printype is distinguished by marvelous clearness and beauty. It does away with all strain on eyesight which the old-style *outline* type imposes. Printype puts life and style and *character* into typewritten correspondence. It makes every letter, every numeral, every character, "*as plain as print.*"

The complete story of *Printype* has never before been told. Here it is:

The Real Story of Printype

The idea from which "Printype" sprung resulted from the success of our type experts in equipping a typewriter used in our offices to write "The Oliver Typewriter" in our famous trade-mark

type just as the name appears on the outside of the machines and in all Oliver publicity.

The beautiful appearance and the marvelous clearness of the reproduction of our "ebony" trade-mark type, disclosed the possibilities of equipping The Oliver Typewriter to *write the entire English language in shaded letters!*

We worked for *years* on the plan and finally succeeded in producing, for exclusive use on The Oliver Typewriter, the wonderful shaded letters and numerals known to the world as "Printype."

The Public's Verdict

That the public is overwhelmingly in favor of Printype is impressively shown by this fact:

Already over 75 per cent of our entire output of Oliver Typewriters are "Printypes."

The public is *demanding* Printype in preference to the old-style type.

Within a year, at the present rate, *90 per cent of our total sales will be "Printypes."*

Thus the Oliver Typewriter, which first successfully introduced *visible writing*, is again to the fore with another revolutionary improvement — *Printype, the type that prints print!*

To Corporations: The Oliver Typewriter is used extensively by great concerns in all sections of the world. Our "17-Cents-a-Day" Plan is designed to help that large class of typewriter buyers who want the same typewriter that serves the great corporations, but prefer the easy system of purchase.

The masses want The Oliver Typewriter because it stands the test of the largest corporations.

Meet "Printype"—You'll Like Its Looks

Ask for Specimen Letter and "17-Cents-a-Day" Plan.

Make the acquaintance of Printype, the reigning favorite of typewriter-dom. Ask for a letter written on The Printype Oliver Typewriter, which will introduce you to this beautiful new type. We will also be pleased to forward the "17-Cents-a-Day" Plan on request. Address Sales Department,

The OLIVER Typewriter Company

116 Prospect St., Cleveland, O.

Gleanings in Bee Culture

LIBRARY
MUSEUM

VOL. XL. JUNE 15, 1912, NO. 12.

DOUBLE-WALLED OR BUCKEYE HIVE OUT- FIT NO. 6.

The double-walled hives suggested in this outfit are adapted for outdoor wintering, relieving the bee-keeper of the work of preparing the hives for winter; and for those who want to keep bees for pleasure as well as profit, we recommend this outfit most highly.

Following is a list of articles included in the above outfit, numbered to correspond:

No. 1—Full Colony of Bees in Ten-frame double-walled Buckeye Hive, Complete with 28 Sections	14.50
1 Tested Italian Queen for Above	3.00
No. 2—Empty Hive Complete for Hiving New Swarm	5.95
No. 2A—Two Extra Comb-honey Supers	2.10
No. 3—One Year's Subscription to Gleanings in Bee Culture (large semi-monthly, illus.)	1.00
No. 4—Standard Root Smoker	.85
No. 5—A B C of Bee Culture	\$1.50
No. 6—Pair of Bee-gloves	.50
No. 7—No. 2 Bee-veil	.60

No. 8—Shows two brood-frames with full sheets of foundation, from which the bees build honey-comb. There are ten of such frames in each of the hives. No 9 is a super-cover. No. 10 is a tray which is filled with chaff or other packing material to afford protection in winter. No. 11 is the hive cover or roof which telescopes the hive-body as shown in No. 1.

SPECIAL OFFER { Delivered at any express office in U. S. east of Mississippi River and north of Ohio River. (Bees can not be safely shipped till after May 1st.) **\$30.00**

For delivery to points outside of above free limit, we will make terms on application.

The investment here is a little more than for some of the other outfits we furnish; but if you expect to keep a few bees only, just for recreation or to make enough honey for your own table, you will not need to make any further purchases for some time, except a few extra sections the second season.

The A. I. Root Company, Medina, Ohio

Enclosed find draft for \$30.00, for which please send me Outfit No. 6, as listed above. I understand that you guarantee safe arrival and prepay all charges, if north of Ohio River and east of Mississippi River.

HONEY MARKETS

The prices listed below are intended to represent, as nearly as possible, the average market prices at which honey and beeswax are selling at the time of the report in the city mentioned. Unless otherwise stated, this is the price at which sales are being made by commission merchants or by producers direct to the retail merchant. When sales are made by commission merchants the usual commission (from five to ten per cent), cartage, and freight will be deducted; and in addition there is often a charge for storage by the commission merchant. When sales are made by the producer direct to the retailer, commission and storage, and other charges, are eliminated. Sales made to wholesale houses are usually about ten per cent less than those to retail merchants.

EASTERN GRADING RULES FOR COMB HONEY.

FANCY.—All sections well filled, combs straight, firmly attached to all four sides, the combs unsoiled by travel-stain or otherwise, all the cells sealed except an occasional one, the outside surface of the wood well scraped of propolis.

A No. 1.—All sections well filled except the row of cells next to the wood; combs straight; one-eighth part of comb surface soiled, or the entire surface slightly soiled; the outside surface of the wood well scraped of propolis.

No. 1.—All sections well filled except the row of cells next to the wood; combs comparatively even; one-eighth part of comb surface soiled, or the entire surface slightly soiled.

No. 2.—Three-fourths of the total surface must be filled and sealed.

No. 3.—Must weigh at least half as much as a full-weight section.

In addition to this the honey is to be classified according to color, using the terms white, amber, and dark; that is, there will be "Fancy white," "No. 1 Dark," etc.

NEW COMB-HONEY GRADING-RULES ADOPTED BY THE COLORADO STATE BEEKEEPERS' ASSOCIATION.

No. 1 WHITE.—Sections to be well filled and evenly capped except the outside row, next to the wood; honey white or slightly amber, comb and cappings white, and not projecting beyond the wood; wood to be well cleaned; cases of separated honey to average 21 pounds net per case of 24 sections, no section of this grade to weigh less than 13½ ounces.

Cases of half separated honey to average not less than 22 pounds net per case of 24 sections.

Cases of unseparated honey to average not less than 23 pounds net per case of 24 sections.

No. 1 LIGHT AMBER.—Sections to be well filled and evenly capped, except the outside row, next to the wood; honey white or light amber; comb and cappings from white to off color, but not dark; comb not projecting beyond the wood; wood to be well cleaned.

Cases of separated honey to average 21 pounds net per case of 24 sections; no section in this grade to weigh less than 13½ ounces.

Cases of half-separated honey to average not less than 22 pounds net per case of 24 sections.

Cases of unseparated honey to average not less than 23 pounds net per case of 24 sections.

No. 2.—This includes all white honey, and amber honey not included in the above grades; sections to be fairly well filled and capped, no more than 25 uncapped cells, exclusive of outside row, permitted in this grade; wood to be well cleaned, no section in this grade to weigh less than 12 ounces.

Cases of separated honey to average not less than 19 pounds net.

Cases of half-separated honey to average not less than 20 pounds net per case of 24 sections.

Cases of unseparated honey to average not less than 21 pounds net per case of 24 sections.

DENVER.—We have no comb honey to quote, as our market is entirely cleaned up. Our jobbing quotations on white extracted are 9 cts.; light amber, 8; strained, 6½ to 7½. We pay 26 cts. in cash and 28 in trade for clean yellow beeswax delivered here.

THE COLORADO HONEY-PRODUCERS' ASS'N.

Denver, June 3.

SAN FRANCISCO.—New comb honey is quotable at 15 to 16 cts.; water-white extracted, 9 to 9½; light amber, 8 to 9; amber, 7 to 8; dark, 5 to 6. Beeswax, 23 to 28. A few small shipments of new honey have been received, and the demand for fancy comb exceeds the supply.

San Francisco, May 31. JOHN C. FROHLIGER.

ZANESVILLE.—The local market is bare of comb honey, with no offerings at the present time. Up to this time, for some weeks past the demand has been exceedingly slack; but some revival is anticipated by the time the new crop arrives. Best white comb would now command about 20 cents—the limit this market will stand. Extracted is quiet, with prices nominally 11 to 12 for white. For beeswax, producers are being offered 29 cts. in cash, or 31 in trade.

Zanesville, June 3.

E. W. PEIRCE.

LIVERPOOL.—Since we last reported to you, our market for beeswax has been firm, and about 40 packages of Chilean and Peruvian sold at full prices from \$33.24 to \$39.32 per cwt. Further arrivals are expected, and the demand is perhaps not quite so brisk. Four tons of Chilean, f.a.q., sold at \$36.28, c. i. f., net cash. Other descriptions are quoted as follows: African, \$32.16 to \$34.48; Jamaican, \$37.72; West Indies, \$32.64 to \$36.28. The demand for honey of late has been disappointing. Considerable arrivals of Hayti and Jamaican in London have been selling at rather lower prices than we are asking here. Sales of Chilean, pile 3, have been made to the Continent at \$6.12 and \$6.24, i. f.; 200 barrels offer for shipment at \$6.30, without finding buyers. Californian is quoted at \$10.08 to \$10.80. Stocks of other descriptions have sold at different quotations as follows: Haitien, \$5.76 to \$7.20; Peruvian, \$3.84 to \$4.80; Chilean, \$5.52 to \$8.16; Jamaican, \$6.24 to \$8.16; Californian, \$9.60 to \$10.92.

Liverpool, May 29.

"THE BUSY BEE MEN"

51 WALNUT STREET

CINCINNATI, OHIO

We Pay the Highest Cash Market Price for Honey and Beeswax Always

SPECIAL DELIVERY

During this month we shall double our usual efforts in points of delivery and service. Early indications not having been most favorable, it is possible many beekeepers will not have laid in a sufficient stock of supplies, such as sections and foundation, for the clover and basswood crop this month. We are prepared to make up for this oversight by having a large stock of both sections and foundation on hand for instant delivery. We carry nothing but the Root make, which insures the best quality of every thing. We sell at factory prices, thereby insuring a uniform rate to every one. The saving on transportation charges from Cincinnati to points south of us will mean quite an item to beekeepers in this territory. We are so located that we can make immediate shipment of any order the day it is received.

Honey and Wax

If you haven't made arrangements for the disposition of your honey and wax for this season, consult us. We buy both in large quantities, and can assure you of fair and courteous treatment, and a good price for your crop.

Shipping-cases

To sell your crop to the best advantage it must be well put up in attractive style. We have shipping cases that answer every requirement of looks and utility. Small producers who sell their crops locally will be interested in the cartons in which comb honey is put up to sell to the fancy customers at top-notch prices. We have honey-cans too, in cases for those who produce extracted honey. In fact, there isn't any thing we don't have that the beekeeper needs, either to produce his crop or help to sell it.

PUBLICATIONS ON

BEE CULTURE

Please use coupon below, checking the numbers of items wanted.

The pamphlets and booklets listed below are of more than ordinary interest:

- 1 **My First Season's Experience with the Honey-bee.** By the "Spectator," of the *Outlook*, of New York. A ten-page leaflet detailing the experiences of this well-known writer. You will read the leaflet through before you lay it down. Free.
- 2 **The Bee-keeper and Fruit-grower.** A 15-page booklet giving actual facts regarding the value of bees to fruit, and showing how bee-keeping may be doubly profitable to the fruit-grower. Fruit-growers are realizing as never before the necessity of having honey-bees in close proximity to their blossoming fruit. Free.
- 3 **Bee-keeping for Sedentary Folk.** A 24-page leaflet reciting the actual experiences of an amateur bee-keeper, showing what equipment is best, points derived, etc. Free.
- 4 **Catalog of Bee-keepers' Supplies.** Our complete catalog will be mailed free to any address on request.
- 8 **Habits of the Honey-bee.** By Dr. E. F. Phillips. A somewhat scientific handling of the habits and anatomy of the bee. Price 10 cts.
- 9 **How to Keep Bees.** A book of 228 pages detailing in a most interesting manner the experience of a beginner in such a way as to help other beginners. Price \$1.00 postpaid.
- 10 **The A B C of Bee Culture.** A complete encyclopedia of bees, of 576 pages, fully illustrated, \$1.50 postpaid; half leather, \$2.
- 11 **Cleanings in Bee Culture.** A 64-page illustrated semi-monthly magazine, the leading exponent of bee culture in this country. Ten cents per issue, but to new subscribers we will furnish it six months for 25 cts.
- 12 **Back-yard Bee-keeping.** Six interesting lessons written in readable newspaper style. Many facts to encourage the "City Bound" man or woman with the back-to-the-land longing. Free.
- 15 **Truth About Sweet Clover.** Interesting booklet of nearly 100 pages. Tells of value of sweet clover for honey, for plowing under, as fertilizers of the soil, and food for horses, cattle, swine, sheep, etc. Free.

The coupon below may be used as an order sheet by properly checking the numbers of items wanted and adding your signature, and remittance, if required.

P W Weeder No. 2

Its leading feature is the easy adjustability to any height by our patented device. Weighs less than 10 lbs.

The Wonder of the Eastern Coast. Does unexcelled work in the field or garden. Among beets, onions, etc., it runs between the rows without injury to the growing plants on either side, but

cuts down every weed.

Price **\$2.50**

Money back if dissatisfied. Other weeders for every requirement.

P-W Mfg. Co., Salem, Mass.

MILLER'S STRAIN Red-clover ITALIAN QUEENS

By return mail after June 5th to 10th, or money refunded. Bred from my superior breeder; for business, gentle; no better hustler; bees just roll honey in; three-banded; Northern bred; hardy and vigorous; winter well; not inclined to swarm; bred from best leather-colored, long-tongued, red-clover strains. Untested, \$1.00; six, \$5.00; dozen, \$9.00. Select untested, \$1.25; six, \$6.00; dozen, \$11.00. Satisfaction guaranteed. . . . I. F. MILLER, previously of Brookville and Reynoldsville, Pa., a queen specialist for 15 years, is agent and breeder for E. A. Miller. Send all orders to

I. F. MILLER, Rt. 2, Oil City, Pa.

Wholesale Dealers and Commission Merchants in

Honey, Beeswax, Maple Sugar and Syrup, etc.

Consignments solicited. Established 1875.

WANTED!

Early shipments of comb honey in small or carload shipments.

We have a good market for choice honey, and can use large quantities if the color is nice and white, and the flavor is not too pronounced.

Our trade likes the white clover best, but we can use other flavors.

Write us at once even though your crop is not ready.

Tell us what price you want, and a complete description of package used in shipping. You will get a prompt answer.

WE CARRY AN UP-TO-DATE LINE OF
BEEKEEPERS' SUPPLIES

Write for our 64-page catalog free, and for lowest prices on supplies. Full information given to all inquiries. We handle the best make of goods for the beekeeper. . . Freight facilities good. Let us hear from you.

JOHN NEBEL & SON SUPPLY CO., HIGH HILL, MO.

Untested Italian Queen-Bees

6 Queens for \$4.50; 3 for \$2.50; 1 for 90 cts.

We usually begin mailing queens in May, and continue thereafter on the plan of "first come first served." The price of one of our Untested Queens alone is 90 cents, or with the old American Bee Journal for one year—both for \$1.60. Three queens (without Journal) would be \$2.50, or 6 for \$4.50. Full instructions for introducing sent with each Queen, being printed on the underside of the address-card on the mailing-envelope. You can not do better than to get one or more of our fine Standard-bred Queens.

American Bee Journal,

Hamilton, Illinois

GOODS ordered now will reach you in time for your first swarms. More and more are our customers adopting the plan of ordering early.

Yes, we will ship at once, and send Root's Goods only, and at their prices. Save time and freight charges by ordering at Root's Headquarters in Michigan.

BLANKE'S BEE BOOK FREE!

**A Combined Catalog
and Hand-book on
Bee Culture.**

This book is more than a catalog of supplies—contains many helpful hints on bee culture. In the back is a catechism for beginners in bee culture, and even the old-timers can get much useful information out of it.

It describes our complete line of hives, supers, extractors, smokers, etc.

The book costs you nothing. Write for it. At the same time you might tell us what you are needing in bee supplies, and let us write you a special letter on the subject.

Blanke Mfg. & Supply Co.
Blanke Bldg., St. Louis, Mo.

PLENTY OF QUEENS READY TO MAIL NOW

At the following prices: Untested, 90c each; 12 for \$9.00; \$65.00 for 100. Tested, \$1.00; 12 for \$10.00; \$75.00 for 100. I have some fine breeders for \$5.00 each.

B. M. CARAWAY, MATHIS, TEXAS

GOLDEN ITALIAN QUEENS

\$1.00 each; six for \$5.00; twelve for \$9.00—
untested and warranted.

J. B. CASE, PORT ORANGE, FLA.

W. H. Laws

is now mailing queens every day except Sunday. These queens are going to almost every State in the Union. A statement in public print says, "The postoffice at Beeville has probably cancelled more stamps on queen-cages than any other postoffice in the world." Whether this is true or not, it is true that Laws' queens are giving eminent satisfaction, and old customers are continually renewing their orders.

I am breeding but the one strain of three-banded Red-clover Stock Italians. A square deal and good queens are all that I can promise. I shall be pleased to have your order, which will be filled in rotation; however, I can also take care of rush orders.

Prices: Single queen, \$1.00; six for \$5.00; 100, \$75.00.

Little Wonder, 2-inch, each, .50; mail, .65.

Honey-knife, .70; mail, .80.

Manufactured only by

"If goods are wanted quick, send to Pouder."

(Twenty-third year.)

Quality is Economy

You can secure quality here, not only in the goods but also in quick service and low transportation. If you are requiring anything in Bee Supplies, do not allow distance to be a consideration. In many instances I can save time for you, regardless of distance. Quite a few winter losses have been reported, and your requirements may seem small; but small orders receive and deserve the same attention here as the larger ones. Those who have met with winter losses seem to be replacing with improved facilities; and after all they may profit by the losses, and our industry has never been on a better basis than it is to-day. Just this very morning I was much interested in a remark by Mr. H. P. Dean, of Solon, Ind., who left his order here and remarked that he expected a yield from his orchard this season of ten thousand barrels of apples; that trees were producing that had not produced before, and that he believed half the crop could be credited to his apiary.

My catalog of everything required in the beeyard is free, and I should be glad to send it to any who are interested.

WALTER S. POWDER, Indianapolis, Ind.

859 Massachusetts Ave.

New Stock

We already have received a large well-assorted stock of fine supplies for the coming season. We carry no dead or out-of-date stock in our warehouse. You can be sure of getting fresh, clean stock if you order of us.

When You Buy Lewis Beeware You Get ———

Lewis Quality—which means that all Lewis Hives are made out of clear white pine, and Lewis sections made out of fine bright basswood. The material in these goods is the best obtainable, and selected by experts.

Lewis Workmanship—The Lewis factory is equipped with the latest improved machinery, constantly watched over by experts. The Lewis head mechanic has had thirty-five years of bee-supply experience, the superintendent of bee-hive department twenty-nine years; the superintendent of sections twenty-eight years. These and many other skilled men have a hand in all the Lewis goods you buy.

Lewis Packing—All Lewis Beeware is carefully and accurately packed. A patent woven wood and wire package, made only by the Lewis Company, is employed largely in packing. This makes the package light, compact, and damage-proof.

Lewis Service—Years ago all goods were shipped direct from the factory, with attending high freight rates and delays during the honey season. Now Lewis Beeware can be obtained almost at your own door. Over thirty distributing houses carrying Lewis Beeware by the carload are dotted all over the United States and foreign countries. Write for the name of the one nearest you.

G. B. Lewis Company, Manufacturers of Beeware, Watertown, Wisconsin

SEE AD. IN LAST ISSUE

What's the use?

Why bother to raise so many "good things" unless—

—Unless you *save* them. Your wife can "put up" many kinds of fruit. But it isn't so *easy* to "can" vegetables.

Not—if she *depends* on old-style, narrow-necked, tin-topped, screw-capped jars, that take in only *small* fruit. This year find out the better way to "put up" fruit, and vegetables, too—the

E-Z SEAL JARS

This is the all-glass jar, with the all-glass cap—no metal to taint the fruit—no twisting and turning. No shattering, no splattering. Easy to fill, easy to seal, easy to open and clean.

Don't allow good garden stuff or fruit "to go to waste." Your vegetables and fruit will *keep* in these air-tight, all-glass sanitary jars.

Free Jar—Free Book

Cut out this coupon, take it to your grocer—he will give you one E-Z Seal Jar—FREE. Be sure

and write us for FREE Book of Recipes—it tells many things you should know.

In order to secure free jar, present this coupon to your dealer before September 1, 1912, properly filled out.

HAZEL-ATLAS GLASS CO.
Wheeling, W. Va.

This is to certify that I have received one "Atlas" E-Z Seal Jar free of all cost or obligation. This is the first coupon presented by any member of my family.

Name

Address

TO THE DEALER:—Present this to jobber from whom you received E-Z Seal Jars. All coupons must be signed by you and returned before November 1, 1912. DEALER'S CERTIFICATE. This is to certify that I gave one "Atlas" E-Z Seal Jar to the person whose signature appears above.

Every Bee-keeper Should Own and Read "The Manual of the Apiary"

By PROF. A. J. COOK

This interesting book is a very complete treatise on bees and bee-keeping, and is particularly valuable where one is interested in the anatomy and physiology of the bee, which has been very completely covered in this work. It is also valuable for its chapter on honey-plants, or bee-botany; 540 pages with good illustrations; bound in cloth. Price, by mail, \$1.15; \$1.00 by express or freight. . . . Order from the author,

A. J. Cook, Pomona College, Claremont, Cal.
Or from Dealers in Bee-supplies Everywhere

GRAY PRINTING CO., Fostoria, O.
Make ENGRAVINGS for GLEANINGS

Requeen your bees this season, and get the best results from your bees. Our strain of Italians, either three-banded or golden, will make a marked improvement apparent in your bees, and increase your honey profits. We can furnish queens promptly at the following prices:

- .90 for untested;
- \$1.00 for tested;
- \$1.50 for select tested;
- \$5.00 for the best breeding queens.

Full colonies of bees in new ten-frame 1½-story Root hives for \$10.00, f. o. b. Beeville.

Even though the season is somewhat advanced, we have been keeping our stocks of supplies right up, and you will find us ready to make immediate shipment of any thing needed in the line of hives, frames, foundation, sections, extractors, cans, shipping cases—in fact, a complete line of Root's goods as listed in their catalog and ours, the only difference being that the southern buyer has the benefit of our stock, ability to handle orders promptly, and the saving on transportation charges. We sell goods in original factory packages, whether you buy in large quantities or in single lots.

Our stock of cans and shipping cases is more complete than ever, and we can guarantee satisfaction with anything along this line. Honey attractively put up is half sold, and it pay you to try our packages this season.

Orders mailed to us will have the same personal attention that you would have should you visit us.

TOEPPERWEIN & MAYFIELD

Corner Nolan & Cherry Streets
SAN ANTONIO, TEXAS

ROOT'S BEEKEEPERS SUPPLIES

You may have a catalog of supplies; but if you haven't ours for 1912 you have missed something really worth while, and should get one at once. It is the largest and most complete ever published—more than a mere price list of supplies—a book that every beekeeper can read with pleasure and profit. Beginners will find answers to many perplexing questions, and advanced beekeepers timely suggestions that will save them money. Old customers are writing us frequently letters like the following:

Your catalog for 1912, designated ROOT'S BEEKEEPERS' SUPPLIES, is received, and I certainly thank you for this book. I have had your catalog on my desk for years, and have used Root's supplies all along. I note the enlargement and improvement in your new catalog, and notice many things I expect to add to my apiary.
Crystal City, Texas. C. W. Cox.

Our catalog this season also gives a full and complete list of books and booklets which we can supply. Many of these booklets are free, which doesn't mean that they are not worth reading, but simply that we want you to be informed on the subjects of which they treat. Send for a catalog, and check those in which you are interested.

Quick Deliveries

Next to having the best goods made, there is nothing so important to the beekeeper in the busy season as to have goods delivered just when they are wanted most. It isn't always possible to ship goods from a distant factory and have them reach destination within a day or two, as is sometimes necessary during the height of the season, but with distributing-houses located in the large shipping-centers we are able to supply beekeepers everywhere, with no loss of time and with minimum transportation charges.

Send Your Hurry Orders

to any one of the offices listed below, and let us show you what we can do for you in point of service. Cars are going to these branches at the rate of two or three a week, so the stocks are new and fresh, and we usually have just what you want. If it isn't in stock at your nearest branch our manager will include your order with his specifications and you may have your goods come in the next car, thereby saving on transportation charges and getting the goods in better shape than you would by local freight.

Whatever Your Wants

we can supply you, and, of course, there is no question about the quality of our goods. The name "ROOT" in connection with bee-supplies means the best of every thing in this line, and the best is always the cheapest, as our customers will testify. If you have never used our supplies you should make a trial of them this season. Once used, we are sure you will want no other.

I have just received my goods, order No. 10,739. I am more than pleased with them. I had intended to make my hives, but when I received the sample hive and saw the No. 1 pine lumber from which it was made, and considering the workmanship, I am satisfied I can buy cheaper than I can make them; enough cheaper to save the price of the lumber.

QUIRIN'S famous improved Italian queens, nuclei, colonies, and bees by the pound, ready in May. Our stock is northern-bred and hardy; five yards wintered on summer stands in 1908 and 1909 without a single loss. For prices, send for circular.

QUIRIN-THE-QUEEN-BREEDER, Bellevue, O.

Special Notices

By Our Business Manager

Our Philadelphia manager, Mr. Wm. A. Selser, expects to continue lectures on beekeeping again this year on our roof at 10 Vine Street, Philadelphia, Pa., during May and June, every Tuesday and Friday, between 11 and 12 o'clock. Visitors desiring to see the actual work with the bees, and the various manipulations of the hives, will be welcome at these demonstrations. Of course, visitors are welcome at our store during all business hours, but for lectures and demonstration work are invited particularly at the hours named.

SECOND-HAND CANS.

Our stock of second-hand cans at Medina has been oversold, and at this writing we have only a few boxes available for orders at Chicago, Ill. Until further notice our price on such as we may have to furnish will be \$3.50 for 10 boxes; 25 or more at 30 cts. per box.

SILVERHULL BUCKWHEAT.

The time for sowing buckwheat is near at hand. If you are in need of choice seed we are prepared to furnish it, while present stock lasts, at the following prices, bags included: Peck, 40 cts.; $\frac{1}{2}$ bushel, 75 cts.; 1 bushel, \$1.40; 2 bushels, \$2.50;

10 bushels, \$12.00. We do not have the Japanese in stock, but can get it to furnish at 20 cts. per bushel extra. If any of our readers have a surplus of seed to dispose of we should be pleased to hear from them with a sample, naming quantity and the price asked. We may be in a position to use some of it on orders which we may get and can not supply from here. At present we have a good stock of silverhull; but in the shipping season it sometimes goes very suddenly; and at such times it is an advantage to know where further stock is available.

SECOND-HAND FOUNDATION MILLS.

We have to offer the following list of foundation-machines which have been used, but are in fair condition. In many cases they will answer as well as a new machine where you have only a moderate output. Send for samples of any mill in the list which may interest you.

No. 0121, $2\frac{1}{4}$ x10-inch heavy hex. brood mill. An old-style Dunham machine without cam adjustment; in rather poor condition. Price \$8.00.

No. 0129, 2x10 round cell medium-brood mill, in style frame, in good condition. Price \$14.00.

No. 0139, $2\frac{1}{2}$ x6 hexagonal thin-super mill, in very good condition. Price \$14.00.

No. 0140, $2\frac{1}{2}$ x6 hexagonal thin-super mill, in very good condition. Price \$14.00.

No. 0151, $2\frac{1}{2}$ x6 hexagonal cell extra thin-super mill, one bad cell, otherwise in good condition. Price \$12.00.

No. 0152, $2\frac{1}{2}$ x6 hexagonal thin-super mill, extra good for regular-width super foundation. Price \$12.00.

No. 0153, $2\frac{1}{2}$ x6 hexagonal thin-super mill. No. 0154, ditto. Both in very good condition. Price \$14.00 each.

No. 0156, $2\frac{1}{2}$ x6 extra thin-super mill, fair. Price \$10.00.

No. 0157, $2\frac{1}{2}$ x6 thin-super mill, in good condition. Price \$12.00.

No. 0160, $2\frac{1}{2}$ x6 hexagonal thin-super mill in good condition. Price \$12.00.

No. 0164, $2\frac{1}{2}$ x6 hexagonal thin-super mill in fair condition. Price \$10.00.

No. 0165, $2\frac{1}{2}$ x6 hexagonal extra-thin super mill in fair condition. Price \$11.00.

No. 0166, $2\frac{1}{2}$ x6 hexagonal thin-super mill in extra good condition. Price \$14.00.

No. 0167, $2\frac{1}{2}$ x6 hexagonal extra-thin super mill in fair condition. Price \$11.00.

No. 0168, $2\frac{1}{2}$ x6 hexagonal thin-super mill in good condition. Price \$12.00.

No. 0169, $2\frac{1}{2}$ x6 hexagonal extra-thin super mill in extra good condition. Price \$15.00.

No. 0147, $2\frac{1}{2}$ x6 thin-super mill in extra good condition. Price \$15.00.

No. 0175, $2\frac{1}{2}$ x10 light-brood mill in good condition. Price \$16.00.

No. 0176, $2\frac{1}{2}$ x6 extra thin-super mill in fair condition. Price \$12.00.

NEW BOOKLET OF HONEY RECIPES.

Booklet No. 31 of our Beekeepers' Ten-cent Library, entitled "The Use of Honey in Cooking," is a collection of about 100 tested recipes for making cakes, cookies, breads, etc., in which honey is used. In many ways this is the most complete and interesting honey-recipe book which has ever been prepared for wide distribution. The receipts were collected from beekeepers and good cooks everywhere, and carefully tested under our personal supervision during the past year. Only those that have given entirely satisfactory results are included in this collection.

By way of illustration, "The Use of Honey in Cooking" has as a front cover a reproduction of a capped comb; and on the five following right-hand pages, opposite descriptive reading-matter, these illustrations appear in order: "The same comb that we show on cover with the cappings shaved off with a sharp knife, exposing the dripping honey in the cells;" "The uncapped combs being lowered into a honey-extractor;" "Honey-extractor in operation, showing how the combs are whirled rapidly and the honey thrown out of the cells by centrifugal force against the inside of the can;" "Drawing off the honey through the gate at the bottom of the extractor;" "The comb after being taken from the extractor, showing the cells are undisturbed and the comb as good as new, and ready to be filled again

by the bees." Thus it will be seen that the complete process of the making of extracted honey is pictorially explained. This is a result which has long been sought, to correct the popular impression as to the manufacture of extracted honey by some artificial process.

Under the heading of "Food Value of Honey" an introductory of seven or eight pages appears, with a discussion of the subjects, "What is Honey?" "Different Flavors of Honey," "Why Use Honey in Cooking," "Where to Keep Honey" "Honey recipes," "Caution Regarding the Use of Honey in Cooking."

The recipes are set in ten-point type of plan and readable face, and the booklet is printed on paper of very fine quality, with paper cover. There are 64 pages in all. While there will be a great demand for single copies of this booklet from our readers and friends throughout the world at the price of 10 cents per copy, we anticipate a still larger demand from beekeepers, who will appreciate the advantage of using advertising matter of this high class in their honey-selling campaigns. We have priced copies of "The Use of Honey in Cooking" in considerable quantities, and the back cover page has been left blank so that the advertisement of the local dealer or honey-distributor may be placed thereon. It is our desire to offer these booklets for sale in quantities, as desired, at the following prices, which include the printing of an advertisement or price list, with name and address upon the back cover. No other address will be given in your booklet.

100 copies of "The Use of Honey in Cooking," printed with your advertisement.	\$ 4.50

Quotations on larger quantities upon request.

Special Notices

A. I. ROOT

TURKEY SECRETS.

The above is the title of one more of the bright little books given to the world by our enterprising friends of the Philadelphia *Farm Journal*. The book tells all about raising turkeys and getting them ready for the market in much the old-fashioned way; and it may be that this is the best way; but I looked over the pages in vain for something about hatching turkeys with incubators, and I could not find it even mentioned. Once more, I have been led to believe, through the various poultry journals, that turkeys can be successfully reared in confinement, or perhaps in moderate confinement. This book has little or nothing to say on this matter. I am well aware that it is their nature to roam over "all creation," for they are (or recently have been) a wild bird. I hope, however, a way will be discovered, if it has not already been done, either through a different breed or otherwise, to grow turkeys in moderate confinement; and, if I am correctly informed, the only way of domesticating the wild turkey (and to a considerable extent its crosses with tame turkeys) is to keep them in a covered yard—that is, one covered with three or four inch poultry-netting. Of course, such covered yards could not very well be large, on account of the expense.

STRAWBERRY SECRETS.

I was somewhat disappointed to find this book is devoted principally to fall-bearing strawberries; but I was pleasantly surprised to discover that with the aid of new varieties and special treatment fall-bearing strawberries are now grown by the acre. Of course, this refers to strawberries here in the North. In Florida all strawberries are fall-bearing, as I have explained. They begin to put them on the market about Thanksgiving day, and this continues all winter and well on till April and May. The surprising part of it is that good strong plants set out in August and September begin to furnish fruit in December, and largely in January. I was a little surprised that the book does not seem to mention strawberry-growing in Florida. Not only are special varieties needed for securing a fall crop, but the

blossoms must be kept clipped off carefully to prevent fruit-bearing in the spring and summer; and it just now occurs to me that my good friend, Jay Palmer, of Traverse City, Mich., has invented a machine something like a pair of scissors with very long handles, and with this simple machine the blossoms or runners can be clipped without stooping down. I think I have also heard mention of an arrangement on the end of a stick, something like a hoe-handle, that is operated by pulling a string. These machines may be in the market for sale; but I do not remember having come across them as yet. The price of these two books is 25 cts. each; but subscribers to that spicy and breezy *Farm Journal* get them free of charge.

WILBUR WRIGHT; WHAT OUR PRESIDENT AND ARMY OFFICERS HAVE TO SAY IN REGARD TO HIS UNTIMELY DEATH.

After Our Homes was in type I came across the following, which I clip from the Bangor (Maine) *Weekly Commercial*:

DESERVES TO STAND WITH FULTON, STEPHENSON, AND BELL.

Washington, May 30.—President Taft, who presented the medals granted by Congress to Wilbur Wright and his brother Orville, and who had frequently seen Mr. Wright fly, Thursday dictated the following statement:

"I am very sorry that the father of the great new science of aeronautics is dead, and that he has not been permitted to live to see the wonderful development that is sure to follow along the primary lines which he laid down. He deserves to stand with Fulton, Stephenson, and Bell."

Secretary Stimson said:

"Besides being probably the foremost exponent of aviation on this side of the Atlantic, Mr. Wright was a citizen of whom America may be proud for his many qualities, his perseverance, modesty, skill, and attention to his profession."

Major General Leonard Wood, chief of staff of the army, said:

"The death of Wilbur Wright removes the foremost figure in aviation in America. The man has done more for the practical development of aviation along safe and well-thought-out lines than any one else; was a citizen of the best type, and the army has lost a man who taught it most of what it knows of aviation."

If I am correct, it is almost without precedent to have the President of the United States take notice or make public mention of the death of a comparatively humble citizen.

The following premiums will be offered at the Oregon State Fair, Salem, Oregon, Sept. 2-9.

Specimen of comb honey, not less than 24 pounds, quality and manner of putting up to be considered.	\$ 5 00	\$3 00
Most attractive display of comb honey.	10 00	5 00
Specimen of extracted honey, not less than 24 pounds, quality and manner of putting up for market to be considered.	5 00	3 00
Most attractive display of extracted honey.	10 00	5 00
Specimen of beeswax, not less than 10 pounds, soft bright yellow wax to be given preference.	4 00	2 00
Most attractive display beeswax.	6 00	3 00
Honey vinegar, not less than one gallon shown in glass.	3 00	2 00
Single-comb nucleus three-banded Italian bees.	5 00	3 00
Single-comb nucleus golden Italian bees.	5 00	3 00
Single-comb nucleus black bees.	5 00	3 00
Single-comb nucleus Carniolan bees.	5 00	3 00
Single-comb nucleus Caucasian bees.	5 00	3 00
The largest, best, most interesting, attractive, and instructive exhibition in this department, all things considered.	\$15 00	

FRANK MEREDITH, Sec., Salem.

The Greatest Success of the Season

By R. E. Olds, Designer

Reo the Fifth, as automobile men know, is the greatest success of the season.

Orders have come to us for 4000 carloads. We have orders in at this writing, from six separate cities, for a trainload to go in one shipment to each.

Nearly one thousand dealers, in one thousand towns, have allied themselves with this car.

I have never known a model to be in such demand as Reo the Fifth is now.

What It Means

This comes as the climax of my career — after 25 years spent in car building.

It comes from men who have faith in me. It comes from thousands of buyers who think the best I can do is the best they can get.

And every one of these men, I am glad to know, is getting more than he expects.

And All Get an Under-Price

I am also glad to know that you who buy now are getting over-value. There

was never a car so under-priced as this.

This initial price of \$1,055 is a price that can't continue. It is bound to go higher. It must be advanced with the slightest advance in materials.

But you early buyers are entitled to this under-price. The future of this car will be created by you — by the good words you say about it. That's why we started out this car at this altruistic price.

But I want none to expect that this price will continue. I know it must end before long.

Reo the Fifth

Passenger
Bodies

Top and windshield not included in price. We equip this car with mohair top, side curtains and slip cover, windshield, gas-tank, and speedometer—all for \$100 extra. SELF-STARTER, IF WANTED, \$20 EXTRA.

Each Car Will Sell Twenty in Time

Reo the Fifth is not built for a season. It is built for a very long pull.

Men will never find a way to greatly improve it. The future can bring none but minor changes.

I say this, remember, after 25 years spent in car building. This car I regard as pretty close to finality.

Now Each Car is a Salesman

The future of Reo the Fifth depends on the cars which go out from our shops this spring.

So no car was ever more carefully guarded. Not a

detail is slighted, despite this rush of demand.

The steel is all analyzed. Parts are ground over and over to get utter exactness.

Every part gets repeated inspections, and the slightest flaw discards it. Every important part must pass radical tests.

The engines are tested for 48 hours. Each finished car is subjected to a strenuous try-out. Hundreds of men are on the alert here against the least imperfection.

The bodies are finished with 17 coats. We give the last touch to every

detail of finish, regardless of cost or time.

For the cars of this Spring are built to build reputation. The future fame of Reo the Fifth depends on their performance.

We expect each car to sell twenty in time. So you who are buying this model now are getting utter perfection—the very best we can do.

1000 Dealers

There are dealers now in nearly 1000 towns to show Reo the Fifth to the interested.

Write for our book showing the various bodies and we will tell you the nearest dealer. Please write now.

R. M. OWEN & CO, General Sales Agents for REO MOTOR CAR CO., Lansing, Mich.

Canadian Factory, St. Catharines, Ont.

New Center Control All Side Levers Abandoned

One distinguishing feature in Reo the Fifth is this center, cane-handle control.

All the gear shifting is done by moving this lever less than three inches in each of four directions. It is done with the right hand.

Both brakes are operated by foot pedals, one of which also operates the clutch. So

the entrance in front on either side is clear.

This arrangement permits of the left side drive, heretofore possible in electric cars only. The driver sits, as he should sit, close to the cars he passes.

No man will be content with the old-style side levers when he knows this ideal control.

that Successfully TYPEWRITES PRINT

--17 Cents a Day!

The Printype Oliver Typewriter, which has crowded ten years of typewriter progress into the space of *months*, is now offered to the public for *17 Cents a Day!*

—Offered at the same price as an *ordinary* typewriter—*payable in pennies!*

The commanding importance of *Printype* is everywhere conceded.

For who does not see what it means to make the world's vast volume of type-written matter *as readable as books or magazines!* The Printype Oliver Typewriter is equipped with beautiful Book Type, such as is used on the world's *printing presses*.

Printype is distinguished by marvelous clearness and beauty. It does away with all strain on eyesight which the old-style *outline* type imposes. Printype puts life and style and *character* into typewritten correspondence. It makes every letter, every numeral, every character, "*as plain as print.*"

The complete story of *Printype* has never before been told. Here it is:

The Real Story of Printype

The idea from which "Printype" sprung resulted from the success of our type experts in equipping a typewriter used in our offices to write "The Oliver Typewriter" in our famous trade-mark

type just as the name appears on the outside of the machines and in all Oliver publicity.

The beautiful appearance and the marvelous clearness of the reproduction of our "ebony" trade-mark type, disclosed the possibilities of equipping The Oliver Typewriter to *write the entire English language in shaded letters!*

We worked for *years* on the plan and finally succeeded in producing, for exclusive use on The Oliver Typewriter, the wonderful shaded letters and numerals known to the world as "Printype."

The Public's Verdict

That the public is overwhelmingly in favor of Printype is impressively shown by this fact:

Already over 75 per cent of our entire output of Oliver Typewriters are "Printypes."

The public is *demanding* Printype in preference to the old-style type.

Within a year, at the present rate, 90 per cent of our total sales will be "Printypes."

Thus the Oliver Typewriter, which first successfully introduced *visible writing*, is again to the fore with another revolutionary improvement — *Printype, the type that prints print!*

To Corporations: The Oliver Typewriter is used extensively by great concerns in all sections of the world. Our "17-Cents-a-Day" Plan is designed to help that large class of typewriter buyers who want the same typewriter that serves the great corporations, but prefer the easy system of purchase.

The masses want The Oliver Typewriter because it stands the test of the largest corporations.

Meet "Printype"—You'll Like Its Looks

Ask for Specimen Letter and "17-Cents-a-Day" Plan.

Make the acquaintance of Printype, the reigning favorite of typewriterdom. Ask for a letter written on The Printype Oliver Typewriter, which will introduce you to this beautiful new type. We will also be pleased to forward the "17-Cents-a-Day" Plan on request. Address Sales Department,

The OLIVER Typewriter Company

116 Prospect St., Cleveland, O.

Cleanings in Bee Culture

VOL. XL. JULY 1, 1912. NO. 13.

COMB-HONEY OUTFIT NO. 7.

This outfit is especially adapted to the needs of those who winter indoors or live in a climate where the winters are mild. Each item has been very carefully selected, and we doubt the wisdom of leaving any article out; but the purchaser may do so without altering the prices on the other items.

One A B C and X Y Z of Bee Culture (536 pages)	\$1.50
One copy Dovetailed Hive and its Uses (or any other 10c book)	.10
One year's subscription to "Gleanings in Bee Culture"	1.00
(A large illustrated semi-monthly magazine)	
One Junior Root Smoker	.55
One pair cotton bee-gloves (small, medium, or large)	.50
One Alexander Bee-veil	.60
One full colony Italian bees in 10-frame Dovetailed Hive	12.00
(Complete with 32 section honey-boxes)	
One untested Italian Queen	1.50
Two Dovetailed Hives complete for comb honey, using 4x4 sections	6.90
(Nailed and painted, ready for the bees)	
One Porter bee-escape and board	.35
(for taking honey from the bees)	

SPECIAL OFFER { Delivered, after June 1st, at any express office, north of
Ohio River and east of Mississippi River **for \$25.00**

For delivery to points outside of above free limit, we will make terms on application.

In many cases a return of \$10.00 in honey has been secured the first year from just such an outfit as this; and in addition one swarm and possibly two may be secured, which practically doubles the value of the investment. This is not an uncommon occurrence. On the contrary, scores of men have done as well or better, where the conditions were at all favorable. Read these reports.

Gentlemen:—I must say that the two three-frame nuclei that you sent me last year beat anything here by over one-third. It has given them a pretty good name around here. So much for your stock. No more black bees for me.
Burford, Ont., Canada, Oct. 4, 1909.

W. M. KINSEY.

Gentlemen:—The bees and supplies arrived in perfect condition. So far they have given perfect satisfaction in every way. We opened the bees in the evening at about 4 o'clock, and the next morning bright and early they were hard at work in the orchard. I have worked around the hives at different times to see if the bees would show any signs of resentment, but they seem to be perfectly contented in their new home.
Madison, O., May 14, 1908.

Yours very truly,

W. M. HESS, JR.

Gentlemen:—The three-frame nuclei which I purchased from you on June 25th have paid in cash over 100 per cent on all outlay, and the pleasure derived from looking after them over 200 per cent. They still have about 60 to 65 pounds of honey in the hive.
734 Hayden Ave., Collinwood Sta., Cleveland, O., Oct. 17, 1908.

Yours very truly,

GEO. B. OGLE.

Gentlemen:—Our bee-outfit arrived in fine condition, and we transferred the bees in the yard, with the whole room of forty boys and girls standing around them. The day was cool and many bees dropped to the ground, apparently dead, but the children found if they held them in their hands and breathed on them that they would revive, so it ended by boys and girls having hands full of crawling bees. The bees were gentle as could be and now the children are not afraid of them, and if one gets on the window in the room, a boy will pick it off and put it out.

To say we are pleased is stating it mildly. We are delighted. There are many things we want to know but have Mr. Root's A B C of Bee Culture from the library and can learn by study and observation.

Very truly,

9120 Wade Park Ave., Cleveland, O., Apr. 25, 1910.

MISS LUELLA OBERHOLTZER,
(Teacher Lakewood General School, 8th Grade)

ST. PETER'S LUTHERAN CHURCH, NEW YORK, March 11, 1908.

Dear Sirs:—Enclosed please find my check for renewal of my subscription to GLEANINGS for five years. I greatly appreciate GLEANINGS, not only for the good and plain reading-matter, but also because it furnishes many kinks which otherwise one would be unable to find out. These kinks have enabled me in the last three years to sell from ten colonies on the average over \$100.00 per year. I donate the money to my church for charitable purposes, and the members are eager to buy, because they know my honey is absolutely pure.

Yours very truly,

A. B. MOLDENKE, D. D.

The A. I. Root Company, Medina, Ohio

Enclosed find draft for \$25.00, for which please send me Outfit No. 7, as listed above. I understand that you guarantee safe arrival and prepay all charges, if north of Ohio River and east of Mississippi River.

HONEY MARKETS

The prices listed below are intended to represent, as nearly as possible, the average market prices at which honey and beeswax are selling at the time of the report in the city mentioned. Unless otherwise stated, this is the price at which sales are being made by commission merchants or by producers direct to the retail merchant. When sales are being made by commission merchants the usual commission (from five to ten per cent), cartage, and freight will be deducted; and in addition there is often a charge for storage by the commission merchant. When sales are made by the producer direct to the retailer, commission and storage, and other charges, are eliminated. Sales made to wholesale houses are usually about ten per cent less than those to retail merchants.

EASTERN GRADING RULES FOR COMB HONEY.

FANCY.—All sections well filled, combs straight, firmly attached to all four sides, the combs unsoiled by travel-stain or otherwise, all the cells sealed except an occasional one, the outside surface of the wood well scraped of propolis.

A No. 1.—All sections well filled except the row of cells next to the wood; combs straight; one-eighth part of comb surface soiled, or the entire surface slightly soiled; the outside surface of the wood well scraped of propolis.

No. 1.—All sections well filled except the row of cells next to the wood; combs comparatively even; one-eighth part of comb surface soiled, or the entire surface slightly soiled.

No. 2.—Three-fourths of the total surface must be filled and sealed.

No. 3.—Must weigh at least half as much as a full-weight section.

In addition to this the honey is to be classified according to color, using the terms white, amber, and dark; that is, there will be "Fancy white," "No. 1 Dark," etc.

NEW HONEY-GRADING RULES ADOPTED BY THE COLORADO STATE BEEKEEPERS' ASSOCIATION, DECEMBER 13, 1911

FANCY WHITE.—Sections to be well filled, comb firmly attached on all sides and evenly capped, except the outside row next to the wood. Honey, combs, and cappings white, and not projecting beyond wood. Wood to be well cleaned; no section in this grade to weigh less than 13½ ounces.

No. 1.—Sections to be well filled, combs firmly attached on all sides and evenly capped, except the outside row next to the wood. Honey white or very light amber; comb and cappings from white to slightly off color. Comb not projecting beyond the wood; wood to be well cleaned; no section in this grade to weigh less than 13½ ounces.

CHOICE.—Sections to be well filled; combs firmly attached; not projecting beyond the wood, and entirely capped, except the outside row next to the wood. Honey, comb, and cappings from white to amber, but not dark. Wood to be well cleaned; no section in this grade to weigh less than twelve ounces.

No. 2.—This grade is composed of sections that are entirely capped, except row next to wood, weighing from ten to twelve ounces, also of such sections that weigh 12 ounces or more, and have not more than 50 uncapped cells all together, which must be filled. Combs and cappings from white to amber in color, but not dark; wood to be well cleaned.

EXTRACTED HONEY.—Must be thoroughly ripened, weigh 12 pounds per gallon. It must be well strained, and packed in new cans. It is classed as white, light amber, and amber.

STRAINED HONEY.—This is honey obtained from combs by all other means except the centrifugal extractors and is classed as white, light amber, amber, and dark; it must be thoroughly ripened and well strained. It may be put up in cans that previously have contained honey.

BOSTON.—We quote fancy white comb at 17 to 18; light amber, 15; amber, 14; fancy white extracted, 10 to 11; light amber, 9 to 10; amber, 9. Beeswax, 30.

Boston, June 19.

BLAKE-LEE CO.

INDIANAPOLIS.—No arrivals of new honey at this date. Best extracted honey sells at 11 to 12 in five-gallon cans. Several cars of comb honey arrived here during March, and much remains unsold in jobbing houses, and no stable prices can be named on comb honey at this writing. Beeswax is in good demand, and producers are being paid 30 cents per pound.

Indianapolis, June 17.

WALTER S. POWDER.

SAN FRANCISCO.—Comb honey is very slow in arriving, and the demand far exceeds the supply; but we are hoping for some, and the grocers are inquiring for it. Fancy brings 15 cts.; darker grades, less. Water-white extracted sells at 9½; light amber, 8½ to 9; amber, 7½ to 8; darker grades, 5 to 6. Orange-blossom honey is in demand, and finds a ready sale. Beeswax brings 26 to 28 for light, and 22 to 26 for dark, and is in fair demand.

San Francisco, June 15.

J. C. FROHLIGER.

BUFFALO.—There is hardly any thing doing now in honey. Old is about cleaned up, and no new in as yet. Comb honey is in very slow demand, owing to the very high price. No. 1 to fancy white comb brings 18 to 19; No. 2 white comb, 14 to 15; dark comb, 10 to 12. There is some call for extracted, and it sells well if of good quality. White clover or basswood brings 8 to 9; dark, 7 to 7½. Beeswax brings 30 to 32.

Buffalo, June 10.

W. C. TOWNSEND.

ZANESVILLE.—This market is bare of comb honey. While the demand has been abnormally light, indications are that there would be a little brisker movement now if the supply were available. For white comb, grading from No. 1 to fancy, producers should receive 13 to 16 cts. Extracted is moving very slowly, the principal demand being for small glass packages. At present we offer for beeswax 28 cts. cash, or 30 in exchange for supplies.

Zanesville, June 18.

E. W. PEIRCE.

Comb and Extracted Honey Wanted

Cincinnati, Ohio

SPECIAL DELIVERY

We have anticipated the needs of beekeepers for prompt delivery of supplies during the month of July, and have an unusually large stock from which to draw.

The honey-flow is promising larger than most beekeepers were prepared for, but we have sections and foundation on hand ready for instant shipment, so not a single pound of honey need be lost because of insufficient room in which to store it. Sections of all the standard sizes are here in the original packages, and we can put your name on a package of any size just as soon as your order reaches us.

You will find it will pay you, too, to use foundation liberally this season. Starters are good but full sheets are better, and you can very materially increase your honey crop by giving the bees this little assistance.

We buy honey too, and you will find us ready to give you a good price for your crop, and we can assure you of fair treatment.

Whatever your needs in the beekeeping line, we can supply them promptly, and we are glad to answer questions at any time.

CHAS. ISRAEL & BROS.

488-490 Canal Street, NEW YORK

Wholesale Dealers and Commission Merchants in

Honey, Beeswax, Maple Sugar and Syrup, etc.

Consignments solicited. Established 1875.

WANTED!

Early shipments of comb honey in small or carload shipments.

We have a good market for choice honey, and can use large quantities if the color is nice and white, and the flavor is not too pronounced.

Our trade likes the white clover best, but we can use other flavors.

Write us at once even though your crop is not ready.

Tell us what price you want, and a complete description of package used in shipping. You will get a prompt answer.

JOHN NEBEL & SON SUPPLY CO., HIGH HILL, MO.

Untested Italian Queen-Bees

6 Queens for \$4.50; 3 for \$2.50; 1 for 90 cts.

We usually begin mailing queens in May, and continue thereafter on the plan of "first come first served." The price of one of our Untested Queens alone is 90 cents, or with the old American Bee Journal for one year—both for \$1.00. Three Queens without Journal would be \$2.50, or 6 for \$4.50. Full instructions for introducing sent with each Queen, being printed on the underside of the address-card on the mailing-envelope. You can not do better than to get one or more of our fine Standard-bred Queens.

American Bee Journal,

Hamilton, Illinois

GOODS ordered now will reach you in time for your first swarms. More and more are our customers adopting the plan of ordering early.

Yes, we will ship at once, and send Root's Goods only, and at their prices. Save time and freight charges by ordering at Root's Headquarters in Michigan.

PLENTY OF QUEENS READY TO MAIL NOW

At the following prices: Untested, 90c each; 12 for \$9.00; \$65.00 for 100. Tested, \$1.00; 12 for \$10.00; \$75.00 for 100. I have some fine breeders for \$5.00 each.

B. M. CARAWAY, MATHIS, TEXAS

GOLDEN ITALIAN QUEENS

75 cts. each; six for \$4.50; twelve for \$8.00. Untested, warranted, good for black brood.

J. B. CASE, PORT ORANGE, FLA.

W. H. Laws

is now mailing queens every day except Sunday. These queens are going to almost every State in the Union. A statement in public print says, "The postoffice at Beeville has probably cancelled more stamps on queen-cages than any other postoffice in the world." Whether this is true or not, it is true that Laws' queens are giving eminent satisfaction, and old customers are continually renewing their orders.

I am breeding but the one strain of three-banded Red-clover Stock Italians. A square deal and good queens are all that I can promise. I shall be pleased to have your order, which will be filled in rotation; however, I can also take care of rush orders.

Prices: Single queen, \$1.00; six for \$5.00; 100, \$75.00.

Smoker engine, 4-inch, each, \$1.25; mail, \$1.50.

Doctor, $\frac{3}{4}$ -inch, each, .85; mail, \$1.10.

Conqueror, 3-inch, each, .75; mail, \$1.00.

Little Wonder, 2-inch, each, .50; mail, .65.

Honey-knife, .70; mail, .80.

Manufactured only by

"If goods are wanted quick, send to Pouder."

(Twenty-third year.)

RUSH ORDERS

For the benefit of readers who do not have my catalog at hand I wish to submit prices on articles that are in urgent demand at present. Any of these goods can be forwarded the same day order reaches me, and my catalog will be included with the goods.

Beeway. Sections:	100		A grade, \$.80; B grade, \$.70
"	250		" 1.60 " 1.40
"	500		" 2.75 " 2.50
"	1000		" 5.50 " 5.00
"	2000		" 10.50 " 9.50

Plain sections. 25 cents less per 1000.

Thin super foundation: 1 lb., 66c; 5 lbs., 64c; 10 lbs., 62c.

Medium brood foundation: 1 lb., 59c; 5 lbs., 57c; 10 lbs., 55c.

Foundation can be mailed, when urgent, at 25c per pound extra.

Hoffman brood-frames: 10 for 35c, or \$3.00 per 100.

Standard Root smoker: 85c, or by mail for 28c extra.

No 2 veil, with silk face, 60c.

See my catalog for other necessary articles required in the bee-yard. The list of hives and supers is especially interesting, and distance should not be considered when placing your orders here, when quality and prompt service are considered. Notice what a friend in South America has to say after securing several shipments from this house.

DEAR MR. POWDER:—I am very glad to inform you that the goods have arrived in perfect order, and I beg to express my gratification to you, dear Mr. Pouder, and to The A. I. Root Co. for your and their care in filling my last order. The goods are all o. k., and it is like you.
 Sao Paulo, Brazil, South America. D. AMORA VAN EMELEN.

Perhaps the above helps to explain why nearly all bee supplies used by our most successful beekeepers are of the make handled by this house. I buy beeswax, cash or trade. My catalog of bee supplies is free.

Root's Section-Honey Boxes!

THERE have been very few years when the outlook for a bumper honey crop has been brighter than it is now—at the opening of the season of 1912. Every indication points to an almost unprecedented honey-flow, and the bee-keeper who is not making most complete preparations to reap the harvest will not be very well satisfied with himself when the surplus has all been taken off this fall, or when he knows a big flow is on and he has no sections to put on his hives.

Of course the section problem is the most important one to the comb-honey man, and it MUST be solved right. Therefore why take risks? Why run the slightest chance of getting sections of uncertain quality, or experimenting at a price you can not afford to pay? We are the largest manufacturers of Section-Honey Boxes in the world—naturally we have the finest equipment for section-making, and cut up the best lumber. We are in close touch with every phase of bee-keeping—with every department of the honey trade—therefore we know the service sections are required to give, and we make ROOT'S SECTION-HONEY BOXES to meet these requirements. Years of experience and satisfied section patrons throughout the world ought to count; and you, Mr. BEEKEEPER, if you will buy ROOT'S SECTIONS, will understand why.

PRICE LIST OF SECTIONS

4¼x4¼ Beeway Sections—2 inch, 1½, 1¾, 1⅞, or 7 to foot wide.

We send 1½ style 2 beeway when your order does not specify style or width wanted.

No.	A	B	Weight
100	\$.80	\$.70	7 lbs.
250	1.60	1.40	18 "
500	2.75	2.50	35 "
1000	5.50	5.00	70 "

Plain or No-beeway Sections—4¼x4¼x1½, 1¾, or 1⅞; 4x5x1½ or 1⅞; or 3⅞x5x1½.

We send 4¼x1½ plain, or what will fit other items in your order, if you do not specify.

No.	A	B	Weight
100	\$.80	\$.70	6 lbs
250	1.60	1.40	15 "
500	2.75	2.50	30 "
1000	5.25	4.75	60 "

Price of larger quantities quoted on application.

COME SOUTH —TO— America's Market Gardens

Be healthy, happy and independent, under clear skies in a progressive country, raising GRAPE FRUIT, ORANGES, ETC.
Fruits and vegetables are grown to perfection in the Six Southern States (Virginia, North Carolina, South Carolina, Georgia, Florida and Alabama,) traversed by the Seaboard Air Line Railway,

FROM THE PEANUT FIELDS OF VIRGINIA TO THE ORANGE GROVES OF FLORIDA

Fertile land is now cheap—\$10.00 per acre and up, but will soon advance. Every inducement is offered to the man of limited means. Farms can be bought on easy terms. Low freight rates—quick transportation to the big markets. Good roads, schools and churches. Plenty of water—ideal climate the year 'round, no extreme heat or cold—high class labor. We want more good people, we have a big country full of natural advantages, close to large towns—not in a wilderness. An investment in Real Estate here is absolutely safe. Ten acres will make you independent. Hundreds of satisfied settlers are becoming wealthy, and enjoying life.

In the land of Manatee on the West Coast of FLORIDA you can raise two to three crops a year—net \$500 to \$1000 an acre.

Build a Home for your Family NOW. Give them the many advantages which were denied you. For handsome booklet and literature, write at once to:

H. C. CLEMONS, Boyd, Ky.

QUIRIN'S famous improved Italian queens nuclei, colonies, and bees by the pound, ready in May. Our stock is northern-bred and hardy; five yards wintered on summer stands in 1908 and 1909 without a single loss. For prices, send for circular.

QUIRIN-THE-QUEEN-BREEDER, Bellevue, O.

REPORTS ON OUR BEES.

Dear Sirs:—I received the bees in good order, and they are doing finely. Warwick, O., June 17. GEORGE J. HERTLE.

The A. I. Root Co.:—I should be pleased to have your price on 7½ pounds of bees; also the price on three queens. C. W. DEWRE. Lexington, Ill., June 14, 1912.

The A. I. Root Co.:—I am in receipt of yours of the 11th, and wish to say that I received the bees in good condition, and that they are now working very nicely indeed. G. C. WILBER. Elmore, N. Y., June 17.

The A. I. Root Co.:—I have had those bees you shipped me a week now, and they are doing finely. There were less than 25 bees lost in coming from Medina until they were comfortably at work in the hive. Now they have brood well under way. Montfort, Wis., June 16. J. W. OWENS.

The A. I. Root Co.:—The order shipped to me under date of June 11, 1912, has been received, and I am well pleased with it. I examined the frames this morning, and find the queen has been at work. They have built about a third of a comb in the new frame, which I think extraordinary for only a two-frame nucleus.

ARCHIE B. MILLER.

Rochester, Ind., June 16.

OUR HAND-MOORE STRAIN 3-BAND ITALIANS

Are the best honey-producers. Have spent our winterkeeping money, by buying them with red-clover, our queens are bred strictly for honey-getting qualities. Tested and set for \$3.00 a pair for stock.

LATSHAW HONEY CO., CARLISLE, INDIANA

Home Markets continued from page 2.

KANSAS CITY.—Everybody is anxiously waiting for some new honey, and we believe that the first No. 1 24-section white comb honey will bring \$3.75 per case, while, of course, off grades will bring a little less. For extracted honey there is only a little demand, and it is selling for 7½ to 9, according to quality. O. C. CLEMONS BEE SUPPLY CO. Kansas City, Mo., June 21.

CINCINNATI.—There is very little demand for honey at the present time; nevertheless, for the fancy comb honey we have we are getting \$3.75 a case from the wholesaler, and \$4.00 from the retailer. Light amber honey in large quantities we are selling at 6½ to 7½, and fancy table at from 8½ to 10, according to the quantity and quality purchased. Owing to the great loss of bees, no doubt there will be a fall in the price of beeswax, and only for the choicest wax can we pay 28 to 29, delivered here. Cincinnati, June 19. THE FRED W. MUTH CO.

ST. LOUIS.—We have no change to report in our honey market. No new honey has arrived so far, and we do not expect any before the fore part of next month. The quotations are nominal as follows: Fancy white comb honey, at 16 to 17; No. 1 white, 15 to 16; light amber, 13 to 14; dark, 8 to 11. Broken and leaking honey sells at much less. Extracted light amber California brings 8½ to 9; Southern light amber, 8 to 8½; Southern, in barrels and half-barrels, 7 to 7½ for light amber; dark, 6 to 6½. Beeswax prime brings 29½; inferior and impure, less.

R. HARTMANN PRODUCE CO.

St. Louis, Mo., June 18.

CHICAGO.—The sales of honey, both comb and extracted, have been light during June, but we should have some of the new crop during July. This market, however, does not care for it to any extent prior to August. Prices on comb are from 15 to 18, where it grades from No. 1 to fancy white. The ambers range from 10 to 12, and some of the fancy light ambers 13 to 15. Extracted white, according to kind and quantity, sells from 8 to 9, and the ambers from 7 to 8. Beeswax is steady at from 30 to 32 for the average grade.

Chicago, June 20.

R. A. BURNETT & Co.

NEW YORK.—There is nothing new in comb honey. Small shipments of the new crop are coming in from the South, and are selling at from 13 to 16 cts. according to quality. Arrivals of new crop of extracted honey from the South are now coming in quite freely, as well as from the West Indies. Prices are rather unsettled as yet, ranging all the way from 70 to 90 cts. per gallon, according to quality. Reports from California are rather conflicting, some of them estimating this year's crop at 500 cars, while others claim a very short crop. No offerings have been made as yet that we know of, and no prices established. Beeswax is steady at 30 to 31. New York, June 19. HILDRETH & SEGELKEN.

CHICAGO.—There is nothing specially interesting to report so far as the honey business is concerned. There is practically no demand for comb honey. There are occasional sales made of extracted. We do not look to see comb honey move in any quantities to speak of until about August. We quote No. 1 white Wisconsin clover comb honey, packed in 24-section flat cases, glass fronts, 16 to 17; choice quality and light amber, 14 to 15; medium amber and other inferior grades all the way from 2 to 5 cts. per pound less, depending on quality. Fancy water-white alfalfa extracted honey, packed in 60-pound cans, two cans to the case, 9; choice alfalfa extracted, same as above, but not quite as white, 8½; choice southern Californian, light-amber extracted honey, 8 to 8½. Bright pure beeswax is selling from 30 to 32.

Chicago, June 8.

S. T. FISH & COMPANY.

The summer meeting of the New Jersey Beekeepers' Association will be held at the apiary of Mr. Chas. H. Root, Red Bank, N. J., on Friday, July 12, 1912.

E. G. CARR, Sec.

New Egypt, N. J., June 17.

Special Notices

BY OUR BUSINESS MANAGER

BIENNIAL YELLOW-SWEET CLOVER SEED.

At this writing we are sold out of *Melilotus officinalis*, or biennial yellow-sweet-clover seed, and are very desirous of getting into communication with any of our readers who grow this kind of sweet clover and can arrange to save the seed. We are prepared to contract for several tons of seed of the right kind, either hulled or unhulled. Send us sample of the seed or the blooming clover if not yet ripe.

BUCKWHEAT SEED.

We still have some silverhull buckwheat seed to offer; but at the rate orders have been coming, it will not last long; and so far not one of our readers having a surplus of seed to sell has reported. We can get it of a dealer in Chicago, but the price will be 20 cts. per bushel higher than what we are asking for present stock; \$1.40 per bushel; 2 bushels, \$2.50. If you have any surplus seed, do not fail to let us know at once how much and what you ask for it, and mail a sample.

SIMMONS SWARM CONTROLLER.

We have arranged with Dr. L. A. Simmons, of Florida, to supply his swarm-controlling device, which has been described in these columns. The price of the swarm-controller, nailed up ready for use, is 50c each; \$4.50 for 10. Can be sent by mail for 25 cts. extra for postage. We have not tested the device on our own hives, and can not say from experience how it works, but to those who wish to try it we are ready to supply it as above.

HONEY-BAGS AT BARGAIN PRICE.

We have in stock about two thousand each of one and two pound honey-bags without any printing which we offer at a very low price to close out. The one-pound bag is 5x5, and we will sell the lot for \$3.00 per 1000, or \$5.00 for the lot of a little over 2000. The 2-pound are 5x7½ at \$4.00 per 1000, or \$7.00 for the lot of about 2000.

In our regular honey-bags printed in two colors without name and address we can supply the following sizes at the special prices named while stock lasts:

- 1 lb., 3½x5½, at \$4.75 per 1000.
- 2 lb., 5x7½, at \$6.00 per 1000.
- 3½ lb., 6x9½, at \$8.00 per 1000.
- 10 lb., 10x10½, at \$11.50 per 1000.

We are sold out of the 5-lb. size, and have in stock at this writing 14,000 of 1 lb., 10,000 of 2 lb., 2000 of 3½ lb., and 8000 of 10 lb. Name and address will be added for \$1.00 per 1000 extra for first 1000; 50c for each additional 1000 taken at the same time.

Special Notices

A. I. ROOT

PURITY BOOKS FOR YOUNG PEOPLE, BY PROF. T. W. SHANNON.

In our June 1st issue I gave Professor Shannon's address as Fredericktown, Mo. I am glad that there is now a publishing company at 211 West Walnut St., Louisville, Ky., which issues a fine list of up-to-date books on social purity. For particulars address the T. W. Shannon Publishing Co., as above.

BANKRUPT SALE OF THE PROPERTY OR PROPERTIES OF THE LEWIS PUBLISHING CO., ST. LOUIS.

I have in my hands a good-sized pamphlet of toward 100 pages describing the different "properties" of the Lewis Publishing Co., that are now to be sold at auction. You can get full particulars by writing to J. E. Conant & Co., auctioneers, Lowell, Mass. The pamphlet says on the front cover that this property represents "a tremendous expenditure of money in a very few years." Quite a few of the readers

of GLEANINGS know *considerable* about this "tremendous expenditure," some of them having sent Lewis as much as \$1000, to my knowledge; and yet whenever in our back numbers I have thought best to utter a warning or protest, quite a lot of people accused me of injustice to an honest man. It takes quite a stretch of the imagination to grant that such a man was *ever* honest; and, even if so, he was certainly unworthy of confidence while he was *continually* launching out in this, that, and the other "Tom Fool" speculation. He actually received *millions* of money from hard-working people, and yet his own *National Daily* itself, without any thing else, condemns the man in his operations, almost from its initial number.

HOMESEEKERS' REDUCED ROUND TRIP TO FLORIDA, FROM JUL. 2 TO DEC. 1, INCLUSIVE.

The Seaboard Air Line Railway Co. just gives notice that, commencing July 2, they will make the low round trip from Cincinnati, O., Cairo, Ill., Evansville, Ind., and Louisville, Owensboro, Henderson, Maysville, and Paducah, Ky., to stations in southern Florida, at the low rate of \$25.00. The limit of the trip is 25 days. As there have been so many questions asked in regard to Florida, what it is like in the summer time, etc., the above will give all an opportunity to see for themselves without a great outlay of money.

The dates of sale are as follows: July 2, 16; August 6, 20; September 3, 17; October 1, 15; November 5, 19.

I am planning now to take the trip myself in October. I want to go down and start gardening and some other things before Mrs. Root and I take our final departure after voting, here in November. Perhaps I should explain that the rates are quite a little cheaper for points in the *northern* part of Florida. Full particulars can be had on application to J. A. Pride, Industrial Agent of Seaboard Air Line, Norfolk, Va.

LIME FOR SWEET CLOVER--MORE ABOUT IT; FROM THE DIRECTOR OF OUR OHIO EXPERIMENT STATION.

Our experiments indicate that an application of a ton of burnt lime, or two tons of ground limestone, is entirely sufficient for a first application on this soil, and that subsequent applications may be reduced in quantity, although they should be repeated every four or five years. The object of the larger applications which you saw specified on the stakes was simply to determine whether a better effect would be produced by such applications. We are giving this matter of quantity and frequency of application a more extended test at Strongsville, on a part of the farm that I did not take you to on the day of the meeting there, as it was some distance away, and did not seem at the time to add materially to what I showed you, as it has been running for only a few years, and has not had time to produce its full effect. We are using in that test one ton every three years, two tons every six years, three tons every nine years, etc., in order to determine the best quantity and the best period for application. In handling cheap material like ground limestone it is sometimes more economical to put on a large quantity in one application than to repeat the applications of smaller quantities.

Our Bulletin 159, which I send you, gives the outline of our first experiment, and the results for the first few years. Circular 120, which I also send, contains a report on the later experiments started here. No report has yet been made of the work at Strongsville. I am now engaged in trying to get it into shape for publication.

C. E. THORNE, Director.

Wooster, O., June 24.

THE "EARLY JOE" APPLE.

In one of the last fall magazines A. I. Root spoke of the Early Joe apple, of which he and his family were so fond, and how he could not find any in nursery stock. We have a tree of that name, apples answering that description, which we and all boys, both large and small, in the neighborhood think is the finest and most delicious of all early apples. I never supposed that was the correct name until I read the article.

MRS. LILLIAN CRAWFORD.

Binghamton, N. Y., April 1.

We Buy Honey

If you have a large crop with no local market for the same, let us handle it for you. We buy in any quantity, large or small, and can assure you of satisfactory treatment. Send a good sample, and be sure that you tell us just how your honey is put up, and how much you have. Do not ship any honey to us without instructions, but wait until you have heard from your sample. We will offer a definite price, and give you shipping instructions.

Cans

We still have a good stock of cans, and can make instant shipment of anything in this line. Good cans and shipping cases are an absolute necessity if you would get the best prices for your honey. Even the best honey put up in poor containers will be graded as second class, and honey that in itself isn't the very best will often bring a very fair price if attractively put up.

Write us for information or advice on any beekeeping subject, and your letters will have careful attention.

A full line of Root's supplies always on hand.

TOEPPERWEIN & MAYFIELD

Corner Nolan & Cherry Streets

SAN ANTONIO, TEXAS

ROOT'S BEEKEEPERS SUPPLIES

You may have a catalog of supplies; but if you haven't ours for 1912 you have missed something really worth while, and should get one at once. It is the largest and most complete ever published—more than a mere price list of supplies—a book that every beekeeper can read with pleasure and profit. Beginners will find answers to many perplexing questions, and advanced beekeepers timely suggestions that will save them money. Old customers are writing us frequently letters like the following:

Your catalog for 1912, designated ROOT'S BEEKEEPERS' SUPPLIES, is received, and I certainly thank you for this book. I have had your catalog on my desk for years, and have used Root's supplies all along. I note the enlargement and improvement in your new catalog, and notice many things I expect to add to my apiary.
Crystal City, Texas.

C. W. Cox.

Our catalog this season also gives a full and complete list of books and booklets which we can supply. Many of these booklets are free, which doesn't mean that they are not worth reading, but simply that we want you to be informed on the subjects of which they treat. Send for a catalog, and check those in which you are interested.

Quick Deliveries

Next to having the best goods made, there is nothing so important to the beekeeper in the busy season as to have goods delivered just when they are wanted most. It isn't always possible to ship goods from a distant factory and have them reach destination within a day or two, as is sometimes necessary during the height of the season, but with distributing-houses located in the large shipping-centers we are able to supply beekeepers everywhere, with no loss of time and with minimum transportation charges.

Send Your Hurry Orders

to any one of the offices listed below, and let us show you what we can do for you in point of service. Cars are going to these branches at the rate of two or three a week, so the stocks are new and fresh, and we usually have just what you want. If it isn't in stock at your nearest branch our manager will include your order with his specifications and you may have your goods come in the next car, thereby saving on transportation charges and getting the goods in better shape than you would by local freight.

Whatever You Wants

we can supply you, and, of course, there is no question about the quality of our goods. The name "ROOT" in connection with bee-supplies means the best of every thing in this line, and the best is always the cheapest, as our customers will testify. If you have never used our supplies you should make a trial of them this season. Once used, we are sure you will want no other.

I have just received my goods, order No. 10,739. I am more than pleased with them. I had intended to make my hives, but when I received the sample hive and saw the No. 1 pine lumber from which it was made, and considering the workmanship, I am satisfied I can buy cheaper than I can make them; enough cheaper to save the price of the lumber.

Printype — OLIVER Typewriter

The Only Writing Machine in the World
that Successfully TYPEWRITES PRINT

--17 Cents a Day!

The Printype Oliver Typewriter, which has crowded ten years of typewriter progress into the space of *months*, is now offered to the public for *17 Cents a Day!*

—Offered at the same price as an ordinary typewriter—payable in pennies!

The commanding importance of *Printype* is everywhere conceded.

For who does not see what it means to make the world's vast volume of typewritten matter *as readable as books or magazines!* The Printype Oliver Typewriter is equipped with beautiful Book Type, such as is used on the world's printing presses.

Printype is distinguished by marvelous clearness and beauty. It does away with all strain on eyesight which the old-style *outline* type imposes. Printype puts life and style and character into typewritten correspondence. It makes every letter, every numeral, every character, "*as plain as print.*"

The complete story of *Printype* has never before been told. Here it is:

The Real Story of Printype

The idea from which "*Printype*" sprung resulted from the success of our type experts in equipping a typewriter used in our offices to write "*The Oliver Typewriter*" in our famous trade-mark

type just as the name appears on the outside of the machines and in all Oliver publicity.

The beautiful appearance and the marvelous clearness of the reproduction of our "*ebony*" trade-mark type, disclosed the possibilities of equipping The Oliver Typewriter to *write the entire English language in shaded letters!*

We worked for *years* on the plan and finally succeeded in producing, for exclusive use on The Oliver Typewriter, the wonderful shaded letters and numerals known to the world as "*Printype.*"

The Public's Verdict

That the public is overwhelmingly in favor of *Printype* is impressively shown by this fact;

Already over 75 per cent of our entire output of Oliver Typewriters are "Printypes."

The public is *demanding* *Printype* in preference to the old-style type.

Within a year, at the present rate, *90 per cent of our total sales will be "Printypes."*

Thus the Oliver Typewriter, which first successfully introduced *visible writing*, is *again* to the fore with another revolutionary improvement — *Printype, the type that prints print!*

To Corporations: The Oliver Typewriter is used extensively by great concerns in all sections of the world. Our "*17-Cents-a-Day*" Plan is designed to help that large class of typewriter buyers who want the same typewriter that serves the great corporations, but prefer the easy system of purchase.

The masses want The Oliver Typewriter because it stands the test of the largest corporations.

Meet "Printype"—You'll Like Its Looks

Ask for Specimen Letter and "*17-Cents-a-Day*" Plan.

Make the acquaintance of *Printype*, the reigning favorite of typewriter-dom. Ask for a letter written on The Printype Oliver Typewriter, which will introduce you to this beautiful new type. We will also be pleased to forward the "*17-Cents-a-Day*" Plan on request. Address Sales Department,

HOW TO KEEP BEES!

By Anna Botsford Comstock. A most entertaining and practical book for the beginner. . Tells a beginner's experiences in a way to help other beginners.

PRICE \$1.10 POSTPAID.

The A. I. Root Co., Medina, Ohio

HONEY MARKETS

The prices listed below are intended to represent, as nearly as possible, the average market prices at which honey and beeswax are selling at the time of the report in the city mentioned. Unless otherwise stated, this is the price at which sales are being made by commission merchants or by producers direct to the retail merchant. When sales are made by commission merchants the usual commission (from five to ten per cent), cartage, and freight will be deducted; and in addition there is often a charge for storage by the commission merchant. When sales are made by the producer direct to the retailer, commission and storage and other charges are eliminated. Sales made to wholesale houses are usually about ten per cent less than those to retail merchants.

EASTERN GRADING RULES FOR COMB HONEY.

FANCY.—All sections well filled, combs straight, firmly attached to all four sides, the combs unsoiled by travel-stain or otherwise, all the cells sealed except an occasional one, the outside surface of the wood well scraped of propolis.

A No. 1.—All sections well filled except the row of cells next to the wood; combs straight; one-eighth part of comb surface soiled, or the entire surface slightly soiled; the outside surface of the wood well scraped of propolis.

No. 1.—All sections well filled except the row of cells next to the wood; combs comparatively even; one-eighth part of comb surface soiled, or the entire surface slightly soiled.

No. 2.—Three-fourths of the total surface must be filled and sealed.

No. 3.—Must weigh at least half as much as a full-weight section.

In addition to this the honey is to be classified according to color, using the terms white, amber, and dark; that is, there will be "Fancy white," "No. 1 Dark," etc.

NEW HONEY-GRADING RULES ADOPTED BY THE COLORADO STATE BEEKEEPERS' ASSOCIATION, DECEMBER 13, 1911.

FANCY WHITE.—Sections to be well filled, comb firmly attached on all sides and evenly capped, except the outside row next to the wood. Honey, combs, and cappings white, and not projecting beyond the wood. Wood to be well cleaned; no section in this grade to weigh less than 13½ ounces.

No. 1.—Sections to be well filled, combs firmly attached on all sides and evenly capped, except the outside row next to the wood. Honey white or very light amber; comb and cappings from white to slightly off color. Comb not projecting beyond the wood; wood to be well cleaned; no section in this grade to weigh less than 13½ ounces.

CHOICE.—Sections to be well filled; combs firmly attached, not projecting beyond the wood, and entirely capped, except the outside row next to the wood. Honey, comb, and cappings from white to amber, but not dark. Wood to be well cleaned; no section in this grade to weigh less than twelve ounces.

No. 2.—This grade is composed of sections that are entirely capped, except row next to wood, weighing from ten to twelve ounces, also of such sections that weigh 12 ounces or more, and have not more than 50 uncapped cells all together, which must be filled. Combs and cappings from white to amber in color, but not dark; wood to be well cleaned.

EXTRACTED HONEY.—Must be thoroughly ripened, weigh 12 pounds per gallon. It must be well strained, and packed in new cans. It is classed as white, light amber, and amber.

STRAINED HONEY.—This is honey obtained from combs by all other means except the centrifugal extractors and is classed as white, light amber, amber, and dark; it must be thoroughly ripened and well strained. It may be put up in cans that previously have contained honey.

BOSTON.—New white comb honey, fancy, brings 18 to 20 cts. per lb.; light amber, 16; fancy white extracted, 10 to 11; light, 9 to 10. Beeswax brings 30.

Boston, July 5.

BLAKE-LEE CO.

DENVER.—The old crop of comb honey is all sold, and we expect the first of the new crop by the middle of July if weather conditions are favorable. We have a good stock of very fine extracted honey which we are quoting in a jobbing way at 9 cts. for strictly white; 8 cts. for light amber; 6¾ to 7½ for strained. We pay 26 cts. in cash and 28 in trade per lb. for clean yellow beeswax delivered in Denver.

THE COLORADO HONEY-PRODUCERS' ASSOCIATION.
FRANK RAUCHFUSS, Manager.

Denver, June 21.

ZANESVILLE.—The new crop of comb is just beginning to arrive. Indications are that there will be a fair to good crop generally, which should make prices a little lower than for a year or two past. At present producers are being offered 15 to 16 for fancy; 13 to 15 for No. 1. Inferior grades are practically unsalable on this market. Prices to the trade are, of course, arbitrary as yet. There is a little demand for comb, but the market on extracted is very quiet. For beeswax of good quality, producers are receiving 28 cts. in cash, or 30 in exchange for bee supplies.

Zanesville, O., July 4.

E. W. PEIRCE.

CHICAGO.—At this writing, not any of the honey gathered in 1912 is on the market; yet we judge from advices that, before this goes to print, we shall have some—comb as well as extracted. The prospects are that the quality of the honey this season in this vicinity will be superior to any thing we have had of late years. The flow from clover is of excellent quality, and the lindens are promising an abundance at this writing. No. 1 to fancy white comb honey will bring 17 to 18, with a scaling down on the other grades of from 1 to 3 cts. per lb., while the ambers will range from 13 to 15. Extracted white to fancy will bring from 8 to 9; ambers, 7 to 8. Beeswax brings 30 to 32, according to color and cleanliness.

Comb and Extracted Honey Wanted

Cincinnati, Ohio

SPECIAL DELIVERY

We have anticipated the needs of beekeepers for prompt delivery of supplies during the month of July, and have an unusually large stock from which to draw.

The honey-flow is promising larger than most beekeepers were prepared for, but we have sections and foundation on hand ready for instant shipment, so not a single pound of honey need be lost because of insufficient room in which to store it. Sections of all the standard sizes are here in the original packages, and we can put your name on a package of any size just as soon as your order reaches us.

You will find it will pay you, too, to use foundation liberally this season. Starters are good but full sheets are better, and you can very materially increase your honey crop by giving the bees this little assistance.

We buy honey too, and you will find us ready to give you a good price for your crop, and we can assure you of fair treatment.

Whatever your needs in the beekeeping line, we can supply them promptly, and we are glad to answer questions at any time.

Every Bee-keeper Should Own and Read "The Manual of the Apiary"

By PROF. A. J. COOK

This interesting book is a very complete treatise on bees and bee-keeping, and is particularly valuable where one is interested in the anatomy and physiology of the bee, which has been very completely covered in this work. It is also valuable for its chapter on honey-plants, or bee-botany; 540 pages with good illustrations; bound in cloth. Price, by mail, \$1.15; \$1.00 by express or freight. . . . Order from the author,

A. J. Cook, Pomona College, Claremont, Cal.
Or from Dealers in Bee-supplies Everywhere

BEE CULTURE

Please use coupon below, checking the numbers of items wanted.

The pamphlets and booklets listed below are of more than ordinary interest:

- 1 **My First Season's Experience with the Honey-bee.** By the "Spectator," of the *Outlook*, of New York. A ten-page leaflet detailing the experiences of this well-known writer. You will read the leaflet through before you lay it down. Free.
- 2 **The Bee-keeper and Fruit-grower.** A 15-page booklet giving actual facts regarding the value of bees to fruit, and showing how bee-keeping may be doubly profitable to the fruit-grower. Fruit-growers are realizing as never before the necessity of having honey-bees in close proximity to their blossoming fruit. Free.
- 3 **Bee-keeping for Sedentary Folk.** A 24-page leaflet reciting the actual experiences of an amateur bee-keeper, showing what equipment is best, points derived, etc. Free.
- 4 **Catalog of Bee-keepers' Supplies.** Our complete catalog will be mailed free to any address on request.
- 8 **Habits of the Honey-bee.** By Dr. E. F. Phillips. A somewhat scientific handling of the habits and anatomy of the bee. Price 10 cts.
- 9 **How to Keep Bees.** A book of 228 pages detailing in a most interesting manner the experience of a beginner in such a way as to help other beginners. Price \$1.00 postpaid.
- 10 **The A B C of Bee Culture.** A complete encyclopedia of bees, of 576 pages, fully illustrated, \$1.50 postpaid; half leather, \$2.
- 11 **Cleanings in Bee Culture.** A 64-page illustrated semi-monthly magazine, the leading exponent of bee culture in this country. Ten cents per issue, but to new subscribers we will furnish it six months for 25 cts.
- 12 **Back-yard Bee-keeping.** Six interesting lessons written in readable newspaper style. Many facts to encourage the "City Bound" man or woman with the back-to-the-land longing. Free.
- 15 **Truth About Sweet Clover.** Interesting booklet of nearly 100 pages. Tells of value of sweet clover for honey, for plowing under, as fertilizers of the soil, and food for horses, cattle, swine, sheep, etc. Free.

W. H. Laws

is now mailing queens every day except Sunday. These queens are going to almost every State in the Union. A statement in public print says, "The postoffice at Beeville has probably cancelled more stamps on queen-cages than any other postoffice in the world." Whether this is true or not, it is true that Laws' queens are giving eminent satisfaction, and old customers are continually renewing their orders.

I am breeding but the one strain of three-banded Red-clover Stock Italians. A square deal and good queens are all that I can promise. I shall be pleased to have your order, which will be filled in rotation; however, I can also take care of rush orders.

Prices: Single queen, \$1.00; six for \$5.00; 100, \$75.00.

ADDRESS PLAINLY

GOLDEN ITALIAN QUEENS

75 cts. each; six for \$4.50; twelve for \$8.00.
Untested, warranted, good for black brood.

J. B. CASE, PORT ORANGE, FLA.

ITALIAN AND CARNIOLAN QUEENS!

Nuclei, Bees by Pound. Ten-page descriptive list free. Untested, 75c. Natural R. C. Golden from imported stock, select untested, 90c; tested, \$1.25. Leaflets, "How to Introduce Queens," 15c; "Increase," 15c; or both for 25c.

E. E. MOTT, Glenwood, Mich.

Protection Hive

The best and lowest-priced double-wall hive on the market. This hive has $\frac{3}{4}$ material in the outer wall, and is not cheaply made of $\frac{3}{8}$ material as are some other hives on the market. Send for circular showing 12 large illustrations. It will pay to investigate.

Bingham Smokers

Insist on "Old Reliable" Bingham Smokers, for sale by all dealers in beekeepers' supplies. For over 30 years the standard in all countries. The smoker with a valve in the bellows, direct draft, bent cap, inverted bellows, and soot-burning device.

Smoker engine, 4-inch, each, \$1.25; mail, \$1.50.

Doctor, $\frac{3}{4}$ -inch, each, .85; mail, \$1.10.

Conqueror, 3-inch, each, .75; mail, \$1.00.

Little Wonder, 2-inch, each, .50; mail, .65.

Honey-knife, .70; mail, .80.

"If goods are wanted quick, send to Pouder."

(Twenty-third year.)

BEE-SUPPLIES

Hives, sections, foundation, smokers, veils, extractors, and every thing required in an up-to-date apiary, and superior quality; shipped without delay, and they reach you without that dreadful annoyance of waiting a long time to have your order filled.

These features of promptness and quality have been my hobby for many years; and if you will give this house one trial I shall have no fear about your sending your next order elsewhere.

If you are interested in yellow Italian queens of the gentle strain, and hustlers for honey, I can please you. If you are interested in paper honey-jars or glass jars or tin pails for extracted honey I should like to figure with you. My glass jars do not drip or become soiled with honey, and my paper honey-jars are cheap enough to give away with the honey.

Veedersburg, Ind., June 8, 1912.

WALTER S. POWDER.

Dear Sir:—I wish to thank you for your prompt shipment of goods ordered the other day. They were brought to my house before I thought you had time to make up the order, and you well deserve your motto, "If goods are wanted quick, send to Pouder." I inclose another order which I will be glad to have you send as quickly.

Yours truly, JAMES J. LYNCH.

I can use more beeswax, cash or trade, and you will find me prompt with returns.

My catalog free for the asking.

WALTER S. POWDER, Indianapolis, Ind.

359 Massachusetts Ave.

We Buy Honey

If you have a large crop with no local market for the same, let us handle it for you. We buy in any quantity, large or small, and can assure you of satisfactory treatment. Send a good sample, and be sure that you tell us just how your honey is put up, and how much you have. Do not ship any honey to us without instructions, but wait until you have heard from your sample. We will offer a definite price, and give you shipping instructions.

Cans

We still have a good stock of cans, and can make instant shipment of anything in this line. Good cans and shipping cases are an absolute necessity if you would get the best prices for your honey. Even the best honey put up in poor containers will be graded as second class, and honey that in itself isn't the very best will often bring a very fair price if attractively put up.

Write us for information or advice on any beekeeping subject, and your letters will have careful attention.

A full line of Root's supplies always on hand.

SAN ANTONIO, TEXAS**

Root's Section-Honey Boxes!

THERE have been very few years when the outlook for a bumper honey crop has been brighter than it is now—at the opening of the season of 1912. Every indication points to an almost unprecedented honey-flow, and the bee-keeper who is not making most complete preparations to reap the harvest will not be very well satisfied with himself when the surplus has all been taken off this fall, or when he knows a big flow is on and he has no sections to put on his hives.

Of course the section problem is the most important one to the comb-honey man, and it **MUST** be solved right. Therefore why take risks? Why run the slightest chance of getting sections of uncertain quality, or experimenting at a price you can not afford to pay? We are the largest manufacturers of Section-honey Boxes in the world—naturally we have the finest equipment for section-making, and cut up the best lumber. We are in close touch with every phase of bee-keeping—with every department of the honey trade—therefore we know the service sections are required to give, and we make **ROOT'S SECTION-HONEY BOXES** to meet these requirements. Years of experience and satisfied section patrons throughout the world ought to count; and you, Mr. BEEKEEPER, if you will buy **ROOT'S SECTIONS**, will understand why.

PRICE LIST OF SECTIONS

4¼x4¼ Beeway Sections—2 inch, 1½, 1¾, 1¾, or 7 to foot wide.

We send 1¾ style 2 beeway when your order does not specify style or width wanted.

No.	A	B	Weight
100	\$.80	\$.70	7 lbs.
250	1.60	1.40	18 "
500	2.75	2.50	35 "

C. B. BANKSTON, Buffalo, Leon Co., Texas.

Golden Italian queens that are golden to the tip, that will produce golden workers, hardy, and honey-gatherers, that I have worked 15 years to produce, and which will please all who try them. My mating should run up to 90 per cent pure or better. Queens from \$1.00 to \$20.00. Send for booklet. No orders booked by return mail until August 1.
GEO. M. STEELE, 30 S. 40th St., Philadelphia, Pa.

QUEENS AND ½-lb. packages. A strain of three-banded Italian honey-gatherers now ready for you. None better, none cheaper. Untested Italian queens, 50 cts. each; half-pound of bees with untested queen, \$1.75. Safe arrival and satisfaction guaranteed.
W. D. ACHORD, Fitzpatrick, Ala.

D. S. Jenkins writes: "I got more bees in half-pound package from you than out of one-pound packages from others, and your queens would be laying next morning after released; and the other fellow's queens it would take some of them four days to commence. You have treated me right."

Curd Walker's strain of red-clover Italian bees have come to the front to stay; very gentle, great honey-gatherers. Prices, untested queens, \$1.00; 6 for \$5.00; tested, \$1.50 each; breeders, \$5.00 to \$10.00 each.
CURD WALKER, Queen-breeder, Rt 1, Bpx 18, Jellico, Tenn.

Our golden Italian queens produce the brightest and gentlest golden bees that we ever had; great honey-gatherers, and not bad robbers. Our three-band are the best of their kind. Price of either, untested, \$1.00; tested, \$2.00; breeders, \$3.00. We will make a very low price later in the season.

C. W. PHELPS & SON,
Dealers in beekeepers' supplies, Binghamton, N. Y.

FOR SALE.—Italian queens, bred from the best honey-gathering strains obtainable. Untested, 75 cts.; select, \$1.00; tested, \$1.25; select tested, \$1.50. Nuclei without queen, one frame, \$1.50; two-frame, \$2.00; three-frame, \$2.75. For queens and nuclei in quantity lots, and bees by the pound, write for prices and circular. Virgin queens from my best breeders, 40 cts. each; three for \$1.00.

ROBT. B. SPICER, Wharton, N. J.

Queens reared scientifically from breeders perfected by years of elimination of all undesirable traits; are far better and more prolific than the ones hatched from a natural swarm or supersedure cells. We have the famous Moore strain of Italians, and are giving every care to the perfection of cells and mating. We have never had any disease in or near our apiary. If you are interested, write us. Untested queens, 75 cts.; dozen, \$8.00.

WALLIN & CORLIS, Brooksville, Ky.

FOR SALE.—North Carolina bred Italian queens, bred up for business; none better for honey-gathering; good recommendations coming in almost every day. I have Root's and Moore's strain, Davis, Quirin's, Laws', and choice imported breeders, to get my fine honey-gathering strain from. I breed all queens in full two-story colonies running over with bees at all times. I don't keep any thing but the red clover and the Golden in my yards. Try them and see for yourself. Untested, 75 cts.; doz., \$7.00; tested, \$1.25; select tested, \$1.50; extra select tested, \$2.00; select breeders, \$3.00; extra select, \$5.00.

H. B. MURRAY, Liberty, N. C.

POULTRY

WHITE ORPINGTONS.—Fine healthy young stock for sale. Eggs and baby chicks from prize stock.
PIPER'S POULTRY PLANT, Elkville, Ill.

Strictly fresh eggs, direct from our own poultry-yards, in both white and brown color. Also laying pullets. Illustrated catalog free. Write to

TAYLOR'S POULTRY YARDS,
(Sales Department.) Lyons, N. Y.

PIGEONS

PIGEONS, PIGEONS.—Heavy squab-breeding, Car-neaux homers, runts; also a few fancy pigeons; not the cheapest but the best. Write your wants.

WM. E. CHADWICK, Morristown, N. Y.

REAL ESTATE

Sale, or five-year lease, 160-acre farm, twelve acres cultivated; the rest heavy timber; bees, cows, cannery. Full information on application.

ALFRED WALLACE, Mt. Ida, Ark.

HELP WANTED

WANTED.—Experienced apiarist on isolated ranch; beautiful country, in Santa Barbara County, Cal. Salary or shares. Box 132, Santa Barbara.

MRS. H. SEDEBOTHAM.

WANTED.—Assistant beekeeper immediately; give age, experience, and wages for balance of season, probably three months.

THE ROCKY MOUNTAIN BEE Co., Forsyth, Mont.

BEEKEEPERS' DIRECTORY

Nutmeg Italian queens, leather color, after June 1, \$1.00. A. W. YATES, Hartford, Ct.

Well-bred bees and queens. Hives and supplies. J. H. M. COOK, 70 Cortlandt St., New York.

Improved golden-yellow Italian queens for 1912; beautiful, hustling, gentle workers. Send for price list to E. E. LAWRENCE, Doniphan, Mo.

QUEENS.—Improved red-clover Italians, bred for business; June 1 to Nov. 15, untested queens, 75 cts.; select, \$1.00; tested, \$1.25 each. Safe arrival and satisfaction guaranteed.

H. C. CLEMONS, Boyd, Ky.

QUIRIN'S famous improved Italian queens nuclei, colonies, and bees by the pound, ready in May. Our stock is northern-bred and hardy; five yards wintered on summer stands in 1908 and 1909 without a single loss. For prices, send for circular.

QUIRIN-THE-QUEEN-BREEDER, Bellevue, O.

Honey Reports continued from page 2.

INDIANAPOLIS.—No arrivals of new honey at this date. Best extracted honey sells at 11 to 12 in five-gallon cans. Several cars of comb honey arrived here during March, and much remains unsold in jobbing houses, and no stable prices can be named on comb honey at this writing. Beeswax is in good demand, and producers are being paid 30 cents per pound.

WALTER S. POWDER.

Indianapolis, Ind., July 3.

ST. LOUIS.—So far we have not received any shipments of new honey, and the market is entirely bare. There is, however, no demand for it to speak of at the present time, and the quotations are nominal. Shipments of new Southern honey, in barrels, are arriving, and the best light-amber honey is sold at 7½. There is a good demand for it. We quote fancy white comb honey at 16 to 17; No. 1 white at 15 to 16; light amber, 13 to 14; dark, 8 to 11; broken and leaking honey sells at much less. Extracted, none on the market. Southern in barrels, 7½; in five-gallon cans, 8 to 8½. Dark and inferior will bring less. Beeswax is in good demand. Prime brings 30 cents. Inferior and impure less.

St. Louis, July 5. R. HARTMANN PRODUCE Co.

LIVERPOOL.—During the past fortnight we have had a slow demand. At auction yesterday 74 barrels of Chilean honey were offered; and, there being no competition, sellers withdrew the lot with \$7.68 bid for pile X and \$7.20 for pile I. There is a good inquiry for Chilean for direct shipment to the Continent. Lately \$6.22 c. i. f. was bid for 400 barrels; but at the moment sellers can not put through the business. Other descriptions have sold at different quotations: Haitian, \$5.76 to \$7.20; Peruvian, \$3.84 to \$4.80; Chilean, \$5.52 to \$8.16; Jamaican, \$6.22 to \$7.68; Californian, \$9.60 to \$10.92. Californian, retail sales at steady prices. Beeswax is in good demand. Forty sacks of Chilean sold at \$37.18 to \$39.62; 3 cases Peruvian at \$38.38 to \$40.22 per cwt. Other descriptions are quoted as follows: African, \$32.16 to \$34.48; Jamaican, \$37.72; West Indies, \$32.64 to \$33.28.

Liverpool, June 28.

TAYLOR & Co.

SPECIAL NOTICES

BY OUR BUSINESS MANAGER

We have about one hundred colonies of very fine bees in Danzenbaker hives at our Philadelphia office, which we offer at \$9.00 per colony plus the price of any grade of queen selected. They will be sent in new hives, and are ready for instant shipment. There is no hive better than the Danzenbaker for the production of fancy comb honey, and this is an exceptional opportunity to get some fine stock at a nominal price.

SPECIAL NOTICES

A. I. ROOT

NOSTRUMS AND QUACKERY.

I hold in my hand a most valuable book bearing the above title. It has over 500 pages and 200 illustrations, and treats in detail pretty nearly all the humbug medicines advertised in our daily papers, and kept on the shelves of many drugstores. Right in the middle of the book a dozen pages are devoted to electropoise, oxydator, oxygenor, oxygenator, and oxytanor, etc. It contains a history of this shameless fraud almost from its beginning, 25 years ago, when it started up. It is indeed a shame and disgrace to our nation and to the present age that this thing has been allowed to go on, robbing sick people by means of a senseless toy or plaything for upward of 25 years. This book tells us that the venders were making so much money out of it that they had various imitators, and really had the cheek to announce a prosecution of those imitators. The courts, however, quickly decided that they could not well take up the case of a counterfeiter when the original was already itself a fraud on humanity. They describe it under the head of what they call "gaspipe therapy," for it is really only a short piece of pipe with a cord or wire attached. Sometimes this gaspipe is entirely empty, and at other times they put in sulphur, sal-ammoniac, or, when it comes handy, just the dust and sweepings from the floor. Of course, *cures* have sometimes resulted from the use of this humbug toy, and I believe the makers themselves admit in their patent claims that it is a device for working on the imagination of their patients, like a horseshoe nailed over the door, etc. Well, now, this book of 500 pages holds up in the limelight of science and good sense a host of cure-alls — cancer cures, consumption cures, asthma cures, "baby-killers" (Mrs. Winslow's soothing syrup), vita-ore, cough medicines that contain opium, headache cures, with accounts of a number of deaths that have resulted from their use; Warner's Safe Cure, catarrh cures, rheumatism cures, and a hundred others.

I suppose that most of you are aware that the pure-food commission has stopped a great number of these so-called remedies. They relate ever so many instances of medicines costing \$1.00 a bottle or more that contain only a few cents' worth of medicine; and a good many times the bottle contained nothing at all as a recognized remedy for the disease it claimed to cure. Our older readers may remember my fight against electric belts, which, like electro-

poise, had no electricity in them at all, and worked simply on the imagination. I am glad to see that electric belts are now pretty much out of date, and to know that the pure-food law of at least one State (Massachusetts) is prohibiting the sale of electropoise in that State. When examined by a chemist he pronounced it "a tube filled with black powder which is a mere mixture of inert substances."

The price of this valuable book is only \$1.00 postpaid, and it would save *many dollars* in most families, especially those that are in the habit of spending their money for *much-advertised* quackery.

Address American Medical Association, 535 Dearborn Ave., Chicago, Ill.

Since the above was dictated I have learned of a lady near by who spent *over \$150* (and finally decided that it was of no benefit) in patronizing one of the so-called "medical institutions" shown up in this book.

MASSACHUSETTS SOCIETY OF BEEKEEPERS.

The annual field-day meeting will be held at Hill Crest Apiaries, home of Mr. Fred C. Howard, Wakefield, Mass., Saturday, August 3, 1912. The following is the program:

11:30 to 12:30. Social hour.

12:30 to 1:30. Basket lunch.

1:30. Meeting called to order by President E. Clinton Britton. Business session; action on new members; unfinished business.

2:15. Professor Burton N. Gates, Inspector of Apiaries of Massachusetts, will speak on "Bees in Massachusetts, Season of 1912."

3:10. A swarm of bees will leave a hive, under President Britton's direction. Musical selections.

Mr. Wilfred Wheeler, of Concord, Mass., Expert Orchardist, will speak on small fruit.

Mrs. Susan E. Howard will transfer a hive of bees from an old box hive into a movable-frame hive.

Vice-president Shaw will show and explain some of his recent inventions.

Accommodations. Trains leave North Station, Boston, for Wakefield at 10:15, 10:55, 11:50, and 12:50 A. M., and return 4:07, 4:43, and 5:14 P. M. Cars leave Sullivan Square, Lower Level, Fellsway Spot Pond car, transfer at Stoneham for Wakefield. Bring basket lunch. Hot coffee donated by society.

All interested in bee culture are cordially invited to attend.

T. J. HAWKINS, Secretary.

4 Emery Street, Everett, Mass.

THE WATER WAY BETWEEN DETROIT AND BUFFALO. DAILY EXPRESS SERVICE VIA D. & C. LAKE LINE.

Particular and experienced travelers habitually use the D. & C. Line en route between eastern and western States. Low rates and superior service attracts this class of travel. You can save \$3.00 by purchasing your through tickets via the D. & C. Line. Send two-cent stamp for illustrated pamphlet. Address Detroit & Cleveland Navigation Co., 4 Wayne St., Detroit, Mich.

When Ordering Supplies

The 1912 Sensation

By R. E. Olds, Designer

Five Times Oversold in May

I have built automobiles for 25 years. Reo the Fifth is my 24th model.

I have watched all the ups and downs of Motordom—all the comings and goings, the successes and failures.

But I never saw a demand like that which developed for Reo the Fifth this year. In April and May we could easily have sold five times our factory output.

My Final Car

Month after month I have told you the story, so you know why this call has come.

I built this car as my final creation, as the cap-sheaf of my career.

In this car I embodied the best I had learned from 25 years of car building.

This car marked my limit. Every detail showed the best I knew.

I analyzed all steel that went into it. I tested the gears in a crushing machine with 50 tons' capacity.

I used Nickel Steel axles—Vanadium Steel connections. I equipped the car with 15 roller bearings.

To every part I gave big margins of safety. The carburetor I doubly heated for low-grade gasoline.

I Watched It

Then I took personal charge of the building, for I pledged my good faith on this car.

I saw that the parts were ground over

and over, until we got utter exactness. I saw that each car got a thousand inspections.

The engines were tested for 48 hours.

Each finished car was tested over and over, until it proved utterly perfect.

We did all this with every car, in the

midst of the April rush. We do it to-day, and shall always do it so long as I build this car.

The Center Control

Then we equipped this car with my new center control. All the gear shifting is done by a small, round lever between the two front seats. It is done by moving this lever only three inches in each of four directions.

I got rid of all side levers, so the front

doors were clear. Both brakes are operated by foot pedals.

In these ways I made possible the left-side drive.

Now nearly all makers announce for next season the center control and the left-side drive. But none can use my center control. They still use the old time levers.

The Amazing Price

Then we offered this car—the best I can build—for \$1,055. And nothing on the market could begin to compete with it.

The car is long, roomy, and powerful. The wheels are big. The body is finished in 17 coats. The upholstering is the height of luxury.

The demand for this car will grow and grow as the facts become better known. I believe that each car will sell twenty.

But the price of \$1,055 can't last long. The price is too low for profit, and materials are advancing. Before very long advancing costs will compel us to ask something more for this car.

1000 Dealers

Reo the Fifth is shown by dealers in a thousand towns. If you will write for our

catalog, showing the various styles of body, we will tell you where to see the car.

Printype — OLIVER Typewriter

The Only Writing Machine in the World
that Successfully TYPEWRITES PRINT

--17 Cents a Day!

The Printype Oliver Typewriter, which has crowded ten years of typewriter progress into the space of *months*, is now offered to the public for *17 Cents a Day!*

—Offered at the same price as an *ordinary* typewriter—*payable in pennies!*

The commanding importance of *Printype* is everywhere conceded.

For who does not see what it means to make the world's vast volume of typewritten matter as *readable as books or magazines!* The Printype Oliver Typewriter is equipped with beautiful Book Type, such as is used on the world's *printing presses*.

Printype is distinguished by marvelous clearness and beauty. It does away with all strain on eyesight which the old-style *outline* type imposes. Printype puts life and style and *character* into typewritten correspondence. It makes every letter, every numeral, every character, "*as plain as print*."

The complete story of *Printype* has never before been told. Here it is:

The Real Story of Printype

The idea from which "Printype" sprung resulted from the success of our type experts in equipping a typewriter used in our offices to write "The Oliver Typewriter" in our famous trade-mark

type just as the name appears on the outside of the machines and in all Oliver publicity.

The beautiful appearance and the marvelous clearness of the reproduction of our "ebony" trade-mark type disclosed the possibilities of equipping The Oliver Typewriter to *write the entire English language in shaded letters!*

We worked for *years* on the plan and finally succeeded in producing, for exclusive use on The Oliver Typewriter, the wonderful shaded letters and numerals known to the world as "Printype."

The Public's Verdict

That the public is overwhelmingly in favor of Printype is impressively shown by this fact;

Already over 75 per cent of our entire output of Oliver Typewriters are "Printypes."

The public is *demanding* Printype in preference to the old-style type.

Within a year, at the present rate, *90 per cent of our total sales will be "Printypes."*

Thus the Oliver Typewriter, which first successfully introduced *visible writing*, is again to the fore with another revolutionary improvement — *Printype the type that prints print!*

To Corporations: The Oliver Typewriter is used extensively by great concerns in all sections of the world. Our "17-Cents-a-Day" Plan is designed to help that large class of typewriter buyers who want the same typewriter that serves the great corporations, but prefer the easy system of purchase. The masses want The Oliver Typewriter because it stands the test of the largest corporations.

Meet "Printype"—You'll Like Its Looks

Ask for Specimen Letter and "17-Cents-a-Day" Plan.

Make the acquaintance of Printype, the reigning favorite of typewriter-dom. Ask for a letter written on The Printype Oliver Typewriter, which will introduce you to this beautiful new type. We will also be pleased to forward the "17-Cents-a-Day" Plan on request. Address Sales Department,

Gleanings in Bee Culture

VOL. XL AUGUST 1, 1912, NO. 15.

ROOT'S BEEKEEPERS SUPPLIES

You may have a catalog of supplies; but if you haven't ours for 1912 you have missed something really worth while, and should get one at once. It is the largest and most complete ever published—more than a mere price list of supplies—a book that every beekeeper can read with pleasure and profit. Beginners will find answers to many perplexing questions, and advanced beekeepers timely suggestions that will save them money. Old customers are writing us frequently letters like the following:

Your catalog for 1912, designated ROOT'S BEEKEEPERS' SUPPLIES, is received, and I certainly thank you for this book. I have had your catalog on my desk for years, and have used Root's supplies all along. I note the enlargement and improvement in your new catalog, and notice many things I expect to add to my apiary.
C. W. Cox.

Our catalog this season also gives a full and complete list of books and booklets which we can supply. Many of these booklets are free, which doesn't mean that they are not worth reading, but simply that we want you to be informed on the subjects of which they treat. Send for a catalog, and check those in which you are interested.

Quick Deliveries

Next to having the best goods made, there is nothing so important to the beekeeper in the busy season as to have goods delivered just when they are wanted most. It isn't always possible to ship goods from a distant factory and have them reach destination within a day or two, as is sometimes necessary during the height of the season, but with distributing-houses located in the large shipping-centers we are able to supply beekeepers everywhere, with no loss of time and with minimum transportation charges.

Send Your Hurry Orders

to any one of the offices listed below, and let us show you what we can do for you in point of service. Cars are going to these branches at the rate of two or three a week, so the stocks are new and fresh, and we usually have just what you want. If it isn't in stock at your nearest branch our manager will include your order with his specifications and you may have your goods come in the next car, thereby saving on transportation charges and getting the goods in better shape than you would by local freight.

Whatever Your Wants

we can supply you, and, of course, there is no question about the quality of our goods. The name "Root" in connection with bee-supplies means the best of every thing in this line, and the best is always the cheapest, as our customers will testify. If you have never used our supplies you should make a trial of them this season. Once used, we are sure you will want no other.

I have just received my goods, order No. 10739. I am more than pleased with them. I had intended to make my hives, but when I received the sample hive and saw the No. 1 pine lumber from which it was made, and considering the workmanship, I am satisfied I can buy cheaper than I can make them; enough cheaper to save the price of the lumber.

HONEY MARKETS

The prices listed below are intended to represent, as nearly as possible, the average market prices at which honey and beeswax are selling at the time of the report in the city mentioned. Unless otherwise stated, this is the price at which sales are being made by commission merchants or by producers direct to the retail merchant. When sales are made by commission merchants the usual commission (from five to ten per cent), cartage, and freight will be deducted; and in addition there is often a charge for storing by the commission merchant. When sales are made by the producer direct to the retailer, commission and storage and other charges are eliminated. Sales made to wholesale houses are usually about ten per cent less than those to retail merchants.

EASTERN GRADING RULES FOR COMB HONEY.

FANCY.—All sections well filled, combs straight, firmly attached to all four sides, the combs unsoiled by travel-stain or otherwise, all the cells sealed except an occasional one, the outside surface of the wood well scraped of propolis.

A No. 1.—All sections well filled except the row of cells next to the wood; combs straight; one-eighth part of comb surface soiled, or the entire surface slightly soiled; the outside surface of the wood well scraped of propolis.

No. 1.—All sections well filled except the row of cells next to the wood; combs comparatively even; one-eighth part of the comb surface soiled, or the entire surface slightly soiled.

No. 2.—Three-fourths of the total surface must be filled and sealed.

No. 3.—Must weigh at least half as much as a full-weight section.

In addition to this the honey is to be classified according to color, using the terms white, amber, and dark; that is, there will be "Fancy white," "No. 1 dark," etc.

NEW HONEY-GRADING RULES ADOPTED BY THE COLORADO STATE BEEKEEPERS' ASSOCIATION, DECEMBER 13, 1911.

FANCY WHITE.—Sections to be well filled, comb firmly attached on all sides and evenly capped, except the outside row next to the wood. Honey, combs, and cappings white, and not projecting beyond the wood. Wood to be well cleaned; no section in this grade to weigh less than 13½ ounces.

No. 1.—Sections to be well filled, combs firmly attached on all sides and evenly capped, except the outside row next to the wood. Honey white or very light amber; comb and cappings from white to slightly off color. Comb not projecting beyond the wood; wood to be well cleaned; no section in this grade to weigh less than 13½ ounces.

CHOICE.—Sections to be well filled; combs firmly attached; not projecting beyond the wood, and entirely capped, except the outside row next to the wood. Honey, comb, and cappings from white to amber, but not dark; wood to be well cleaned; no section in this grade to weigh less than 12 ounces.

No. 2.—This grade is composed of sections that are entirely capped, except row next to wood, weigh-

ing from ten to twelve ounces, also of such sections that weigh 12 ounces or more, and have not more than 50 uncapped cells all together, which must be filled. Combs and cappings from white to amber in color, but not dark; wood to be well cleaned.

EXTRACTED HONEY.—Must be thoroughly ripened; weigh 12 pounds per gallon. It must be well strained, and packed in new cans. It is classed as white, light amber, and amber.

STRAINED HONEY.—This is honey obtained from combs by all other means except the centrifugal extractors, and is classed as white, light amber, amber, and dark; it must be thoroughly ripened and well strained. It may be put up in cans that previously have contained honey.

KANSAS CITY.—New comb honey is arriving on the market, No. 1 white selling at \$3.50 per case of 24 sections; last year's extracted, 7 to 7½ for amber; 8 to 8½ for white. Beeswax at 25 and 28.

C. C. CLEMONS PRODUCE CO.

Kansas City, Mo., July 15.

SAN FRANCISCO.—The demand for comb honey is still beyond the supply, and extracted honey has been moving too. Water-white comb brings 15 to 16 cts. per lb.; water-white extracted, 8½ to 9; light amber, 7½ to 8; amber, 6½ to 7; lower grades at 5 to 6. Beeswax is 26 to 30 for nice yellow, and 24 to 26 for the darker grades, f. o. b. San Francisco or Berkeley.

San Francisco, July 16. J. C. FROHLIGER.

CHICAGO.—The yield of 1912 has been coming on the market this month, and the best grades of white comb have been bringing 17 to 18 cts. per lb., and has sold readily. The quality, when we consider flavor, is superior to that of the recent past seasons, and we look for a good trade. Extracted white is bringing 9 to 10, and the ambers 7 to 8. Beeswax market is without change, selling readily at from 30 to 32, according to color and cleanliness.

R. A. BURNETT & CO.

Chicago, Ills., July 17.

NEW YORK.—There is no new crop of New York State or near-by comb honey on the market as yet, and we do not expect to have any before about ten days or two weeks. From reports we have so far received, it is expected that a good fair crop of white clover has been gathered, with probably a crop of basswood to follow, if weather is favorable. There are no prices established as yet, and probably will not be for two weeks to come. Extracted honey is in fair demand, even in spite of the fact that there will be very little or no white sage in California. We think there will be enough white clover and basswood in the East and middle West to offset the shortage of sage in California. No fixed values are established for the new crop of basswood and clover and others; but we think that prices will rule about the same as last year—at least early in the season. Nothing can be said as yet as to the buckwheat crop; but we have learned that quite large fields have been sown; and with favorable weather we see no reason why a good crop should not be produced. Beeswax is quiet at 30 to 31 cts.

New York, July 17. HILDBRETH & SEGELKEN.

SURE, OLD COMBS ARE VALUABLE

IF shipped to us for rendering. . . WE EXTRACT 99½ per cent OF WAX, and then pay you Highest Market Prices, or 2 cents additional in trade. . . YOU CAN'T APPROACH THAT FOR PROFIT. . . We need great quantities of Comb and Extracted Honey. . . Write us.

THE FRED W. MUTH CO.

"The Busy Bee Men"

51 Walnut Street

Cincinnati, Ohio

SPECIAL DELIVERY

We have anticipated the needs of beekeepers for prompt delivery of supplies during the month of July, and have an unusually large stock from which to draw.

The honey-flow is promising larger than most beekeepers were prepared for, but we have sections and foundation on hand ready for instant shipment, so not a single pound of honey need be lost because of insufficient room in which to store it. Sections of all the standard sizes are here in the original packages, and we can put your name on a package of any size just as soon as your order reaches us.

You will find it will pay you, too, to use foundation liberally this season. Starters are good but full sheets are better, and you can very materially increase your honey crop by giving the bees this little assistance.

We buy honey too, and you will find us ready to give you a good price for your crop, and we can assure you of fair treatment.

Whatever your needs in the beekeeping line, we can supply them promptly, and we are glad to answer questions at any time.

Honey Reports continued from page 2.

BOSTON.—Fancy and No. 1 white comb brings 17 to 18; white extracted, 10 to 11; light amber, 9 to 10. Beeswax, 30.

Boston, July 20. BLAKE-LEE CO.

SCHENECTADY.—No arrivals of this season's production of comb or extracted honey are on our market as yet, although several producers have written they would soon have some ready to ship. There will be no great demand during August, on account of hot weather and flies, which are attracted by sweets of all sorts.

Schenectady, N. Y., July 12. CHAS. MACCULLOCH.

INDIANAPOLIS.—New extracted honey of finest quality is now moving and selling at 10½ to 12 cts. per lb. in five-gallon cans, according to quantity. New comb honey is not yet moving, and considerable old crop is still on market at sacrifice prices. Beeswax is in good demand, and producers are being paid 30 cts. per lb.

Indianapolis, Ind., July 16. WALTER S. POWDER.

BUFFALO.—There is so little doing in honey that there is hardly any established price. Old comb is all cleaned up. New is just commencing to come, selling slowly at 17 to 18 for No. 1 to fancy white comb; probably will sell slow for a month or two, for honey sells slow in this market during berry season and hot weather. I think prospects are pretty good for considerable honey this season. The quality seems very good.

Buffalo, N. Y., July 19. W. C. TOWNSEND.

CINCINNATI.—There is still some comb honey in the market, but with very little demand. New comb honey has not yet arrived, and the price will be lower than last season, as there is a good crop in general. Water-white extracted in 60-lb. cans is selling at from 9 to 9½ cts., according to quantity; light amber in barrels, from 6½ to 7½; in cans, from 8 to 8½. Beeswax is selling at \$33.00 per 100. The above are selling prices, not what we are paying.

Cincinnati O., July 18. C. H. W. WEBER & Co.

ST. LOUIS.—The situation in the honey market is unchanged since our last, of July 5. There are no receipts of new comb honey. The receipts of extracted honey in barrels are liberal, and for choice light amber 7 cts. is the price established at this time. Dark will bring 6 to 6½ cts. Same grade is quoted at one-half cent higher in five-gallon cans. We omit quotations on comb honey, as none is on the market. Beeswax is in good demand at 30 cts. Inferior and impure, less.

St. Louis, July 12. R. HARTMANN PRODUCE CO.

ZANESVILLE.—Arrivals of new honey are very meager as yet; but more offerings are anticipated from now on, as a fair to good crop seems to be the general report. While wholesale prices are still firm, a decline in price is looked for. At present, producers are offered 15 to 16 for fancy, and 13 to 15 for No. 1 white clover, which are the grades this market most demands. The market on extracted is quiet. For best quality white, producers would receive about 8 cts. For beeswax, 28 cash or 30 in trade is being paid producers. Wholesale quotations, 35 cts. up, according to quality.

Zanesville, O., July 17. E. W. PEIRCE.

CINCINNATI.—At this writing we have received several shipments of new comb honey. However, owing to the heavy crop reported everywhere, also noting that several cities have unsold comb honey from last year, the demand is not up to our expectations by far. For this reason conditions must be looked into, and a range of prices is necessary in order to open up the season and enliven the buyers. The little comb honey that is moving we are selling at 13 to 16 cts. per lb.; and fancy extracted at 8½ to 10, according to the quality a quantity purchased. Amber honey in barrels we are selling at from 6½ to 7½. The above are selling prices. For strictly choice bright-yellow beeswax we are paying 28 cts per lb. in cash, or 30 in trade.

Cincinnati, July 15. THE FRED W. MUTH CO.

PUBLICATIONS ON BEE CULTURE

Please use coupon below, checking the numbers of items wanted.

The pamphlets and booklets listed below are of more than ordinary interest:

- 1 **My First Season's Experience with the Honey-bee.** By the "Spectator," of the *Outlook*, of New York. A ten-page leaflet detailing the experiences of this well-known writer. You will read the leaflet through before you lay it down. Free.
- 2 **The Bee-keeper and Fruit-grower.** A 15-page booklet, giving actual facts regarding the value of bees to fruit, and showing how bee-keeping may be doubly profitable to the fruit-grower. Fruit-growers are realizing as never before the necessity of having honey-bees in close proximity to their blossoming fruit. Free.
- 3 **Bee-keeping for Sedentary Folk.** A 24-page booklet reciting the actual experiences of an amateur bee-keeper, showing what equipment is best, points derived, etc. Free.
- 4 **Catalog of Bee-keepers' Supplies.** Our complete catalog will be mailed free to any address on request.
- 8 **Habits of the Honey-bee.** By Dr. E. F. Phillips. A somewhat scientific handling of the habits and anatomy of the bee. Price 10 cts.
- 9 **How to Keep Bees.** A book of 228 pages detailing in a most interesting manner the experience of a beginner in such a way as to help other beginners. Price \$1.00 postpaid.
- 10 **The A B C of Bee Culture.** A complete encyclopedia of bees, of 576 pages, fully illustrated, \$1.50 postpaid; half leather, \$2.
- 11 **Cleanings in Bee Culture.** A 64-page illustrated semi-monthly magazine, the leading exponent of bee culture in this country. Ten cents per issue, but to new subscribers we will furnish it six months for 25 cts.
- 12 **Back-yard Bee-keeping.** Six interesting lessons written in readable newspaper style. Many facts to encourage the "City Bound" man or woman with the back-to-the-land longing. Free.
- 15 **Truth About Sweet Clover.** Interesting booklet of nearly 100 pages. Tells of value of sweet clover for honey, for plowing under, as fertilizers of the soil, and food for horses, cattle, swine, sheep, etc. Free.

The coupon below may be used as an order sheet by properly checking the numbers of items wanted and adding your signature and remittance, if required.

LEARN BEEKEEPING from the Beginning

"First Lessons In Beekeeping" and the American Bee Journal, one year, Both for Only **\$1.00**

"First Lessons In Beekeeping" is a 190-page book telling all that the beginner need know. . . . It has an attractive paper cover, and many illustrations.

"Doolittle's Scientific Queen-rearing," and the American Bee Journal, one year, Both for Only **\$1.00**

Doolittle's "Scientific Queen-rearing" book contains 126 pages, and is bound in leatherette with round corners. It tells in the clearest way possible just how the famous queen-breeder, Mr. G. M. Doolittle, rears the best of queen bees in perfect accord with Nature's way. As all know, Mr. Doolittle has spent some 40 years in rearing queens and producing honey. He has no superior as a queen-breeder. You can learn to rear fine queens by following his directions.

The beginner will want "First Lessons;" the older beekeeper should have "Scientific Queen-rearing." You will not regret it if you send your \$1.00 now and get either one of these books with the JOURNAL, as the JOURNAL itself is worth more than the total cost.

AMERICAN BEE JOURNAL, . . . HAMILTON, ILLINOIS

New Stock

We already have received a large well-assorted stock of fine supplies for the coming season. We carry no dead or out-of-date stock in our warehouse. You can be sure of getting fresh, clean stock if you order of us.

CATALOGS: Our new catalogs are now ready. Those who have received them say they are the finest bee-supply catalogs ever put out. If you have not already received a copy, send for it.

The A. I. Root Company
Medina, Ohio

READ THE CATALOG!

Has it ever occurred to you how valuable a source of information, alike for the prospective beekeeper, the beginner, and the veteran, a modern bee-supply catalog is? A careful perusal of one of these catalogs is an education in itself.

The 1912 PEIRCE catalog is one of the most complete ever issued. While every thing is listed that the experienced beekeeper would require, special information is given for the beginner as to outfits required, and numerous questions are answered for his benefit. Illustrations of the various fixtures and appliances employed in bee culture add greatly to the interest and value of the publication.

If you have ever thought that you would like to keep bees, you should certainly secure the PEIRCE ILLUSTRATED BEE CATALOG and other literature that will be sent you on request. Our correspondence bureau is also at your service, and all questions will be answered promptly and fully.

The professional apiarist, too, will find a careful examination of this catalog profitable, since it covers the whole field of his requirements, the latest improvements and inventions included. Hundreds of Central States beekeepers, and others more distantly located, are experiencing perfect satisfaction in "PEIRCE SERVICE—ROOT QUALITY," as defined in this catalog. It costs you a postal card request—that's all.

A word to those who have the catalog: Let us ship that rush order now.

EDMUND W. PEIRCE
136 West Main St., Zanesville, Ohio

PAPER HONEY-JARS

**A sanitary, substantial, waxed-paper bottle.
Cheap enough to give away with honey.
Sample mailed free.**

Every beekeeper who produces extracted honey and is interested in building up a home market for his product, will at once be interested in this container. It is neat, does not leak, and is especially desirable for granulated honey, as jars can be filled; and after granulation takes place the consumer can remove the paper bottle, thus leaving a beautiful cone of granulated honey ready for the table. Such packages are not affected by moisture, regardless of any damp climate. The beekeeper can deliver his honey from house to house without the annoyance of

exchanging containers, and dealers and stand-keepers will make many additional sales. There are many consumers who will be glad to take home a pound or two of honey if they do not have to pay additional for the container.

The jars are now packed in uniform shipping-boxes containing one gross each, complete with stoppers and a stopper-inserter with each gross. Please note the very light weight when packed for shipment, a feature by which transportation by express is often as cheap as by freight.

PRICES

Half-pints	1 gross, \$1.50; 6 gross, \$ 8.00	Weight per gross, 13 pounds.
Pints	1 gross, \$1.80; 6 gross, \$10.00	Weight per gross, 18 pounds.
Quarts	1 gross, \$2.30; 6 gross, \$12.00	Weight per gross, 28 pounds.

**Perfection
Tight Seal
Honey-jars**

**Improved
Pattern
Reduced
Prices**

Absolutely no leakage. No soiled labels. Desirable for granulated honey. No more rubber bands to taint the contents. Seals air-tight and prevents granulation. Handsome enough to be placed on the tea-table. A jar with no shoulders, making it easy to remove the contents. Each lid contains a wax-paper wad, and nothing could be more sanitary. The smaller jar will contain 5 ounces of honey, the middle-size 11 ounces; and the larger an exact pound. After years of experience in putting up honey for the fancy grocery trade, I have never found a jar that gives such universal satisfaction. All jars packed in corrugated shipping-boxes, which we find better and cheaper than wooden boxes. After filling with honey they can be re-shipped in same case, and the lightness of package saves freight. Breakage in transit out of the ordinary.

PRICES

Small, per gross, in corrugated cases.....	\$3.20
Medium, per gross, in corrugated cases.....	4.80
Large, per gross, in corrugated cases.....	6.00

A descriptive illustrated catalog of a full line of bee-supplies will be mailed to any one interested.

WALTER S. POWDER, 859 Massachusetts Avenue, INDIANAPOLIS, IND.

We Buy Honey

If you have a large crop with no local market for the same, let us handle it for you. We buy in any quantity, large or small, and can assure you of satisfactory treatment. Send a good sample, and be sure that you tell us just how your honey is put up, and how much you have. Do not ship any honey to us without instructions, but wait until you have heard from your sample. We will offer a definite price, and give you shipping instructions.

Cans

We still have a good stock of cans, and can make instant shipment of anything in this line. Good cans and shipping cases are an absolute necessity if you would get the best prices for your honey. Even the best honey put up in poor containers will be graded as second class, and honey that in itself isn't the very best will often bring a very fair price if attractively put up.

Write us for information or advice on any beekeeping subject, and your letters will have careful attention.

A full line of Root's supplies always on hand.

Root's Section-Honey Boxes!

THERE have been very few years when the outlook for a bumper honey crop has been brighter than it is now—at the opening of the season of 1912. Every indication points to an almost unprecedented honey-flow, and the bee-keeper who is not making most complete preparations to reap the harvest will not be very well satisfied with himself when the surplus has all been taken off this fall, or when he knows a big flow is on and he has no sections to put on his hives.

Of course the section problem is the most important one to the comb-honey man, and it MUST be solved right. Therefore why take risks? Why run the slightest chance of getting sections of uncertain quality, or experimenting at a price you can not afford to pay? We are the largest manufacturers of Section-honey Boxes in the world—naturally we have the finest equipment for section-making, and cut up the best lumber. We are in close touch with every phase of bee-keeping—with every department of the honey trade—therefore we know the service sections are required to give, and we make ROOT'S SECTION-HONEY BOXES to meet these requirements. Years of experience and satisfied section patrons throughout the world ought to count; and you, Mr. BEEKEEPER, if you will buy ROOT'S SECTIONS, will understand why.

PRICE LIST OF SECTIONS

4¼x4¼ Beeway Sections—2 inch, 1½, 1¾, 1⅞, or 7 to foot wide.

We send 1½ style 2 beeway when your order does not specify style or width wanted.

No.	A	B	Weight
100	\$.80	\$.70	7 lbs.
250	1.60	1.40	18 "
500	2.75	2.50	35 "
1000	5.50	5.00	70 "

Plain or No-beeway Sections—4¼x4¼x1½, 1¾, or 1⅞; 4x5x1½ or 1⅞; or 3⅞x5x1½.

We send 4¼x1½ plain, or what will fit other items in your order, if you do not specify.

No.	A	B	Weight
100	\$.80	\$.70	6 lbs
250	1.60	1.40	15 "

How to Produce

EXTRACTED HONEY

THIS is the title of a neatly printed, illustrated booklet, the second edition of which has just been published. Each operation in the process of extracted-honey production is explained in detail, with photographic reproductions and drawings to make the text more plain. Beginning with the chapter on "Preparing Colonies for the Honey-flow," the booklet concludes with a description of "Packages for Extracted Honey."

Many helpful and valuable suggestions will be found within the 44 pages this booklet contains, and it is a pleasure to announce its addition to our Bee-keepers' 10-cent Library. Order by name or specify Number 25.

J. B. BROCKWELL,

BARNETTS, VIRGINIA.

Mr. J. B. Brockwell:—I got a golden queen of you last August, and I never told you how I like her. She is a very fine queen—very prolific, very gentle, and her bees are great honey-gatherers. I have some of the finest young queens of her progeny that I have ever seen. Now, if I had another queen as good as the old one, not related, so as not to inbreed, I think I should be pretty well fixed.

Yours truly,
West Salem, Ohio, July 15.

JOSIAH SWINEHART.

APIARIAN SUPPLIES AND BEES.

Marietta, Onondaga Co., New York

One Hundred and Thirty-one Thousand Copies of this Great Book have been Printed.

It is the most widely read work on apiculture in the world, and a never-failing encyclopedia of information for professional and amateur bee-keeper alike.

You Can Not Afford to Keep Bees without The A B C and X Y Z of BEE CULTURE

The latest edition of this work is the most complete of any bee-book that has ever been issued in the English language. While it is still a book for the beginner, it may be read with profit by the advanced bee-keeper. So enormous has been its sale that the publishers have spared neither time nor money to keep this book fully abreast with the times. In the latest edition some scientific and technical matter as well as the practical has been added to its pages. It has been most carefully edited and revised, and the present edition has been gone over page by page by several experts. Its authors and publishers feel that, more than ever, it is a safe and reliable guide to bee-keeping.

In the present edition there is a large number of half-tone reproductions from what might be called moving pictures, showing various steps in the processes for handling bees. While a detailed description goes with the separate views showing each step, yet one can almost learn how to handle bees by simply looking at the series of photographs. Under the head of "Frames, to Manipulate," for example, there are a large number of engravings that show not only the method of handling frames but handling hives and bees in such a way as to do the work with the greatest economy of labor, with few or no stings, and with but little fatigue.

The new methods of queen-rearing have been carefully reviewed, and the main points incorporated in the new edition, so that the practical bee-keeper who possesses a copy will have the best ideas of the subject constantly by his side for reference.

The new methods of wax-production are treated in an exhaustive fashion; and as this subject is now of more importance than formerly, more space has been devoted to it.

The new power-driven automatic extractors are amply illustrated and described. The subject of diseases has received entirely new treatment to keep pace with new discoveries of the last few years. The laws relating to bees have for the first time received full treatment. No other bee-book treats of this very important subject. The divisible-brood-chamber hive and the subject of swarm control have received special attention.

Honey, sugar, nectar, and glucose, written up by a United States government chemist, are carefully defined in accordance with the demands of our new pure-food laws.

The authors have traveled thousands of miles in the United States, with notebook and camera, and have endeavored to incorporate in the pages of this volume all the latest and best practices known to the professional and amateur bee-keepers. There is scarcely a practical method or device known to the bee-keepers of the country that is not here described. Besides the immense amount of valuable material gathered through extensive travel, the work has been enriched with the choicest material that has appeared in the columns of GLEANINGS IN BEE CULTURE, an illustrated semi-monthly by the same authors.

As the title indicates, the book is designed to cover the needs of the amateur and the professional bee-keeper, and all the matter is arranged alphabetically so that the reader may be able to find just the material he seeks without referring to the index, which, however, is very full.

Besides the matter relating to methods and devices, the book contains a complete dictionary of apicultural terms, and a picture gallery comprising a list of the choicest illustrations.

BY A. I. AND E. R. ROOT.

Contains 576 pages, and printed on finest quality plate paper; profusely illustrated with beautiful half-tone engravings from actual photographs.

We have Never Offered a More Popular Combination than This Book and Gleanings in Bee Culture

Virgin queens from my best breeders, 40 cts. each; three for \$1.00.
ROBT. B. SPICER, Wharton, N. J.

QUEENS and 1/2-lb. packages. A strain of three-banded Italian honey-gatherers now ready for you. None better, none cheaper. Untested Italian queens, 50 cts. each; half-pound bees with untested queen, \$1.75. Safe arrival and satisfaction guaranteed.
W. D. ACHOED, Fitzpatrick, Ala.

D. S. Jenkins writes: "I got more bees in half-pound package from you than out of one-pound packages from others, and your queens would be laying next morning after released; and the other fellow's queens it would take some of them four days to commence. You have treated me right."

FOR SALE.—85 colonies of our strain of Italian bees, situated in 8-frame painted hives; Hoffman frames, wired; new combs; \$5.00 per colony at yard, including queens. Bargain.

DOOLITTLE & CLARK, Marietta, N. Y.

For Sale.—800 colonies of Italian bees, more or less, situated in five yards; all in good condition, on this beautiful island of Jamaica, a land of perpetual sunshine; flowers nearly the whole year round; good investment for a practical up-to-date beekeeper to take hold of now. Write for further particulars to

DAVID MARCHALLECK,
Morant Bay, Jamaica.

Golden Italian queens that are golden to the tip, that will produce golden workers, hardy, and honey-gatherers, that I have worked 15 years to produce, and which will please all who try them. My mating should run up to 90 per cent pure or better. Queens from \$1.00 to \$20.00. Send for booklet. No orders booked by return mail before August 1.

I will guarantee to deliver no more queens from this date. I am booked full. Those who have ordered queens will have to wait until I can fill the order or request their money back.

GEO. M. STEELE, 30 S. 40th St., Philadelphia, Pa.

FOR SALE.—North Carolina bred Italian queens, bred up for business; none better for honey-gathering; good recommendations coming in almost every day. I have Root's and Moore's strain, Davis', Quirin's, Laws', and choice imported breeders, to get my fine honey-gathering strain from. I breed all queens in full two-story colonies running over with bees at all times. I don't keep any thing but the red clover and the goldens in my yards. Try them and see for yourself. Untested, 75 cts.; doz., \$7.00; tested, \$1.25; select tested, \$1.50; extra select tested, \$2.00; select breeders, \$3.00; extra select, \$5.00.

H. B. MURRAY, Liberty, N. C.

WANTS AND EXCHANGES

WANTED.—To exchange Root bee supplies, either for money or honey. Catalog.

E. W. PEIRCE, Zanesville, Ohio.

WANTED.—To exchange 190 acres and 30-room hotel for bees and supplies of honey.

ERNEST W. FOX, Clint, Texas.

WANTED.—To exchange Langstroth and Heddon hives for White Rocks or shotgun.

F. R. DAVENPORT, Rt. 7, Kalamazoo, Mich.

REAL ESTATE

WANTED.—To rent an apiary of from 200 to 300 colonies for the season of 1913. For particulars address VERN O. DERBY, Bx. 16, Wileyville, W. Va.

Sale, or five-year lease, 160-acre farm, twelve acres cultivated; the rest heavy timber; bees, cows, cannery. Full information on application.

ALFRED WALLACE, Mt. Ada, Ark.

A beekeeper, a Hollander, wants to buy an apiary with healthy Italian stock, after having worked the season of 1913 with the owner on salary or on shares. Correspondence invited.

G. H. VAN DEN BERG, Monsey, N. Y.

FOR SALE.—Bee and chicken ranch; 85 colonies bees, 1 cow, 1 horse, buggy and spring wagon, 400 chickens, and all fixtures to run the business. For rent.—A well improved 5 acres adjoining city limits of Des Moines. MILO SMITH, Berwick, Iowa.

HELP WANTED

WANTED.—Beeman for next three months. State particulars. F. B. CAVANAGH, Hebron, Ind.

BEEKEEPERS' DIRECTORY

Nutmeg Italian queens, leather color, after June 1, \$1.00. A. W. YATES, Hartford, Ct.

Well-bred bees and queens. Hives and supplies. J. H. M. COOK, 70 Cortlandt St., New York.

Improved golden-yellow Italian queens for 1912; beautiful, hustling, gentle workers. Send for price list to E. E. LAWRENCE, Doniphan, Mo.

QUEENS.—Improved red-clover Italians, bred for business; June 1 to Nov. 15, untested queens, 75 cts.; select, \$1.00; tested, \$1.25 each. Safe arrival and satisfaction guaranteed.

H. C. CLEMONS, Boyd, Ky.

QUIRIN'S famous improved Italian queens, nuclei, colonies, and bees by the pound, ready in May. Our stock is Northern-bred and hardy; five yards wintered on summer stands in 1908 and 1909 without a single loss. For prices, send for circular.

QUIRIN-THE-QUEEN-BREEDER, Bellevue, O.

SPECIAL NOTICES

BY OUR BUSINESS MANAGER

QUEENS.

This is the height of the breeding season with us, and we are prepared now to give exceptionally good service on orders for queens. Quantity orders filled at any time and for any number. All orders filled with the unexcelled Root strain. Queens reared from the best breeding stock, and mated in our own yards, where we carefully control drone production, insuring pure matings of young queens. Untested queens, \$1.00 each; a discount of five per cent in lots of 12 to 25; ten per cent on lots of 25 to 50; \$75.00 for 100. Two hundred for \$140.00. Three hundred for \$180.00. Safe delivery guaranteed in the United States and Canada.

SPECIAL NOTICES

A. I. ROOT

POTATOES AND POTATO GROWING ALL OVER THE WORLD.

I have just been made happy by receiving a great big potato-book of over 500 pages and 100 beautiful half-tone illustrations. It comes from the well-known publishers, Doubleday, Page & Co., of New York. On the first flyleaf I read, "A. I. Root, Esq., compliments of E. H. Grubb and W. A. Guildford." This Mr. Grubb conducted the first potato-instruction train in America, and finally the United States Department of Agriculture authorized Mr. Grubb to visit Europe. Here is what our Secretary of Agriculture says in regard to it:

To whom it may concern:—Mr. Eugene H. Grubb, of Colorado, has made a very thorough and extensive examination into the growing of potatoes in this country and in European countries. He has accumulated much valuable data that ought to be in possession of every farmer in the country. I thoroughly approve of his work, and regret that the law of Congress confines me to the publication of articles of 100 pages, and recommend that he put it upon the market as a private enterprise so that it may be obtained by every potato-grower in the land.

When Mr. Grubb arranged to go to Europe he was authorized by this Department to provide us with data to the extent in which we could use it, and for that purpose was commissioned by the Department. We should be glad now to take as much of his manuscript as would make 100 pages, but all that is valuable can not be crowded into such.

JAMES WILSON, Sec.

While the book describes (sometimes minutely) the particulars for potato-growing in the great potato regions of the earth, it does not go into details as Terry does in our own A B C of Potato Culture. I am pleased to note, however, that its teachings are in the main in perfect harmony with those of T. B. Terry and your humble servant. It is pleasant to note that over in Scotland there are potato-fields of 300 acres, where great crops of potatoes are produced, year after year, without any break or letup; and they have reduced it to such a science that the crop is not only sold on the ground, but in the ground, year after year. The great British commission men in London and other large cities send an agent to purchase the potatoes in the ground. Then they send their own men to do the digging or to superintend the digging, and ship the potatoes just as fast as the market calls for them, and no faster; and the potatoes frequently sell for as much as \$175 per acre, right in the ground.

The way in which they manage to keep up the fertility is by sowing rye grass just as soon as the potatoes are off the ground. As soon as the rye grass is big enough, sheep are turned on, which consume the grass, and they fatten on it, but nothing else. The fat sheep are then sold in the great city markets as fast as they are wanted, and then in addition to the sheep manure left on the ground they put on great quantities of seaweed and stable manure, which is plowed under when the ground begins to freeze. A ton or more per acre of fertilizers is also used. The rye grass makes a tremendous growth in consequence of the heavy fertilizers not being all consumed by the potatoes. You see the rank rye grass grabs and holds the fertilizers left, and furnish humus for the potato growing. Well, for this kind of work, whole potatoes of pretty fair size are planted. The potatoes for seed are dug before they are fully ripe or where the vines have been killed by frost. Such seed is equivalent to "second-crop" seed potatoes used largely in our own country. The use of whole potatoes for seed is, of course, a departure from Terry's one-eye seed potatoes. But Terry grew only mature potatoes for table use. By having only one eye in a place his potatoes are mostly all of table size, and also bring an extra price in the market. I have been for many years aware that, where extra-early potatoes are wanted, whole potatoes are considerably ahead, both here and in Florida. In fact, to get early potatoes before anybody else, we plant great big ones in order that the big potato may not only give the new plant a good sendoff, but it may back it up by its big parent furnishing one of the very best fertilizers from start to finish. Of course, this way of seeding costs, and unless we can get a big price for our extra-early potatoes it will not pay.

POTATOES—380 BUSHELS PER ACRE.

We take the following from a statement made by E. H. Grubb:

"We should easily double or triple our potato production without any increase in acreage. Just consider these figures: In Germany the average production is about 200 bushels of potatoes per acre. In the United States the average production is 86 bushels per acre. With intensive scientific methods of culture on my Carbondale farm I never produce less than 380 bushels per acre, and without the use of commercial fertilizers. This all goes to show you what American soil will do when given a chance."

The above statement in regard to the average production in the United States is certainly humiliating; and I think something like it might be said of the corn crop. Those who have read our A B C of Potato Culture will remember that I myself secured a yield of 375 bushels per acre, and that, too, without a cent's worth of commercial fertilizer. I did it by the use of barnyard manure applied to clover, and then by plowing under the biggest crop of clover I could produce, just before planting potatoes.

Our space will not permit me to tell you of the many good things I should like to mention in this large \$2.00 potato book. If you are growing potatoes by the acre, or contemplating doing so, it will pay you to have the book, even if you already have our recent new edition of the A B C of Potato Culture.

It is pleasant to know that our Department of Agriculture has sufficiently recognized the value of potatoes as food to send a man all over the world to collect valuable information in regard to the production of this great food staple.

Kind Words from Our Customers.

I take occasion herewith to tender Mr. A. I. Root my kind respects. I have often felt inclined to write him a private letter, but I shall not encroach upon his valuable time. I only wished to give expression to my feelings of sympathy with one who, through his most interesting Home talks, is bringing light into many a home, even in far South Africa.

D. S. VAN WARMELO.

Harmony, Pretoria, So. Af., May 23.

WHEN GLEANINGS WAS PRINTED BY THE "WIND-MILL."

I am one of the original GLEANINGS subscribers, when the windmill was the motive power. I was then a resident of Henry Co., Ill. I have no bees at present, but am in the real-estate business, and member of the city council here. I expect to be one of the GLEANINGS family as long as I live. I have always thought highly of A. I. Root and family.

Ontario, Cal., April 22. J. V. CALDWELL.

A KIND WORD FROM ONE OF THE VETERANS ON THE GLEANINGS LIST.

Bro. A. I. Root:—I took GLEANINGS away back when it was very small but always good. If you remember I had a German carp-pond stocked with the first distribution by the Governor, I raise bees, carp and chickens. At one time, away back in the 70's and 80's, you were a young man, and so was I, I am now past 76. I keep bees yet, but not many. I like to read GLEANINGS.

Glenwood, Ind. WILLIAM S. KALER.

DR. MILLER'S RECENT INDISPOSITION AND WHAT HE HAS TO SAY ABOUT IT.

Dear Ernest:—I have always been a believer in divine Providence. Of late my belief has grown stronger and stronger in special providences. I don't believe God takes care of us in job lots, but looks out for each one of us as if each one were the only one in the universe. That doesn't make me feel any more my own importance, but it does make me feel that God is a wonderfully big God that he can give such minute care to so many, many little specks of his creation.

Just now there's a special providence in this Straw business. Never before did I read a number of GLEANINGS without feeling that there were a number of Straws that just *must* be written—this time barely one.

Oh! but it's good to be alive, and to dare to take in a full breath without being in terror lest a cough should rip me in two. I want to thank you for your kind letters, which have done me good.

C. C. MILLER.

FROM 7 TO 18, AND \$85.00 WORTH OF HONEY IN ONE YEAR.

Mr. A. I. Root:—For years I have taken note of you and your enterprises; and because of my confidence in your company's honesty I have bought what I needed in your line of you. I began with three weak colonies of bees last spring (1911); later in the season I took four others from caves. I practiced all known methods, and some not known, to keep down increase. I sold \$85.00 worth of honey, and came out with 18 rousing colonies this spring. I have done this while giving ten hours a day of my time to a railroad company. I consider that good; but I have not time to tell you *how* I did it.

You said one thing in a recent issue of GLEANINGS that I must commend. In substance it was that you were almost persuaded to become a real prohibitionist. What more can we do for any cause than to testify by act and word that we believe in it? By our vote we give a testimony that reaches the uttermost parts of the earth. Of the two leading parties, the average unbiased man can only toss heads or tails to decide which to take. Friend A. I. R., let's shout "God save the king" with our vote, and none will say we are "hired boosters."

M. CLYMER.

Lewis Springs, Ariz., June 8, 1912.

[Friend C., if voting for men who fear God but do not fear the liquor-traffic makes me a prohibitionist, then I am "it."]

HONEY LABELS

There is nothing that adds more to the attractiveness of a honey package than a neat label carefully worded and of the proper style. The guarantee of purity by the producer put on every package he offers for sale is the best protection he can get from the stories of adulteration that injure the sale of his product.

For glass packages a small label is generally preferred, while for tin, one that laps around the package is considered best. We supply both gummed and ungummed labels. We recommend the ungummed, however, for they adhere more readily when pasted on a package, and are not affected by changes in the atmosphere as are the gummed.

We give on the opposite page a few illustrations of some of our stock patterns. These are printed, some of them in two or more colors, some in bronze on glazed paper, and some in black on glazed paper. To get a very adequate idea of these you ought to see samples printed on regular label stock in the proper colors. We have a catalog which shows just what we can furnish in this line, and we shall be glad to send it on request.

Just now we can give very prompt attention to orders for this label work. We can furnish special labels too if you tell us what you want. Of course the price is higher than for our regular patterns; but if you are buying them in very large quantities you may want something to suit your individual tastes. Let us do your label work for you, for we can guarantee satisfaction.

The A. I. Root Co., Medina, O.

No. 90.—Bronze on glazed paper, same price as No. 89.

No. 89.—Bronze on glazed paper, 250, \$1.00; 500, \$1.50; 1000, \$2.25; 2000, \$4.00.

Wording on all labels changed to suit. Labels trimmed to margin. Above prices are on ungummed stock.

No. 94.—Bronze on glazed paper, 250, 90c; 500, \$1.50; 1000, \$2.00; 2000, \$3.50.

No. 91.—Bronze on glazed paper, 250, \$1.00; 500, \$1.50; 1000, \$2.25; 2000, \$4.00.

These Remarkable Books Practically

F R E E

We have now completed arrangements by which we offer all readers, in connection with special subscription offers, any of this great series of booklets called

"MONEY-MAKING SECRETS"

POULTRY SECRETS: First published in 1908, this collection of the carefully-guarded secrets of famous poultrymen created a sensation in poultry circles. Every secret is valuable and every one has passed severe tests of its usefulness. 64 pages, illustrated. 15th Edition, 110th thousand.

HORSE SECRETS: Compiled and written by DR. A. S. ALEXANDER, of Wisconsin, the eminent veterinarian. Exposes the swindling methods of "gyps" and crooked dealers. Also many feeding and fattening secrets. Invaluable to horse buyers and owners. 64 pages, illustrated. 9th Edition, 85th thousand.

THE MILLION EGG FARM: Describing the enormous business and last year the amazing total of 1,121,478 eggs. Written 'specially for beginners. 80 pages, profusely illustrated. 4th Edition, 35th thousand.

THE CURTISS POULTRY BOOK: The story of the Curtiss brothers and their great Niagara Farm, built up from nothing to an annual business approximating \$100,000 per year. Ducks, eggs, broilers, and cut clover are their staples. A remarkable story. 56 pages, illustrated. 3rd Edition, 30th thousand.

\$6.41 PER HEN PER YEAR: Telling of the great success of the Cornings, whose methods of production of high-grade sterile eggs for market revolutionized this branch of the poultry business. 64 pages, illustrated. 14th Edition, 150th thousand.

DUCK DOLLARS: There is money in ducks. The Weber brothers market about 40,000 ducklings each year, and make a clear net profit of 50 cents on each one. This new booklet tells exactly how, with valuable advice for beginners as to operation and markets. 88 pages, illustrated.

FALL-BEARING STRAWBERRY SECRETS: The first complete hand-book covering the culture of this wonderful new fruit. Any one who can raise June strawberries can raise the Fall-bearers, but culture is different. Those who started first are reaping the high market profits. 64 pages, illustrated.

TURKEY SECRETS: The way to make turkeys a profitable farm crop, as demonstrated by HORACE VOSÉ of Rhode Island, the veteran turkey raiser who supplies the turkey for the President's Thanksgiving dinner each year. Instructive and enlightening. 64 pages, freely illustrated.

GARDEN GOLD: A new booklet written for people with small gardens, showing how to raise your own vegetables in these days of high prices, and SAVE money. And how to MAKE money by selling your surplus. Splendid for people with back yards only. 64 pages, illustrated.

SHALL I FARM? For city people trying to decide whether or not to go to the country. No golden promises, but a clear, impartial, unbiased, unprejudiced weighing of the subject. All the advantages and disadvantages of all kinds of farming plainly set forth. Nothing like it ever before printed. 64 pages.

So popular are these booklets, and so valuable their contents, that nearly

400,000 COPIES HAVE BEEN SOLD

during the last three years. Each is the very latest word in its own particular field—together they cover new discoveries, secret methods, exposures, new systems, little known information, and astonishing achievements in many lines.

We Offer { Any one of these booklets, postpaid } All three \$1.00
{ (Your Choice), "GLEANINGS," 1 year, } for
{ FARM JOURNAL, till December, 1915 }

\$1.50 to subscribers in Canada, Philadelphia, and foreign countries, on account of extra postage. Extra booklets, 20c. each. Booklet and papers may go to different addresses if necessary, but these

BOOKLETS CANNOT BE OBTAINED SEPARATELY—ONLY IN THIS COMBINATION.

THIS PAPER is well known to you, and requires no description or praise here.

The FARM JOURNAL is the standard farm and home paper—foremost in the world. It has more than 750,000 subscribers. It is up-to-date, clean, boiled-down, honest. It knows what to say, and can stop when it has said it. It is for the poultryman, gardener, horse owner, dairyman, grain grower, fruitman, the farmer, the villager, the suburbanite, the man who lives in the country, and those who would like to, the women folks, the boys and girls. In short, it is for YOU. Cheerful, entertaining, intensely practical, absolutely clean. When the time is up it will stop.

The Center Control

By R. E. Olds, Designer

Nearly every builder of high-grade cars is designing a center control.

In another year, cars with side levers which block a front door will be so out-of-date as to hardly be salable.

Bear this in mind in selecting a car. The side lever car is now a back number, as every maker knows.

Left Side Drive

In some cars the side levers are merely moved to the center. That idea won't do. Men want to get rid of the reaching. They want the front of the car to be clear.

In Reo the Fifth there is only one lever, and that is placed close to the seat. All the gear shifting is done by moving this lever only three inches in each of four directions.

There are no brake levers, for both the brakes are operated by foot pedals.

This arrangement permits of the left side drive, as in electric cars. The driver sits close to the cars which he passes. He is on the up side of the road. In making any turn which crosses a road he is sitting where he can look back.

That is the greatest reason for the center control—to permit of the left side drive.

R. M. OWEN & CO.

Every car is coming to it as fast as models can be changed. The side levers and the right side drive are going out at once.

This Year's Sensation

Reo the Fifth, with the center control, has been this year's sensation. Our spring output was five times oversold.

In all the 25 years I have spent in this industry, I have never seen such a popular car.

It is this amazing demand which has driven makers to the immediate adoption of center control.

But That Isn't All

There are other reasons beside center control for this car's immense popularity.

It is the final result of my 25 years spent in car building. In every detail it marks the best I know.

The cars are built under my supervision. And I insist on absolute perfection.

The steel is twice analyzed, before and after treating.

The gears are tested in a crushing machine of 50 tons' capacity.

Parts are ground over and over to get utter exactness. The parts in each car pass a thousand inspections.

Engines are put through five severe tests—48 hours in all.

Finished cars are tested over and over.

There are in this car 15 roller bearings. Ball bearings are nowhere used, save in the clutch and fan.

The bodies are finished in 17 coats. The seats are luxurious. The tonneau is roomy.

With a lifetime's reputation at stake on this car, men know I am mighty careful.

Then the Price of \$1,055

And the underprice has been another sensation. We fixed the initial price at \$1,055, which is \$200 below any car in its class.

The price of this car must soon be advanced, because of the advancing materials. It is much too low. But the price remains at \$1,055 while our present materials last.

Reo the Fifth is sold by dealers in a thousand towns. Write for our catalog, showing all styles of bodies, and we will tell you where to see it. Address

Canadian Factory, St. Catharines, Ont.

HONEY MARKETS

The prices listed below are intended to represent, as nearly as possible, the average market prices at which honey is being sold in the various sections of the country. It is stated, this is the price at which sales are being made by commission merchants or by producers direct to the retail merchant. When sales are made by commission merchants the usual commission (from five to ten per cent), cartage, and freight will be deducted; and in addition there is often a charge for storing by the commission merchant. When sales are made by the producer direct to the retailer, commission and storage and other charges are eliminated. Sales made to wholesale houses are usually about ten per cent less than those to retail merchants.

EASTERN MARKETS FOR COMB HONEY.

NO. 1.—All sections well filled, combs straight, firmly attached to all four sides, the combs unsoiled by travel-stain or otherwise, all the cells sealed except an occasional one, the outside surface of the wood well scraped of propolis.

NO. 2.—All sections well filled except the row of cells next to the wood; combs straight; one-eighth part of comb surface soiled, or the entire surface slightly soiled; the outside surface of the wood well scraped of propolis.

NO. 3.—All sections well filled except the row of cells next to the wood; combs straight; one-eighth part of the comb surface soiled, or the entire surface slightly soiled.

NO. 4.—Three-fourths of the total surface must be sealed.

NO. 5.—Must weigh at least half as much as a No. 1.

In addition to this the honey is to be classified according to color, using the terms white, amber, and dark; that is, there will be "Fancy white," "No. 1 dark," etc.

NO. 6.—Sections well filled, combs straight, firmly attached to all four sides, the combs unsoiled by travel-stain or otherwise, all the cells sealed except an occasional one, the outside surface of the wood well scraped of propolis.

FANCY WHITE.—Sections to be well filled, comb firmly attached on all sides and evenly capped, except the row of cells next to the wood, which may be slightly off color. Comb not projecting beyond the wood; wood to be well cleaned; no section in this class to weigh less than 1½ ounces.

NO. 1.—Sections to be well filled, combs firmly attached on all sides and evenly capped, except the row of cells next to the wood, which may be slightly off color. Comb not projecting beyond the wood; wood to be well cleaned; no section in this class to weigh less than 1½ ounces.

NO. 2.—Sections to be well filled; combs firmly attached on all sides and evenly capped, except the row of cells next to the wood, which may be slightly off color. Comb not projecting beyond the wood; wood to be well cleaned; no section in this class to weigh less than 1½ ounces.

ing from ten to twelve ounces, also of such sections that weigh 12 ounces or more, and have not more than 50 uncapped cells all together, which must be filled. Combs and cappings from white to amber in color, but not dark; wood to be well cleaned.

EXTRACTED HONEY.—Must be thoroughly ripened; weigh 12 pounds per gallon. It must be well strained, and packed in new cans. It is classed as white, light amber, and amber.

STRAINED HONEY.—This is honey obtained from combs by all other means except the centrifugal extractors, and is classed as white, light amber, amber, and dark; it must be thoroughly ripened and well strained. It may be put up in cans that previously have contained honey.

BOSTON.—Fancy white comb honey brings 17 to 18; No. 1 ditto, 16 to 17; fancy white extracted, 10 to 11; light amber, 9 to 10; beeswax, 30.

Boston, Aug. 5.

BLAKE-LEE CO.

INDIANAPOLIS.—Extracted honey of finest quality in five-gallon cans is selling at 10½ to 12, according to quantity. No. 1 and fancy white comb sells for 16 to 17. Beeswax is in good demand, and producers are being paid 30 cts. per pound.

Indianapolis, Aug. 2.

WALTER S. POWDER.

SCHENECTADY.—Local producers are bringing a few cases of early honey to our market, and disposing of it in a retail way at 16 and 18 cts. The quality seems to be good compared with last season. No shipments worth while are in sight, and there is no special demand.

Schenectady, Aug. 5.

CHAS. MACCULLOCH.

ALBANY.—The honey demand is beginning to open here now, and a few lots of white comb honey have sold on arrival at 16, which is probably a better price than will be had a month later; for, although not a general demand yet, an early market usually pays best prices.

Albany, N. Y., July 25.

H. R. WRIGHT.

CINCINNATI.—Several shipments of new comb honey have arrived, but it is not moving very fast, prices ranging for No. 1 and fancy, according to the quantity bought, from 14 to 16 cts. Extracted white is selling from 9 to 9½; amber in barrels at 7; cans, 8 cts. Beeswax, fair demand at \$33 per hundred. The above are our selling prices, not what we are paying.

Cincinnati, O., Aug. 3.

C. H. W. WEBER & CO.

ZANESVILLE.—The new crop of honey is beginning to arrive; and the demand, which is a little brisker than it has been, is fairly well supplied for the present. For best grades of comb, producers are offered 13 to 16. Wholesale prices are not established, but there is likely to be a little weakening for the time being, on account of small lots brought in and sold direct to retailers. Producers should receive, for best quality extracted, 8 to 8½. For beeswax, 28 cts. cash, 30 in trade, is being offered, first-hand.

Zanesville, O., Aug. 2.

E. W. PEIRCE.

SURE, OLD COMBS ARE VALUABLE

IF shipped to us for rendering. . . WE EXTRACT 99½ per cent OF WAX, and then pay you Highest Market Prices, or 2 cents additional in trade. . . YOU CAN'T APPROACH THAT FOR PROFIT. . . We need great quantities of Comb and Extracted Honey. . Write us.

THE FRED W. MUTH CO.

"The Busy Bee Men"

51 Walnut Street

Cincinnati, Ohio

SPECIAL DELIVERY

We have anticipated the needs of beekeepers for prompt delivery of supplies during the month of July, and have an unusually large stock from which to draw.

The honey-flow is promising larger than most beekeepers were prepared for, but we have sections and foundation on hand ready for instant shipment, so not a single pound of honey need be lost because of insufficient room in which to store it. Sections of all the standard sizes are here in the original packages, and we can put your name on a package of any size just as soon as your order reaches us.

You will find it will pay you, too, to use foundation liberally this season. Starters are good but full sheets are better, and you can very materially increase your honey crop by giving the bees this little assistance.

We buy honey too, and you will find us ready to give you a good price for your crop, and we can assure you of fair treatment.

Whatever your needs in the beekeeping line, we can supply them promptly, and we are glad to answer questions at any time.

Canadian postage is 20 c. per year. For all other countries in the Postal Union add 60 c. per year postage.

CHANGE OF ADDRESS. When a change of address is ordered, both the new and the old must be given. The notice should be sent two weeks before the change is to take effect.

DISCONTINUANCES. Notice is given just before expiration. Subscribers are urged, if unable to make payment at once after expiration, to notify us when they can do so. Any one wishing his subscription *discontinued* should so advise us upon receipt of the expiration notice: otherwise it will be assumed that he wishes GLEANINGS continued and will pay for it soon.

HOW TO REMIT. Remittances should be made by draft on New York, express-order or money-order, payable to the order of The A. I. Root Co., Medina, Ohio. Currency should be sent by registered letter.

AGENTS. Representatives are wanted in every city and town in the country. A liberal commission will be paid to such as engage with us. References required.

FOREIGN SUBSCRIPTION AGENTS.

Foreign subscribers can save time and annoyance by placing their orders for GLEANINGS with any of the following authorized agents at the prices shown:

PARIS, FRANCE. E. Bondonneau, 120 Avenue Emile Zola.

Per year, postpaid, 8 francs.

GOODNA, QUEENSLAND. H. L. Jones. Any Australian subscriber can order of Mr. Jones. *Per year, postpaid, 6/7 p.*

DUNEDIN, NEW ZEALAND. Alliance Box Co., 24 Castle St. *Per year, postpaid, 6/7 p.*

Honey Reports continued from page 2.

CHICAGO.—The demand has been sufficient to take up the arrivals of comb honey during the past month, and at present there is no surplus nor consignments awaiting sale. The best grades of white comb have been bringing 17 to 18, with amber grades neglected. Extracted white clover and basswood bring 9 to 10. Beeswax is steady at from 31 to 32 if free from sediment. The quality of honey in this valley is excellent.

Chicago, Ill., Aug. 2. R. A. BURNETT & Co.

CINCINNATI.—New comb honey is arriving; and in order to consume the great crop of this section of the country there must be a lower range of prices than last year. We are selling choice comb honey at from 13 to 16 cts., according to the quality and quantity purchased; extracted at 6½ to 7½ for amber, and 8½ to 10 for good to fancy extracted. The above are our selling prices, not what we pay. For choice bright yellow beeswax we are paying 28 cts., delivered here, in cash, or 30 in trade.

THE FRED W. MUTH CO.

Cincinnati, O., Aug. 6.

ST. LOUIS.—The honey market is in the same condition as in ours of July 22. No new comb honey has arrived, and the receipts of extracted honey in barrels are still liberal. There is a good demand for choice light amber, in barrels and half-barrels, at 7 cts. per pound; dark, 6 to 6½. The same grade in five-gallon cans is quotable at one-half to one cent higher, according to the quantity taken. We omit quotations on comb honey, as there is no established price made so far. There are offers from the Pacific coast for choice white comb honey at 15 cts. per pound, delivered here. Beeswax, prime, is in good demand at 29 cts.; inferior and impure, less.

St. Louis, Aug. 5. R. HARTMANN PRODUCE CO.

NEW YORK.—There is no new comb honey on the market as yet to speak of. A few small lots arrived during the past week, and sold at 15 cts. for fancy, 14 for No. 1, and 13 for No. 2. We really do not expect shipments of any size until the latter part of this month or the first part of September. The few little lots which have arrived could hardly be classed as strictly fancy. Such an article no doubt would bring 16 cts., whether any higher price will be obtained is doubtful; but, as said in our last report, there is a large crop in the East, and it is questionable whether buyers would be willing to pay higher prices than those mentioned above. There is no change in the market as to extracted.

New York, Aug. 5. HILDRETH & SEGELKEN.

LIVERPOOL.—Since our last report to you there has been some business on Chilian honey, and about 120 barrels have changed hands—pile X at \$8.16; pile 1 at \$7.68; pile 2 at \$6.96; pile 3 at \$6.00 to \$6.48 per cwt. Jamaican is very quiet at \$6.00 to \$8.40 quoted, and Californian also dull at \$10.08 to \$10.80. We have had little or no enquiry for Hayti; but we think next month should see an improvement, and we hope to make good progress in the autumn. Other descriptions have sold at different quotations as follows: Haitien, \$5.76 to \$7.20; Peruvian, \$3.84 to \$4.80; Chilian, \$5.52 to \$8.16; Jamaican, \$6.24 to \$7.68; Californian, \$9.60 to \$10.92. Beeswax is steady, with sales of Chilian for shipment at \$36.28 to \$36.88, c. i. f., for f. a. q., and at \$37.48 to \$40.58 from store for medium to fine quality. African sorts are firm with a good trade done, mainly at \$32.88 for Sierra Leone, and \$34.48 for Gambria. Other descriptions are quoted as follows: African, \$32.16 to \$34.48; Jamaican, \$3.84; West Indies, \$32.64 to \$37.48.

Liverpool, July 24.

TAYLOR & CO.

JOIN THE NATIONAL RIGHT NOW

By sending one dollar for its official organ, the BEEKEEPERS' REVIEW, from now to the end of 1913, and then after September 1 send fifty cents for membership to one of the National branches for membership to the end of 1913. This is in accordance with an action taken by the Board of Directors.

The REVIEW now has a board of three editors, thus insuring a more than "one-man" paper. What the REVIEW will have to say about the crop conditions this fall will be worth reading. Remember we have been getting crop reports from our members and subscribers, having sent a blank to each one. Send in your subscription of one dollar now, and reap all the benefits.

HILDRETH & SEGELKEN
265 Greenwich St., New York

GOLDEN QUEENS

that produce golden workers of the brightest kind. I will challenge the world on the color of my GOLDENS, and as good honey-getters. Price \$1.00 each; tested, \$2.00. Breeders, \$5.00 and \$10.00.

J. B. BROCKWELL,

BARNETTS, - - - - - VIRGINIA.

Mr. J. B. Brockwell:—I got a golden queen of you last August, and I never told you how I like her. She is a very fine queen—very prolific, very gentle, and her bees are great honey-gatherers. I have some of the finest young queens of her progeny that I have ever seen. Now, if I had another queen as good as the old one, not related, so as not to inbreed, I think I should be pretty well fixed.

Yours truly,
West Salem, Ohio, July 15.

JOSIAH SWINEHART.

LEARN BEEKEEPING from the Beginning

"First Lessons In Beekeeping" and the
American Bee Journal, one year, Both for Only **\$1.00**

"First Lessons In Beekeeping" is a 190-page book telling all that the beginner need know. . . . It has an attractive paper cover, and many illustrations.

"Doolittle's Scientific Queen-rearing," and the
American Bee Journal, one year, Both for Only **\$1.00**

Doolittle's "Scientific Queen-rearing" book contains 126 pages, and is bound in leatherette with round corners. It tells in the clearest way possible just how the famous queen-breeder, Mr. G. M. Doolittle, rears the best of queen bees in perfect accord with Nature's way. As all know, Mr. Doolittle has spent some 40 years in rearing queens and producing honey. He has no superior as a queen-breeder. You can learn to rear fine queens by following his directions.

The beginner will want "First Lessons;" the older beekeeper should have "Scientific Queen-rearing." You will not regret it if you send your \$1.00 now and get either one of these books with the JOURNAL, as the JOURNAL itself is worth more than the total cost.

READ THE CATALOG!

Has it ever occurred to you how valuable a source of information, alike for the prospective beekeeper, the beginner, and the veteran, a modern bee-supply catalog is? A careful perusal of one of these catalogs is an education in itself.

The 1912 PEIRCE catalog is one of the most complete ever issued. While every thing is listed that the experienced beekeeper would require, special information is given for the beginner as to outfits required, and numerous questions are answered for his benefit. Illustrations of the various fixtures and appliances employed in bee culture add greatly to the interest and value of the publication.

If you have ever thought that you would like to keep bees, you should certainly secure the PEIRCE ILLUSTRATED BEE CATALOG and other literature that will be sent you on request. Our correspondence bureau is also at your service, and all questions will be answered promptly and fully.

The professional apiarist, too, will find a careful examination of this catalog profitable, since it covers the whole field of his requirements, the latest improvements and inventions included. Hundreds of Central States beekeepers, and others more distantly located, are experiencing perfect satisfaction in "PEIRCE SERVICE—ROOT QUALITY," as defined in this catalog. It costs you a postal card request—that's all.

A word to those who have the catalog: Let us ship that rush order now.

EDMUND W. PEIRCE
136 West Main St., Zanesville, Ohio

PAPER HONEY-JARS

**A sanitary, substantial, waxed-paper bottle.
Cheap enough to give away with honey.
Sample mailed free.**

Every beekeeper who produces extracted honey and is interested in building up a home market for his product, will at once be interested in this container. It is neat, does not leak, and is especially desirable for granulated honey, as jars can be filled; and after granulation takes place the consumer can remove the paper bottle, thus leaving a beautiful cone of granulated honey ready for the table. Such packages are not affected by moisture, regardless of any damp climate. The beekeeper can deliver his honey from house to house without the annoyance of

exchanging containers, and dealers and stand-keepers will make many additional sales. There are many consumers who will be glad to take home a pound or two of honey if they do not have to pay additional for the container.

The jars are now packed in uniform shipping-boxes containing one gross each, complete with stoppers and a stopper-inserter with each gross. Please note the very light weight when packed for shipment, a feature by which transportation by express is often as cheap as by freight.

PRICES

Half-pints	1 gross, \$1.50; 6 gross, \$ 8.00	Weight per gross, 13 pounds.
Pints	1 gross, \$1.80; 6 gross, \$10.00	Weight per gross, 18 pounds.
Quarts	1 gross, \$2.30; 6 gross, \$12.00	Weight per gross, 28 pounds.

Perfection Tight Seal Honey-jars

**Improved
Pattern
Reduced
Prices**

Absolutely no leakage. No soiled labels. Desirable for granulated honey. No more rubber bands to taint the contents. Seals air-tight and prevents granulation. Handsome enough to be placed on the tea-table. A jar with no shoulders, making it easy to remove the contents. Each lid contains a wax-paper wad, and nothing could be more sanitary. The smaller jar will contain 5 ounces of honey, the middle-size 11 ounces; and the larger an exact pound. After years of experience in putting up honey for the fancy grocery trade, I have never found a jar that gives such universal satisfaction. All jars packed in corrugated shipping-boxes, which we find better and cheaper than wooden boxes. After filling with honey they can be re-shipped in same case, and the lightness of package saves freight. Breakage in transit out of the ordinary.

PRICES

Small, per gross, in corrugated cases.....	\$3.20
Medium, per gross, in corrugated cases.....	4.80
Large, per gross, in corrugated cases.....	6.00

A descriptive illustrated catalog of a full line of bee-supplies will be mailed to any one interested.

WALTER S. POWDER, 859 Massachusetts Avenue, INDIANAPOLIS, IND.

We Buy Honey

If you have a large crop with no local market for the same, let us handle it for you. We buy in any quantity, large or small, and can assure you of satisfactory treatment. Send a good sample, and be sure that you tell us just how your honey is put up, and how much you have. Do not ship any honey to us without instructions, but wait until you have heard from your sample. We will offer a definite price, and give you shipping instructions.

Cans

We still have a good stock of cans, and can make instant shipment of anything in this line. Good cans and shipping cases are an absolute necessity if you would get the best prices for your honey. Even the best honey put up in poor containers will be graded as second class, and honey that in itself isn't the very best will often bring a very fair price if attractively put up.

Write us for information or advice on any beekeeping subject, and your letters will have careful attention.

A full line of Root's supplies always on hand.

Root's Section-Honey Boxes!

THERE have been very few years when the outlook for a bumper honey crop has been brighter than it is now—at the opening of the season of 1912. Every indication points to an almost unprecedented honey-flow, and the bee-keeper who is not making most complete preparations to reap the harvest will not be very well satisfied with himself when the surplus has all been taken off this fall, or when he knows a big flow is on and he has no sections to put on his hives.

Of course the section problem is the most important one to the comb-honey man, and it **MUST** be solved right. Therefore why take risks? Why run the slightest chance of getting sections of uncertain quality, or experimenting at a price you can not afford to pay? We are the largest manufacturers of Section-honey Boxes in the world—naturally we have the finest equipment for section-making, and cut up the best lumber. We are in close touch with every phase of bee-keeping—with every department of the honey trade—therefore we know the service sections are required to give, and we make **ROOT'S SECTION-HONEY BOXES** to meet these requirements. Years of experience and satisfied section patrons throughout the world ought to count; and you, Mr. BEEKEEPER, if you will buy **ROOT'S SECTIONS**, will understand why.

PRICE LIST OF SECTIONS

Great Majestic

Malleable and Charcoal Iron Range

The Range With A Reputation

Buying a new range is a matter worthy of your most careful consideration. It is a mistake to buy from pretty pictures and glowing printed descriptions—very inferior ranges are plentifully applied with both. Before deciding upon a range, the wise woman will go to the local dealer handling them and examine closely into the superior points of merit of the **Great Majestic**—the range with a reputation, built on honor—of the best materials.

Won't Break or Rust Like Steel—Outwears Three Ordinary Ranges

It is the ONLY range made of malleable iron and charcoal iron. Charcoal iron won't rust like steel—malleable iron can't break, and while the first cost of a Great Majestic may be more than others, it outwears 3 ordinary ranges.

All Copper Movable Reservoir

Heated through copper pocket stamped from one piece of copper, setting against fire. Holds 15 gal. By turning lever, frame and reservoir—moves away from fire—patented feature only on **Majestic**.

Perfect Baker—Fuel Saver

The **Majestic** is put together with rivets—joints and seams remain air tight.

The oven is lined with guaranteed pure asbestos board, put there to stay covered with an iron grate—you can see it. Uses but half the fuel used in other ranges, gives an absolutely even dependable baking heat.

The **Majestic** is for sale by the best dealers in nearly every county in 40 states. Write for our booklet, "Range Comparison."

THE BEST LIGHT CO.
306 E. 5th St., Canton, Ohio

MAKES AND BURNS ITS OWN GAS

Can you always eat all that you "can"?

After the work of "canning" do you find much of your fruit is spoiled? Then, why persist in using old-style, narrow-necked, tin-topped, screw-capped jars? That was the old way of "canning." The new way, the easier, safer, *better* way is called "jarring," preserving in the all-glass

E-Z SEAL JAR

Try putting up beets, beans, corn and tomatoes for winter use. It is *fun* when you use the E-Z Seal Jar. It has the sanitary all-glass cap—no metal at all. No twisting and turning—the cap clamps with a spring seal. It closes and opens with a *touch* of the finger.

Free Jar — Free Book

Cut out this coupon, take it to your grocer—he will give you one E-Z Seal Jar FREE. Be sure and

write us for FREE Book of Recipes — it tells many things you should know.

In order to secure free jar, present this coupon to your dealer before October 15, 1912, properly filled out.

HAZEL-ATLAS GLASS CO.
Wheeling, W. Va.

This is to certify that I have received one "Atlas" E-Z Seal Jar free of all cost or obligation. This is the first coupon presented by any member of my family.

is now mailing queens every day except Sunday. These queens are going to almost every State in the Union. A statement in public print says, "The postoffice at Beeville has probably cancelled more stamps on queen-cages than any other postoffice in the world." Whether this is true or not, it is true that Laws' queens are giving eminent satisfaction, and old customers are continually reordering their orders.

I am breeding but the one strain of three-banded Red-clover Stock Italians. A square deal and good queens are all that I can promise. I shall be pleased to have your order, which will be filled in rotation; however, I can also take care of rush orders.

Prices: Single queen, \$1.00; six for \$5.00; 100, \$75.00.

ADDRESS PLAINLY

W. H. LAWS, BEEVILLE, TEXAS

MILLER'S STRAIN Red-clover ITALIAN QUEENS

By return mail or money refunded. Bred from my superior breeder; for business, gentle; no better hustler; bees just roll honey in; three-banded; Northern bred; hardy and vigorous; winter well; not inclined to swarm; bred from best leather-colored, long-tongued, red-clover strains. Untested, 75c; six, \$1.00; dozen, \$1.50. Select untested, \$1.00; six, \$5.00; dozen, \$9.00. Satisfaction guaranteed. I. F. MILLER, previously of Brookville and Reynoldsville, Pa., a queen specialist for 15 years, is agent and breeder for E. A. Miller. Send all orders to

GRAY PRINTING CO., Fostoria, O.
Make ENGRAVINGS for GLEANINGS

SPECIAL OFFER on QUEENS

We have on hand about 200 tested Italian queens, one year old, that we will offer at 75 cts. each; 6 for \$4.25. These are queens from our very best stock, and will do good service for at least two more years. Young queens, untested, \$1.00 each, 6 for \$5.00; tested, \$1.25; 6 for \$6.25.

Fred Leininger & Son, Delphos, Ohio

Queens--Queens

Warranted three-banded Italian queens, 75 cts. each; \$4.25 per 6; \$8.00 per dozen. If these queens fail to give satisfaction you can have your money back.

L. H. ROBEY

WORTHINGTON, WEST VIRGINIA

Queens reared scientifically from breeders perfected by years of elimination of all undesirable traits, are far better and more prolific than the ones hatched from a natural swarm or superscedure cells. We have the famous Moore strain of Italians, and are giving every care to the perfection of cells and mating. We have never had any disease in or near our apiary. If you are interested, write us. Untested queens, 75 cts.; dozen, \$8.00.

BEE CULTURE

The only cyclopedia on bees, 536 pages, fully illustrated. Every phase of the subject fully treated by experts. Price \$1.50 postpaid; money refunded if unsatisfactory. Catalog of supplies and sample copy of our semi-monthly magazine, *Gleanings in Bee Culture*, free if you mention this paper. *Gleanings in Bee Culture*, Medina, Ohio.

PUBLICATIONS ON

BEE CULTURE

Please use coupon below, checking the numbers of items wanted.

The pamphlets and booklets listed below are of more than ordinary interest:

- 1 **My First Season's Experience with the Honey-bee.** By the "Spectator," of the *Outlook*, of New York. A ten-page leaflet detailing the experiences of this well-known writer. You will read the leaflet through before you lay it down. Free.
- 2 **The Bee-keeper and Fruit-grower.** A 15-page booklet giving actual facts regarding the value of bees to fruit, and showing how bee-keeping may be doubly profitable to the fruit-grower. Fruit-growers are realizing as never before the necessity of having honey-bees in close proximity to their blossoming fruit. Free.
- 3 **Bee-keeping for Sedentary Folk.** A 24-page leaflet reciting the actual experiences of an amateur bee-keeper, showing what equipment is best, points derived, etc. Free.
- 4 **Catalog of Bee-keepers' Supplies.** Our complete catalog will be mailed free to any address on request.
- 8 **Habits of the Honey-bee.** By Dr. E. F. Phillips. A somewhat scientific handling of the habits and anatomy of the bee. Price 10 cts.
- 9 **How to Keep Bees.** A book of 228 pages detailing in a most interesting manner the experience of a beginner in such a way as to help other beginners. Price \$1.00 postpaid.
- 10 **The A B C of Bee Culture.** A complete encyclopedia of bees, of 576 pages, fully illustrated, \$1.50 postpaid; half leather, \$2.
- 11 **Gleanings in Bee Culture.** A 64-page illustrated semi-monthly magazine, the leading exponent of bee culture in this country. Ten cents per issue, but to new subscribers we will furnish it six months for 25 cts.
- 12 **Back-yard Bee-keeping.** Six interesting lessons written in readable newspaper style. Many facts to encourage the "City Bound" man or woman with the back-to-the-land longing. Free.
- 15 **Truth About Sweet Clover.** Interesting booklet of nearly 100 pages. Tells of value of sweet clover for honey, for plowing under, as fertilizers of the soil, and food for horses, cattle, swine, sheep, etc. Free.

The coupon below may be used as an order sheet by properly checking the numbers of items wanted and adding your signature, and remittance, if required.

CURD WALKER, Queen-breeder,
Rt. 1, Box 18, Jellico, Tenn.

Golden Italian queens that are golden to the tip, that will produce golden workers, hardy, and honey-gatherers, that I have worked 15 years to produce, and which will please all who try them. My mating should run up to 90 per cent pure or better. Queens from \$1.00 to \$20.00. Send for booklet. No orders booked by return mail before August 1.

I will guarantee to deliver no more queens from this date. I am booked full. Those who have ordered queens will have to wait until I can fill the order or request their money back.
GEO. M. STEELE, 30 S. 40th St., Philadelphia, Pa.

QUEENS and ½-lb. packages. A strain of three-banded Italian honey-gatherers now ready for you. None better, none cheaper. Untested Italian queens, 50 cts. each, half-pound bees with untested queen, \$1.75. D. S. Jenkins writes: "I got more bees in half-pound package from you than out of one-pound packages from others, and your queens would be laying next morning after released; and the other fellow's queens it would take some of them four days to commence. You have treated me right." Safe arrival and satisfaction guaranteed.

W. D. ACHORD, Fitzpatrick, Ala.

Queens from Georgia; blacks and hybrids. Three for \$1.00. Tested red-clover Italians, \$1.00 each. Safe arrival guaranteed.

JOHN W. CASH, Bogart, Ga.

FOR SALE.—Italian queens, untested, 75c.; tested, \$1.00. Bees by the pound, nucleus, or full colonies. Red-clover bees.

EUGENE S. WATSON, Rt. 2, Madison, Me.

FOR SALE.—35 colonies of our strain of Italian bees in 8-frame painted hives; Hoffman frames, wired; new combs; \$5.00 per colony at yard, including queens. Bargain.

DOOLITTLE & CLARK, Marietta, N. Y.

FOR SALE.—800 colonies of Italian bees, more or less, situated in five yards; all in good condition, on this beautiful island of Jamaica, a land of perpetual sunshine; flowers nearly the whole year round; good investment for a practical up-to-date beekeeper to take hold of now. Write for further particulars to

DAVID MARCALLECK,
Morant Bay, Jamaica.

FOR SALE.—200 stands of Italian bees at a bargain; only \$3.90 if taken on stand; mostly in ten-frame dovetailed hives; some in eight-frame hives. Here is a good chance to buy a carload of bees together with your neighbors if you can't use them all. I have plenty of empty hives and supers at a bargain to fill the car. These bees are at Alma,

J. L. FAJEN, Stover, Mo.

FOR SALE.—Italian queens, bred from the best honey-gathering strains obtainable. Untested, 75 cts.; select, \$1.00; tested, \$1.25; select tested, \$1.50. Nuclei without queen, one frame, \$1.50; two-frame, \$2.00; three-frame, \$2.75. For queens and nuclei in quantity lots, and bees by the pound, write for prices and circular. Virgin queens from my best breeders, 40 cts. each; three for \$1.00.

ROBT. B. SPICER, Wharton, N. J.

FOR SALE.—Famous North Carolina-bred Italian queens; bred for honey-gathering; long-lived; prolific; hardy; beautiful. My bees are superior honey-gatherers. My queens give satisfaction. I have the Root-Moore strain, Davis', Quirin's, Laws' choice imported breeders to get my fine honey-gathering strain from. I had a fine breeder I sold to Hon. W. C. Fleming, of Greensboro, N. C., last year. He says her bees produced over 200 pounds of choice comb honey last May. His price on her was \$20. I rear all cells in two-story colonies running over with bees at all times. I don't rear any thing but red-clover and golden. No foul brood. Untested, 75c.; dozen, \$7.00; tested, \$1.25; select tested, \$1.50; extra select tested, \$2.00; breeders, \$3.00 and \$5.00.

H. B. MURRAY, Liberty, N. C.

INDIAN RUNNER DUCKS

White Indian Runner duck eggs. High fertility guaranteed. Running water.

OTTO WESTFELT, Halcyon, Cal.

Fawn and White Indian Runner duck eggs, \$1.00 per 11; \$7.00 per 100. Day-old ducklings, 25 cts. each. Mating-list free.

KENT JENNINGS, Mt. Gilead, O.

INDIAN RUNNER DUCKS, American Standard light fawn and white. I have a fine lot of one-year-old breeders for sale at a real bargain price. I can start you, and start you with the best. Write me.

C. O. YOST, Rt. 4, Box D, Winchester, Ind.

MISCELLANEOUS

FOR SALE.—Professional photographers' portrait camera and stand, lens, aplamat, B No. 5, 13x11. If you want to get a good outfit cheap, address

C. B. MASON, Butler, Indiana.

WANTS AND EXCHANGES

WANTED.—An apiary in the Arkansas Valley, or a partner in a carload. R. S. BECKTELL, Rifle, Col.

WANTED.—To exchange Root bee supplies, either for money or honey. Catalog.

E. W. PEIRCE, Zanesville, Ohio.

WANTED.—To exchange 190 acres and 30-room hotel for bees and supplies of honey.

ERNEST W. FOX, Clint, Texas.

REAL ESTATE

FOR SALE.—A clean established apiary, located near river and railroad depot in this city. A bargain.

H. C. ADLER, Victoria, Texas.

FOR SALE.—Apiary of 105 colonies of bees, with or without location; $\frac{3}{4}$ of an acre of ground in the edge of village, and planted to all kinds of fruit; about 40 trees are now bearing. Beeyard is enclosed with six-foot tight fence, which is lined inside with grapevines, currants, gooseberries, and blackberries. Frame shop and honey-house $1\frac{1}{2}$ story; 65-barrel cistern; corn-crib; chicken and hog yards; every thing one needs but dwelling house. This would be a fine location for a queen-breeder—not over a dozen colonies of bees within $1\frac{1}{2}$ miles of the yard. No disease, and have never had any. The bees are all in good shape; hives as good as new; combs built on Hoffman frames; wired foundation, except possibly 100 frames. I spent \$500 in fitting up my yard, not counting my labor. Land sells here from \$200 to \$400 per acre. I am nine miles below Zanesville, on the Muskingum River, overflowing creek and river bottoms west, south, and east of me. The location is No. 1; have had but one failure in 21 years that I have kept bees; good market for honey near. My crop is sold, and not all off yet, at \$3.75 per case. Any one buying the property will get good hive-stands, what winter cases I have, shade-boards, cushions, etc. I will take \$1000 for ground and bees, and a low price for extras, or will sell the bees, to be moved, for \$500.

J. F. TRUEDELL, Duncan's Falls, O.

BEEKEEPERS' DIRECTORY

Nutmeg Italian queens, leather color, after June 1, \$1.00. A. W. YATES, Hartford, Ct.

Well-bred bees and queens. Hives and supplies. J. H. M. COOK, 70 Cortlandt St., New York.

Improved golden-yellow Italian queens for 1912; beautiful, hustling, gentle workers. Send for price list to E. E. LAWRENCE, Doniphan, Mo.

QUEENS.—Improved red-clover Italians, bred for business; June 1 to Nov. 15, untested queens, 75 cts.; select, \$1.00; tested, \$1.25 each. Safe arrival and satisfaction guaranteed.

H. C. CLEMONS, Boyd, Ky.

QUIRIN'S famous improved Italian queens, nuclei, colonies, and bees by the pound, ready in May. Our stock is Northern-bred and hardy; five yards wintered on summer stands in 1908 and 1909 without a single loss. For prices, send for circular.

QUIRIN-THE-QUEEN-BREEDER, Bellevue, O.

SPECIAL NOTICES

BY OUR BUSINESS MANAGER

WHEELBARROW WHEELS.

We have on hand quite a number of extra steel wheelbarrow wheels which ordinarily sell for \$1.75. To reduce stock we offer these, while they last, at \$1.25 each; 3 for \$3.00. They are 28 inches in diameter; tire $1\frac{1}{2}$ inches wide; eight $\frac{3}{8}$ -inch steel spokes in a cast hub 4 inches long. Axle is $\frac{3}{4}$ inch in diameter for $13\frac{1}{2}$ inches, with bearing at each end $2\frac{1}{4}$ inches long by scant $\frac{1}{2}$ -inch diameter.

OBSERVATION HIVES, OLD STYLE.

We have found at another of our agencies some more of the old-style observation hives as shown in illustration. We will furnish them, while they last, at 35 cents each in flat, without glass. Each hive requires two pieces of glass 9×19 to fit it up when nailed. Unless ordered with other goods we will ship direct from Osceola Mills, Pa., which is near the center of the State.

SHIPPING-CASES, SECOND-HAND, NAILED UP.

We have an accumulation of second-hand shipping-cases from which comb honey has been sold or repacked. Some of them are of our own make, and practically as good as new, while more of them are western-made pine cases, somewhat rougher than our make, and not so desirable. We have tried to price them according to their value. The list available is as follows, and offered while they last:

126 cases, $10\frac{1}{2}$ -inch, 4-row, for 24 sections, $4\frac{1}{4} \times 7$ to foot or $1\frac{3}{4}$; \$1.20 for 10; \$5.50 for 50; \$10.00 for 100; \$12.00 for the lot.
406 cases, $11\frac{1}{2}$ -inch, 4-row, for 24 sections, $4\frac{1}{4} \times 1\frac{1}{2}$; \$1.20 for 10; \$5.50 for 50; \$10.00 for 100. About two-thirds of these have a wooden slide in place of glass, and will be sold at 2 cts. each less without the glass.

96 cases, 12-inch, 4-row, for 24 sections, $4\frac{1}{4} \times 1\frac{1}{2}$ to 2-inch; \$1.20 for 10; \$5.50 for 50; \$9.50 for lot.

189 cases for 24 sections, $4 \times 5 \times 1\frac{1}{2}$; \$1.30 for 10; \$6.00 for 50; \$11.00 for 100; \$19.00 for lot.

55 cases for 24 sections, $3\frac{3}{4} \times 5 \times 1\frac{1}{2}$; \$1.30 for 10; \$6.00 for lot.

26 cases for 24 sections, $4\frac{1}{4} \times 4\frac{1}{4} \times 1\frac{1}{2}$; \$1.40 for 10; \$3.00 for lot.

Most cases include glass. If wanted in carriers, add 5 cts. per case to cover cost of carrier.

OLD-STYLE EXTRACTORS.

We have a few extractors which we offer at bargain prices because they are not of our latest pattern. They do not have ball bearings, die-molded gears, nor the slip-gear device. Otherwise they are new machines which sold for much higher prices than we ask for them now to close out. They are located at different branch offices, and are offered at the prices named for shipment direct from the office where they are now stored.

At Des Moines, Iowa, 4 No. 15 Cowan, L. size two-frame machines, offered at \$9.00 each, and one No. 17 Cowan with 12-inch comb-pockets, offered for \$10.00.

At Mechanic Falls, Me., No. 4 15 Cowan, L. size two-frame machines offered at \$9.00 each, and 2 No. 4 Novice for short frames, 13 inches or less in depth, and $13\frac{1}{4}$ inches in width or less, offered at \$7.00 each.

At Syracuse, N. Y., 3 No. 15 Cowan L. size, two-frame, offered at \$9.00 each. One No. 5 Novice, L. size, two-frame, offered at \$7.00.

At New York, one No. 17 Cowan two-frame, with 12-inch comb-pockets, offered for \$10.00.

At Philadelphia, Pa., one No. 17 Cowan two-frame, offered for \$10.00. One No. 18 Cowan, two-frame, with $12\frac{1}{2}$ -inch comb-pockets, offered for \$10.50. One No. 25 Cowan four-frame, L. size, offered for \$16.00.

At Washington, D. C., one No. 15 Root Automatic L. size; price \$10.00.

SHIPPING-CASES AT BARGAIN PRICES.

We have dropped from our catalog certain sizes of shipping-cases while we still have some of them in stock. We are making changes in some other styles, and desire to close out what stock we have of older patterns. For these reasons we offer the following cases, while stock lasts, at special prices. If you do not see in the list what you want, write to us, advising the number and size wanted, and we will quote you.

16-lb. two-row cases to hold 16 sections $4\frac{1}{4} \times 1\frac{1}{2}$.
24 crates of 50 each, with two-inch glass; price \$5.00 per crate.

10 crates of 10 each; price \$1.00 per crate.
6 crates of 50 each, with three-inch glass; price \$5.25 per crate.

12-lb. two-row cases to hold 12 sections $4\frac{1}{4} \times 1\frac{1}{2}$.
26 crates of 50 each, with three-inch glass; price \$4.50 per crate.

For 12 sections $4\frac{1}{4} \times 1\frac{1}{2}$ or 10 sections $4\frac{1}{4} \times 1\frac{1}{2}$.
10 crates of 50 each, with three-inch glass; price \$4.00 per crate.

10 crates of 50 each, with three-inch glass; price \$4.25 per crate.

12-lb. three-row cases to hold 12 sections $4\frac{1}{4} \times 1\frac{1}{2}$.
52 crates of 50 each, with three-inch glass; price \$5.25 per crate.

20 crates of 50 each, with two-inch glass; \$5.00 per crate.

12-lb. three-row cases to hold 12 sections $4\frac{1}{4} \times 1\frac{1}{2}$.
22 crates of 50 each, with two-inch glass; price \$4.75 per crate.

15 crates of 50 each, with three-inch glass; price \$5.00 per crate.

11 crates, 10 each, with three-inch glass; price \$1.00 per crate.

24-lb. four-row cases for 24 sections $4\frac{1}{4} \times 1\frac{1}{2}$, or 20 sections $4\frac{1}{4} \times 1\frac{1}{2}$.

25 crates of 50 each, with three-inch glass; price \$7.50 per crate.

8 crates of 10 each, with two-inch glass; price \$1.60 per crate.

Cases for 20 sections $4 \times 5 \times 1\frac{1}{2}$.
7 crates of 50 each, with three-inch glass; \$6.50 per crate.

Cases for 12 sections $4 \times 5 \times 1\frac{1}{2}$.
14 crates of 50 each, with three-inch glass; \$5.00 per crate.

Cases for 12 sections $3\frac{3}{4} \times 5 \times 1\frac{1}{2}$.
16 crates of 50 each, with three-inch glass; \$5.00 per crate.

24-lb. cases for 24 sections $4\frac{1}{4} \times 1\frac{1}{2}$.
66 crates of 50 each, with two-inch glass; \$8.00 per crate.

This stock is at Medina. We also have some stock of similar cases at other offices which we will furnish at same prices, while they last, on orders specifying these prices.

I have taken GLEANINGS about three years, and I tell you, Mr. Root, that I have enjoyed and received very much benefit from reading your good straightforward talks. It has helped to lead me to higher thoughts and deeds and to become a Christian last winter. I am 27 years old; keep 24 colonies of bees, and help my father care for a vineyard. We are located on the west shore of Lake Keuka, and people are engaged largely in grape culture around here.

Pulteney, N. Y.

FRED COLE.

ON p. 381 of our issue for June 15 the article on shallow dummies was credited to Leon C. Miller instead of Leon C. Wheeler.

HONEY LABELS

There is nothing that adds more to the attractiveness of a honey package than a neat label carefully worded and of the proper style. The guarantee of purity by the producer put on every package he offers for sale is the best protection he can get from the stories of adulteration that injure the sale of his product.

For glass packages a small label is generally preferred, while for tin, one that laps around the package is considered best. We supply both gummed and ungummed labels. We recommend the ungummed, however, for they adhere more readily when pasted on a package, and are not affected by changes in the atmosphere as are the gummed.

We give on the opposite page a few illustrations of some of our stock patterns. These are printed, some of them in two or more colors, some in bronze on glazed paper, and some in black on glazed paper. To get a very adequate idea of these you ought to see samples printed on regular label stock in the proper colors. We have a catalog which shows just what we can furnish in this line, and we shall be glad to send it on request.

Just now we can give very prompt attention to orders for this label work. We can furnish special labels too if you tell us what you want. Of course the price is higher than for our regular patterns; but if you are buying them in very large quantities you may want something to suit your individual tastes. Let us do your label work for you, for we can guarantee satisfaction.

The A. I. Root Co., Medina, O.

No. 90.—Bronze on glazed paper, same price as No. 89.

Wording on all labels changed to suit. Labels trimmed to margin. Above prices are on ungummed stock.

No. 94.—Bronze on glazed paper, 250, 90c; 500, \$1.50; 1000, \$2.00; 2000, \$3.50.

No. 91.—Bronze on glazed paper, 250, \$1.00; 500, \$1.50; 1000, \$2.25; 2000, \$4.00.

ROOT'S BEEKEEPERS SUPPLIES

You may have a catalog of supplies; but if you haven't ours for 1912 you have missed something really worth while, and should get one at once. It is the largest and most complete ever published—more than a mere price list of supplies—a book that every beekeeper can read with pleasure and profit. Beginners will find answers to many perplexing questions, and advanced beekeepers timely suggestions that will save them money. Old customers are writing us frequently letters like the following:

Your catalog for 1912, designated ROOT'S BEEKEEPERS' SUPPLIES, is received, and I certainly thank you for this book. I have had your catalog on my desk for years, and have used Root's supplies all along. I note the enlargement and improvement in your new catalog, and notice many things I expect to add to my apiary.
Crystal City, Texas. C. W. Cox.

Our catalog this season also gives a full and complete list of books and booklets which we can supply. Many of these booklets are free, which doesn't mean that they are not worth reading, but simply that we want you to be informed on the subjects of which they treat. Send for a catalog, and check those in which you are interested.

Quick Deliveries

Next to having the best goods made, there is nothing so important to the beekeeper in the busy season as to have goods delivered just when they are wanted most. It isn't always possible to ship goods from a distant factory and have them reach destination within a day or two, as is sometimes necessary during the height of the season, but with distributing-houses located in the large shipping-centers we are able to supply beekeepers everywhere, with no loss of time and with minimum transportation charges.

Send Your Hurry Orders

to any one of the offices listed below, and let us show you what we can do for you in point of service. Cars are going to these branches at the rate of two or three a week, so the stocks are new and fresh, and we usually have just what you want. If it isn't in stock at your nearest branch our manager will include your order with his specifications and you may have your goods come in the next car, thereby saving on transportation charges and getting the goods in better shape than you would by local freight.

Whatever Your Wants

we can supply you, and, of course, there is no question about the quality of our goods. The name "Root" in connection with bee-supplies means the best of every thing in this line, and the best is always the cheapest, as our customers will testify. If you have never used our supplies you should make a trial of them this season. Once used, we are sure you will want no other.

I have just received my goods, order No. 10739. I am more than pleased with them. I had intended to make my hives, but when I received the sample hive and saw the No. 1 pine lumber from which it was made, and considering the workmanship, I am satisfied I can buy cheaper than I can make them; enough cheaper to save the price of the lumber.

PROTECTION HIVE

The best and lowest-priced double-wall hive on the market. This hive has $\frac{3}{4}$ material in the outer wall, and is not cheaply constructed of $\frac{1}{2}$ material as are some other hives on the market. Packing or dead-air space as you prefer. Remember, winter is approaching. Get your bees into comfortable quarters before it is here. Send for a catalog.

A. G. WOODMAN CO., GRAND RAPIDS, MICH.

HONEY MARKETS

The prices listed below are intended to represent, as nearly as possible, the average market prices at which honey and beeswax are selling at the time of the report in the city mentioned. Unless otherwise stated, this is the price at which sales are being made by commission merchants or by producers direct to the retail merchant. When sales are made by commission merchants the usual commission (from five to ten per cent), cartage, and freight will be deducted; and in addition there is often a charge for storing by the commission merchant. When sales are made by the producer direct to the retailer, commission and storage and other charges are eliminated. Sales made to wholesale houses are usually about ten per cent less than those to retail merchants.

EASTERN GRADING RULES FOR COMB HONEY.

FANCY.—All sections well filled, combs straight, firmly attached to all four sides, the combs unsoiled by travel-stain or otherwise, all the cells sealed except an occasional one, the outside surface of the wood well scraped of propolis.

A No. 1.—All sections well filled except the row of cells next to the wood; combs straight; one-eighth part of comb surface soiled, or the entire surface slightly soiled; the outside surface of the wood well scraped of propolis.

No. 1.—All sections well filled except the row of cells next to the wood; combs straight; one-eighth part of the comb surface soiled, or the entire surface slightly soiled.

No. 2.—Three-fourths of the total surface must be filled and sealed.

No. 3.—Must weigh at least half as much as a full-weight section.

In addition to this the honey is to be classified according to color, using the terms white, amber, and dark; that is, there will be "Fancy white," "No. 1 dark," etc.

NEW HONEY-GRADING RULES ADOPTED BY THE COLORADO STATE BEEKEEPERS' ASSOCIATION, DECEMBER 13, 1911.

FANCY WHITE.—Sections to be well filled, comb firmly attached on all sides and evenly capped, except the outside row next to the wood. Honey, combs, and cappings white, and not projecting beyond the wood. Wood to be well cleaned; no section in this grade to weigh less than 13½ ounces.

No. 1.—Sections to be well filled, combs firmly attached on all sides and evenly capped, except the outside row next to the wood. Honey white or very light amber; comb and cappings from white to slightly off color. Comb not projecting beyond the wood; wood to be well cleaned; no section in this grade to weigh less than 13½ ounces.

CHOICE.—Sections to be well filled; combs firmly attached; not projecting beyond the wood, and entirely capped, except the outside row next to the wood. Honey, comb, and cappings from white to amber, but not dark; wood to be well cleaned; no section in this grade to weigh less than 12 ounces.

No. 2.—This grade is composed of sections that are entirely capped, except row next to wood, weigh-

ing from ten to twelve ounces, also of such sections that weigh 12 ounces or more, and have not more than 50 uncapped cells all together, which must be filled. Combs and cappings from white to amber in color, but not dark; wood to be well cleaned.

EXTRACTED HONEY.—Must be thoroughly ripened; weigh 12 pounds per gallon. It must be well strained, and packed in new cans. It is classed as white, light amber, and amber.

STRAINED HONEY.—This is honey obtained from combs by all other means except the centrifugal extractors, and is classed as white, light amber, amber, and dark; it must be thoroughly ripened and well strained. It may be put up in cans that previously have contained honey.

COLUMBUS.—Fancy white comb is in light receipt, and selling at 17½.

THE EVANS & TURNER CO.

Columbus, O., Aug. 19.

BOSTON.—Fancy white comb honey brings 16 to 17; No. 1 ditto, 15 to 16; white extracted, 10 to 11; light amber, 9 to 10; amber, 8 to 9. Beeswax, 30.

Boston, Aug. 20.

BLAKE-LEE CO.

BUFFALO.—No change in market since last report. Arrivals of new honey are more liberal, with slow demand. We think prices will have to be lowered a little to start free buying. Fancy white comb brings 17 to 18 for No. 1.

Buffalo, N. Y., Aug. 12. W. C. TOWNSEND.

INDIANAPOLIS.—Extracted honey of finest quality in five-gallon cans is selling at 10½ to 12, according to quantity. No. 1 and fancy white comb sells for 16 to 17. Beeswax is in good demand, and producers are being paid 30 cts. per pound.

Indianapolis, Aug. 20.

WALTER S. POWDER.

CINCINNATI.—Some new honey has arrived and is selling slowly from 14 to 16 cents, according to grade and quantity. There seems to be considerable honey offered. There is only a fair demand for extracted honey, white bringing 9 to 9½; light amber in barrels, 7; in cans, 8 to 8½. Beeswax is selling slowly at \$33.00 per hundred. The above are our selling prices, not what we are paying.

Cincinnati, O., Aug. 19. C. H. W. WEBER & CO.

SCHENECTADY.—Since our last report, comb honey has come in quite freely. The quality grades mostly No. 1 clover, and sells quick at 15 cts., but dealers will take only a few cases, as they do not care to lay in a stock for fear prices will be lower later on; but as there was no stock carried over by them they are obliged to pay for present demand. Fancy white would bring a cent or two more. We have sold some dark at 12 and 13, but the supply is quite limited at this date.

CHAS. MCCULLOCH.

Schenectady, N. Y., Aug. 20.

SURE, OLD COMBS ARE VALUABLE

IF shipped to us, for rendering. . . . WE EXTRACT 99½ per cent OF WAX, and then pay you Highest Market Prices, or 2 cents additional in trade. . . . YOU CAN'T APPROACH THAT FOR PROFIT. . . . We need great quantities of Comb and Extracted Honey. . . . Write us.

THE FRED W. MUTH CO.

"The Busy Bee Men"

51 Walnut Street

Cincinnati, Ohio

SPECIAL DELIVERY

We have anticipated the needs of beekeepers for prompt delivery of supplies during the month of July, and have an unusually large stock from which to draw.

The honey-flow is promising larger than most beekeepers were prepared for, but we have sections and foundation on hand ready for instant shipment, so not a single pound of honey need be lost because of insufficient room in which to store it. Sections of all the standard sizes are here in the original packages, and we can put your name on a package of any size just as soon as your order reaches us.

You will find it will pay you, too, to use foundation liberally this season. Starters are good but full sheets are better, and you can very materially increase your honey crop by giving the bees this little assistance.

We buy honey too, and you will find us ready to give you a good price for your crop, and we can assure you of fair treatment.

Whatever your needs in the beekeeping line, we can supply them promptly, and we are glad to answer questions at any time.

Honey Reports continued from page 2.

ALBANY.—The honey demand increasing now. We quote white comb 15 to 16. Possibly we could safely quote 2 cents higher for single cases of strictly fancy in quality, style, etc. No buckwheat is appearing yet; it would sell at 13. Extracted is quiet as yet, at 8 to 9 for white clover or basswood.

Albany, N. Y., Aug. 22. H. R. WRIGHT.

KANSAS CITY.—The receipts of both comb and extracted are light, especially comb honey. We are selling our receipts of comb honey as fast as they arrive. We quote: No. 1 white comb, 24-section cases, \$3.50; No. 2, \$3.00 to \$3.25; No. 1 amber, \$3.25; No. 2, \$3.00; extracted white, per lb., 8 to 8½; extracted amber, 7 to 8. Beeswax, 25 to 28.

C. C. CLEMONS PRODUCE CO.

Kansas City, Aug. 20.

ST. LOUIS.—New comb honey commences to arrive from Southern apiaries, and choice white is selling at 16 to 17; amber, 14 to 15, and dark, 11 to 12. We have no new prices on extracted honey to report. There is a good supply and demand for choice Southern in barrels, at 7 cents, and in five-gallon cans at 7½. Beeswax is in good demand at 29 cents for prime; inferior and impure, less.

R. HARTMANN PRODUCE CO.

St. Louis, Mo., Aug. 20.

ZANESVILLE.—Honey, particularly comb, is moving a little better now than for some time past. The jobbing trade is still understocked, and now is a more favorable time for producers to unload than later; 14 to 16 cts. is being offered producers for No. 1 and fancy white-clover comb, and 8 to 8½ for best white extracted. Prices to the trade are arbitrary as yet, but grade from 19½ down, on comb, according to grade and quantity. As heretofore, producers of beeswax are offered 28 in cash or 30 in exchange for supplies.

Zanesville, O., Aug. 21. E. W. PEIRCE.

CHICAGO.—Comb honey has sold promptly upon arrival during the month, and up to this date there is none that has been on the market beyond the time necessary to get it in shape to sell. The price ranges from 17 to 18 for No. 1 to fancy white. There has not been much inquiry for the amber grades, and practically none are offered. Extracted is without change, but is not active. For clover and basswood in the 60-lb. tin cans, sales are made at 9 to 10 cts. Amber grades range from 7 to 8. Beeswax remains unchanged at from 30 to 32, if free from sediment and other foreign matter.

Chicago, Ill., Aug. 21. R. A. BURNETT & CO.

SAN FRANCISCO.—The demand for comb honey is still beyond the supply, and fancy No. 1 is still very limited, and the shipments are taken up immediately on arrival. Extracted honey, too, has come in, and several carloads have arrived, and the demand for water-white honey is beyond the supply. There is a good supply of the amber and light-amber honeys; and from present indications the demand will be met. Fancy white comb brings 16 to 17; dark to amber, 13½ to 15; river comb, 11 to 12½. Water-white extracted brings 8 to 8½; light amber, 7½ to 8; amber, 6 to 7½; lower grades, 5 to 6½. Beeswax brings 27½ to 30 for nice yellow; 23 to 26 for the dark.

San Francisco, Aug. 15. J. C. FROHLICER.

LIVERPOOL.—Since we last wrote you, there has been scarcely any inquiry for honey. The only sale of Chilean is 22 barrels at \$7.20, pile 3. California market is quiet. Thirty cases of fine sold at retail at \$11.04; Jamaican, \$6.00 to \$8.40 per cwt. is quoted; only a few barrels sold. We hope the demand will come on shortly. Other descriptions are quoted as follows: Haitien, \$5.76 to \$7.20; Peruvian, \$3.84 to \$4.80; Chilean, \$5.72 to \$8.16; Jamaican, \$6.24 to \$7.68; Californian, \$9.60 to \$10.80. Beeswax, 15 bags Chilean sold at \$37.48 to \$39.02 for medium to fine. The market is steady, but without much inquiry. Other descriptions are quoted as follows: African, \$33.16 to \$34.48; Jamaican, \$37.00; West Indies, \$32.64 to \$36.28.

Liverpool, Aug. 10.

TAYLOR & CO.

JOIN THE NATIONAL RIGHT NOW

By sending one dollar for its official organ, the BEEKEEPERS' REVIEW, from now to the end of 1913, and then after September 1 send fifty cents for membership to one of the National branches for membership to the end of 1913. This is in accordance with an action taken by the Board of Directors.

The REVIEW now has a board of three editors, thus insuring a more than "one-man" paper. What the REVIEW will have to say about the crop conditions this fall will be worth reading. Remember we have been getting crop reports from our members and subscribers, having sent a blank to each one. Send in your subscription of one dollar now, and reap all the benefits.

CARNIOLAN QUEENS SUPERIOR LINE-BRED STRAIN

Carniolans are the best bees to continue rearing brood during a dearth of nectar and through the fall months. Colonies populous with young bees stand the best chance of wintering well, other conditions being equal. September is a good time to require. Prices: Select untested, \$1.00 each; \$9.00 per dozen; select tested, \$1.50 each; \$12.00 per dozen; breeders, \$5.00.

Select untested, \$1.25; six, \$6.00; 12, \$11.00.

Safe arrival and satisfaction guaranteed.

Circular free.

Queen-breeder,

J. P. MOORE,
Route 1, MORGAN, KY.

NEW YORK.—New crop of comb honey is in good demand, and receipts are gradually getting larger, and will continue so from now on. Fancy white sells at 15 cts., with some exceptionally fine stock at 16; No. 1 at 14, No. 2 at 13, per pound, and amber at 12. No buckwheat is on the market as yet, and we do not expect any for ten days or two weeks. Extracted is in fair demand at 8½ to 9 for white clover; 7½ to 8 for fancy light amber; 7 to 7½ for amber. No change in beeswax.

LEARN BEEKEEPING from the Beginning

"First Lessons In Beekeeping" and the . . . **\$1.00**
American Bee Journal, one year, Both for Only

"First Lessons In Beekeeping" is a 190-page book telling all that the beginner need know. . . . It has an attractive paper cover, and many illustrations.

"Doolittle's Scientific Queen-rearing," and the **\$1.00**
American Bee Journal, one year, Both for Only

Doolittle's "Scientific Queen-rearing" book contains 126 pages, and is bound in leatherette with round corners. It tells in the clearest way possible just how the famous queen-breeder, Mr. G. M. Doolittle, rears the best of queen bees in perfect accord with Nature's way. As all know, Mr. Doolittle has spent some 40 years in rearing queens and producing honey. He has no superior as a queen-breeder. You can learn to rear fine queens by following his directions.

The beginner will want "First Lessons;" the older beekeeper should have "Scientific Queen-rearing." You will not regret it if you send your \$1.00 now and get either one of these books with the JOURNAL, as the JOURNAL itself is worth more than the total cost.

AMERICAN BEE JOURNAL, . . . HAMILTON, ILLINOIS

PAPER HONEY-JARS

A sanitary, substantial, waxed-paper bottle.
 Cheap enough to give away with honey.
 Sample mailed free.

Every beekeeper who produces extracted honey and is interested in building up a home market for his product, will at once be interested in this container. It is neat, does not leak, and is especially desirable for granulated honey, as jars can be filled; and after granulation takes place the consumer can remove the paper bottle, thus leaving a beautiful cone of granulated honey ready for the table. Such packages are not affected by moisture, regardless of any damp climate. The beekeeper can deliver his honey from house to house without the annoyance of

exchanging containers, and dealers and stand-keepers will make many additional sales. There are many consumers who will be glad to take home a pound or two of honey if they do not have to pay additional for the container.

The jars are now packed in uniform shipping-boxes containing one gross each, complete with stoppers and a stopper-inserter with each gross. Please note the very light weight when packed for shipment, a feature by which transportation by express is often as cheap as by freight.

PRICES

Half-pints	1 gross, \$1.50; 6 gross, \$ 8.00..	Weight per gross, 13 pounds.
Pints	1 gross, \$1.80; 6 gross, \$10.00..	Weight per gross, 18 pounds.
Quarts	1 gross, \$2.30; 6 gross, \$12.00..	Weight per gross, 28 pounds.

Perfection Tight Seal Honey-jars

Improved
Pattern
Reduced
Prices

Absolutely no leakage. No soiled labels. Desirable for granulated honey. No more rubber bands to taint the contents. Seals air-tight and prevents granulation. Handsome enough to be placed on the tea-table. A jar with no shoulders, making it easy to remove the contents. Each lid contains a wax-paper wad, and nothing could be more sanitary. The smaller jar will contain 5 ounces of honey, the middle-size 11 ounces; and the larger an exact pound. After years of experience in putting up honey for the fancy grocery trade, I have never found a jar that gives such universal satisfaction. All jars packed in corrugated shipping-boxes, which we find better and cheaper than wooden boxes. After filling with honey they can be re-shipped in same case, and the lightness of package saves freight. Breakage in transit out of the ordinary.

PRICES

Small, per gross, in corrugated cases.....	\$3.20
Medium, per gross, in corrugated cases.....	4.80
Large, per gross, in corrugated cases.....	6.00

A descriptive illustrated catalog of a full line of bee-supplies will be mailed to any one interested.

WALTER S. POWDER, 859 Massachusetts Avenue, INDIANAPOLIS, IND.

The season for honey is drawing to a close and you will now be in need of **SHIPPING - CASES**

We carry them in stock at Syracuse, N. Y., and can make prompt shipment, having just purchased a motor truck for delivering goods to the railroads. We have heretofore depended on a truckman, who did not always happen to be on hand.

READ THE CATALOG!

Has it ever occurred to you how valuable a source of information, alike for the prospective beekeeper, the beginner, and the veteran, a modern bee-supply catalog is? A careful perusal of one of these catalogs is an education in itself.

The 1912 PEIRCE catalog is one of the most complete ever issued. While every thing is listed that the experienced beekeeper would require, special information is given for the beginner as to outfits required, and numerous questions are answered for his benefit. Illustrations of the various fixtures and appliances employed in bee culture add greatly to the interest and value of the publication.

If you have ever thought that you would like to keep bees, you should certainly secure the PEIRCE ILLUSTRATED BEE CATALOG and other literature that will be sent you on request. Our correspondence bureau is also at your service, and all questions will be answered promptly and fully.

The professional apiarist, too, will find a careful examination of this catalog profitable, since it covers the whole field of his requirements, the latest improvements and inventions included. Hundreds of Central States beekeepers, and others more distantly located, are experiencing perfect satisfaction in "PEIRCE SERVICE—ROOT QUALITY," as defined in this catalog. It costs you a postal card request—that's all.

A word to those who have the catalog: Let us ship that rush order now.

7 per cent discount on cash orders during September.

EDMUND W. PEIRCE
136 West Main St., Zanesville, Ohio

We Buy Honey

If you have a large crop with no local market for the same, let us handle it for you. We buy in any quantity, large or small, and can assure you of satisfactory treatment. Send a good sample, and be sure that you tell us just how your honey is put up, and how much you have. Do not ship any honey to us without instructions, but wait until you have heard from your sample. We will offer a definite price, and give you shipping instructions.

Cans

We still have a good stock of cans, and can make instant shipment of anything in this line. Good cans and shipping cases are an absolute necessity if you would get the best prices for your honey. Even the best honey put up in poor containers will be graded as second class, and honey that in itself isn't the very best will often bring a very fair price if attractively put up.

Write us for information or advice on any beekeeping subject, and your letters will have careful attention.

A full line of Root's supplies always on hand.

TOEPPERWEIN & MAYFIELD

Corner Nolan & Cherry Streets

SAN ANTONIO, TEXAS

W. H. Laws

is now mailing queens every day except Sunday. These queens are going to almost every State in the Union. A statement in public print says, "The postoffice at Beeville has probably cancelled more stamps on queen-cages than any other postoffice in the world." Whether this is true or not, it is true that Laws' queens are giving eminent satisfaction, and old customers are continually renewing their orders.

I am breeding but the one strain of three-banded Red-clover Stock Italians. A square deal and good queens are all that I can promise. I shall be pleased to have your order, which will be filled in rotation; however, I can also take care of rush orders.

Prices: Single queen, \$1.00; six for \$5.00; 100, \$75.00.

ADDRESS PLAINLY

W. H. LAWS, BEEVILLE, TEXAS

SPECIAL OFFER on QUEENS

We have on hand about 200 tested Italian queens, one year old, that we will offer at 75 cts. each; 6 for \$4.25. These are queens from our very best stock, and will do good service for at least two more years. Young queens, untested, \$1.00 each, 6 for \$5.00; tested, \$1.25; 6 for \$6.25.

Fred Leininger & Son, Delphos, Ohio

PUBLICATIONS ON

BEE CULTURE

Please use coupon below, checking the numbers of items wanted.

The pamphlets and booklets listed below are of more than ordinary interest:

- 1 **My First Season's Experience with the Honey-bee.** By the "Spectator," of the *Outlook*, of New York. A ten-page leaflet detailing the experiences of this well-known writer. You will read the leaflet through before you lay it down. Free.
- 2 **The Bee-keeper and Fruit-grower.** A 15-page booklet giving actual facts regarding the value of bees to fruit, and showing how bee-keeping may be doubly profitable to the fruit-grower. Fruit-growers are realizing as never before the necessity of having honey-bees in close proximity to their blossoming fruit. Free.
- 3 **Bee-keeping for Sedentary Folk.** A 24-page leaflet reciting the actual experiences of an amateur bee-keeper, showing what equipment is best, points derived, etc. Free.
- 4 **Catalog of Bee-keepers' Supplies.** Our complete catalog will be mailed free to any address on request.
- 8 **Habits of the Honey-bee.** By Dr. E. F. Phillips. A somewhat scientific handling of the habits and anatomy of the bee. Price 10 cts.
- 9 **How to Keep Bees.** A book of 228 pages detailing in a most interesting manner the experience of a beginner in such a way as to help other beginners. Price \$1.00 postpaid.
- 10 **The A B C of Bee Culture.** A complete encyclopaedia of bees, of 578 pages, fully illustrated, \$1.50 postpaid; half leather, \$2.
- 11 **Cleanings in Bee Culture.** A 64-page illustrated semi-monthly magazine, the leading exponent of bee culture in this country. Ten cents per issue, but to new subscribers we will furnish it six months for 25 cts.
- 12 **Back-yard Bee-keeping.** Six interesting lessons written in readable newspaper style. Many facts to encourage the "City Bound" man or woman with the back-to-the-land longing. Free.
- 15 **Truth About Sweet Clover.** Interesting booklet of nearly 100 pages. Tells of value of sweet clover for honey, for plowing under, as fertilizers of the soil, and food for horses, cattle, swine, sheep, etc. Free.

Root's Section-Honey Boxes!

THERE have been very few years when the outlook for a bumper honey crop has been brighter than it is now—at the opening of the season of 1912. Every indication points to an almost unprecedented honey-flow, and the bee-keeper who is not making most complete preparations to reap the harvest will not be very well satisfied with himself when the surplus has all been taken off this fall, or when he knows a big flow is on and he has no sections to put on his hives.

Of course the section problem is the most important one to the comb-honey man, and it MUST be solved right. Therefore why take risks? Why run the slightest chance of getting sections of uncertain quality, or experimenting at a price you can not afford to pay? We are the largest manufacturers of Section-Honey Boxes in the world—naturally we have the finest equipment for section-making, and cut up the best lumber. We are in close touch with every phase of bee-keeping—with every department of the honey trade—therefore we know the service sections are required to give, and we make ROOT'S SECTION-HONEY BOXES to meet these requirements. Years of experience and satisfied section patrons throughout the world ought to count; and you, Mr. BEEKEEPER, if you will buy ROOT'S SECTIONS, will understand why.

PRICE LIST OF SECTIONS

4¼x4¼ Beeway Sections—2 inch, 1½, 1¼, 1¼, or 7 to foot wide.

We send 1½ style 2 beeway when your order does not specify style or width wanted.

SEVEN PER CENT DISCOUNT FOR SEPTEMBER CASH ORDERS

To those who buy now for next season, sending remittance with the order during the month of September subject to the conditions named below, we allow 7 per cent discount.

This discount will apply on all articles listed in our regular catalog at current corrected prices to date except as follows:

Tinned wire, paint, Bingham smokers, Porter bee-escapes, glass and tin honey-packages, scales, bees and queens, bee-books, papers, labels, printed matter, bushel boxes, seeds, and specialties not listed in our general catalog. Where any or all of these articles in a general order do not exceed fifteen per cent of the whole order, the discount may be deducted from the whole order, including these items which are otherwise excepted.

How to Produce Extracted Honey

THIS is the title of a neatly printed, illustrated booklet, the second edition of which has just been published. Each operation in the process of extracted-honey production is explained in detail with photographic reproductions and drawings to make the text more plain. Beginning with the chapter on "Preparing Colonies for the Honey-flow," the booklet concludes with a description of "Packages for Extracted Honey." . . . Many helpful and valuable suggestions will be found within the 44 pages this booklet contains, and it is a pleasure to announce its addition to our Bee-keepers' 10-cent Library. Order by name or specify Number 25.

Safe arrival guaranteed in United States and Canada. No foul brood here.

F. A. LOCKHART & CO., Lake George, New York.

These Remarkable
Books Practically

F R E E

We have now completed arrangements by which we offer all readers, in connection with special subscription offers, any of this great series of booklets called

“MONEY-MAKING SECRETS”

POULTRY SECRETS: First published in 1908, this collection of the carefully-guarded secrets of famous poultrymen created a sensation in poultry circles. Every secret is valuable and every one has passed severe tests of its usefulness. 64 pages, illustrated. 15th Edition, 110th thousand.

HORSE SECRETS: Compiled and written by Dr. A. S. ALEXANDER, of Wisconsin, the eminent veterinarian. Exposes the swindling methods of “gymps” and crooked dealers. Also many feeding and fattening secrets. Invaluable to horse buyers and owners. 64 pages, illustrated. 9th Edition, 85th thousand.

THE MILLION EGG FARM: Describing the enormous business and plant of J. M. Foster's Rancocas Farm, where 18,000 laying hens produced last year the amazing total of 1,121,478 eggs. Written 'specially for beginners. 80 pages, profusely illustrated. 4th Edition. 35th thousand.

THE CURTISS POULTRY BOOK: The story of the Curtiss brothers and their great Niagara Farm, built up from nothing to an annual business approximating \$100,000 per year. Ducks, eggs, broilers, and cut clover are their staples. A remarkable story. 56 pages, illustrated. 3rd Edition, 30th thousand.

DRESSMAKING SELF-TAUGHT: For girls and women who wish to learn dressmaking quickly and thoroughly, either for making their own clothes or as a business. Twenty lessons by an expert. Clear, comprehensive, practical. new. 64 pages with diagrams.

DUCK DOLLARS: There is money in ducks. The Weber brothers market about 40,000 ducklings each year, and make a clear net profit of 50 cents on each one. This new booklet tells exactly how, with valuable advice for beginners as to operation and markets. 88 pages, illustrated.

FALL-BEARING STRAWBERRY SECRETS: The first complete hand-book covering the culture of this wonderful new fruit. Any one who can raise June strawberries can raise the Fall-bearers, but culture is different. Those who started first are reaping the high market profits. 64 pages, illustrated.

TURKEY SECRETS: The way to make turkeys a profitable farm crop, as demonstrated by HORACE VORSE of Rhode Island, the veteran turkey raiser who supplies the turkey for the President's Thanksgiving dinner each year. Instructive and enlightening. 64 pages, freely illustrated.

GARDEN GOLD: A new booklet written for people with small gardens, showing how to raise your own vegetables in these days of high prices, and SAVE money. And how to MAKE money by selling your surplus. Splendid for people with back yards only. 64 pages, illustrated.

SHALL I FARM? For city people trying to decide whether or not to go to the country. No golden promises, but a clear, impartial, unbiased, unprejudiced weighing of the subject. All the advantages and disadvantages of all kinds of farming plainly set forth. Nothing like it ever before printed. 64 pages.

So popular are these booklets, and so valuable their contents, that nearly

400,000 COPIES HAVE BEEN SOLD

during the last three years. Each is the very latest word in its own particular field—together they cover new discoveries, secret methods, exposures, new systems, little known information, and astonishing achievements in many lines.

We Offer { Any one of these booklets, postpaid } All three for \$1.00
{ (Your Choice), “GLEANINGS,” 1 year, }
{ FARM JOURNAL, till December, 1915 }

\$1.50 to subscribers in Canada, Philadelphia, and foreign countries, on account of extra postage. Extra booklets, 20c. each. Booklet and papers may go to different addresses if necessary, but these

BOOKLETS CANNOT BE OBTAINED SEPARATELY—ONLY IN THIS COMBINATION.

THIS PAPER is well known to you, and requires no description or praise here.

The FARM JOURNAL is the standard farm and home paper—foremost in the world. It has more than 750,000 subscribers. It is up-to-date, clean, boiled-down, honest. It knows what to say, and can stop when it has said it. It is for the poultryman, gardener, horse owner, dairyman, grain grower, fruitman, the farmer, the villager, the suburbanite, the man who lives in the country, and those who would like to, the women folks, the boys and girls. In short, it is for YOU. Cheerful, entertaining, intensely practical, absolutely clean. When the time is up it will stop.

FOR SALE.—In September, 260 stands of bees; very heavy; run for comb honey; located in sweet clover and alfalfa. F. J. FARR, Rt. 4, box 5, Blackfoot, Idaho.

Queens from Georgia; blacks and hybrids. Three for \$1.00. Tested red-clover Italians, \$1.00 each. Safe arrival guaranteed. JOHN W. CASH, Bogart, Ga.

Hardy northern-grown queens of Moore's strain of Italians, ready for prompt shipment. Untested, \$1.00; 6 for \$5.00; 12 for \$9.00. Write for lots of 50 or more. P. B. RAMER, Harmony, Minn.

FOR SALE.—Golden queens, remainder of season, 60 cts. each for untested; 90 cts. each for tested. Safe arrival and perfect satisfaction guaranteed. R. O. COX, Box 8, Garland, Ala.

FOR SALE.—Italian queens, untested, 75c.; tested, \$1.00. Bees by the pound, nucleus, or full colonies. Red-clover bees.

EUGENE S. WATSON, Rt. 2, Madison, Me.

Colonies of Italian bees in L. hives, 10-fr., built on full brood-frames, wired, body and shallow super, redwood, dovetailed, three coats white sheeted lids; each neat, modern, and full of stores—any time. JOS. WALRATH, Antioch, Cal.

FOR SALE.—A limited number of high-class Italian queens; untested, \$1.00; doz., \$10.00; best breeders, \$5.00; hybrid queens, 50 cts. each; no disease. WILMER CLARKE, Box 397, Earlville, Mad. Co., N.Y.

Fine select 3 and 5 banded queens, only 75 cts., by return mail; also 225 stands of Italian bees in ten-frame D. hives at a bargain; only \$3.90 per stand if taken on stand. J. L. FAJEN, Stover, Mo.

Golden Italian queens that produce golden bees, the brightest kind. Gentle, and as good honey-gatherers as can be found. Each, \$1.00; six, \$5.00; tested, \$2.00; breeders, \$5.00 to \$10.00. J. B. BROCKWELL, Barnetts, Va.

Golden and three-banded Italian queens. Tested, \$1.00 each; 3 for \$2.75; 6 or more, 85 cts. each. Untested, one, 75 cts.; 3, \$2.00; 6 or more, 65 cts. each. There is no disease here. Bees, per lb., \$1.00; nuclei, per frame, \$1.25. C. B. BANKSTON, Buffalo, Leon Co., Texas.

Fine Italian queens from hardy industrious stock; quiet to handle, good comb-builders, and white capers. Nothing but selected stock used for breeding. Guaranteed free from disease. Untested, 75 cts.; select untested, \$1.00; select tested, \$1.50.

A. J. SEAVEY, Rt. 2, Farmington, Me.

FOR SALE.—Moore's strain and golden Italian queens, untested, \$1.00; six, \$5.00; twelve, \$9.00. Carniolan, Banat, and Caucasian queens, select, \$1.25; six, \$6.00; twelve, \$10.00. Tested, any kind, \$1.50; six, \$8.00. Choice breeders, \$3.00. Circular free. W. H. RAILS, Orange, Cal.

FOR SALE.—800 colonies of Italian bees, more or less, situated in five yards; all in good condition, on this beautiful island of Jamaica, a land of perpetual sunshine; flowers nearly the whole year round; good investment for a practical up-to-date beekeeper to take hold of now. Write for further particulars to DAVID MARCHALLECK, Morant Bay, Jamaica.

FOR SALE.—Italian queens, bred from the best honey-gathering strains obtainable. Untested, 75 cts.; select, \$1.00; tested, \$1.25; select tested, \$1.50. Nuclei without queen, one frame, \$1.50; two-frame, \$2.00; three-frame, \$2.75. For queens and nuclei in quantity lots, and bees by the pound, write for prices and circular. Virgin queens from my best breeders, 40 cts. each; three for \$1.00. ROBT. B. SPICER, Wharton, N. J.

FOR SALE.—Famous North Carolina-bred Italian queens; bred for honey-gathering; long-lived; prolific; hardy; beautiful. My bees are superior honey-gatherers. My queens give satisfaction. I have the Root-Moore strain, Davis', Quirin's, Laws' choice imported breeders to get my fine honey-gathering strain from. I had a fine breeder I sold to Hon. W. C. Fleming, of Greensboro, N. C., last year. He says her bees produced over 200 pounds of choice comb honey last May. His price on her was \$20. I rear all cells in two-story colonies running over with bees at all times. I don't rear any thing but red-clover and golden. No foul brood. Untested, 75c.; dozen, \$7.00; tested, \$1.25; select tested, \$1.50; extra select tested, \$2.00; breeders, \$3.00 and \$5.00. H. B. MURRAY, Liberty, N. C.

WANTS AND EXCHANGES

WANTED.—To exchange sweet-clover seed for quantity of queens. Sept. delivery. Write.
DE. M. A. AULICK, Bradford, Ky.

WANTED.—To exchange Root bee supplies, either for money or honey. Catalog.
E. W. PEIRCE, Zanesville, Ohio.

MISCELLANEOUS

FOR SALE.—Professional photographers' portrait camera and stand, lens, aplamat, B No. 5, 13x11. If you want to get a good outfit cheap, address
C. B. MASON, Butler, Indiana.

PIGEONS! PIGEONS!—Thousands, all breeds; many satisfied customers everywhere; start with our money-making pigeons. Large free illustrated matter.
PROV. SQUAB CO., Providence, R. I.

REAL ESTATE

WANTED.—An apiary in the Arkansas Valley, or a partner in a carload. R. S. BECKTELL, Rifle, Col.

WANTED.—To exchange 190 acres and 30-room hotel for bees and supplies of honey.
ERNEST W. FOX, Clint, Texas.

FOR SALE.—One 20-acre farm; 130 colonies of bees; no better honey locality in Wisconsin.
LEWIS FRANCISCO, Mosinee, Wis.

WANTED.—About 100 hives, bees, and location in California.
A. GARDNER, General Delivery, Los Angeles, Cal.

FOR SALE.—A clean established apiary, located near river and railroad depot in this city. A bargain.
H. C. ADLER, Victoria, Texas.

WANTED.—To rent an apiary of from 200 to 300 colonies for the season of 1913. For further particulars address
VERN O. DERBY, Box 16, Wileyville, W. Va.

WANTED.—Small California property in good bee locality; or will work on shares or salary. State full proposal in first letter.
J. PROBST, Florence, N. J.

FOR SALE.—Excellent farm and bee locations in this "wonderful fruit and summerland." Rich variety of food. Improved farms, \$12.00 to \$150.00 per acre. Send for booklet.
EDWARD PAYSON, Traverse City, Mich.

FOR SALE.—Apiary of 105 colonies of bees, with or without location; $\frac{3}{4}$ of an acre of ground in the edge of village, and planted to all kinds of fruit; about 40 trees are now bearing. Beeyard is enclosed with six-foot tight fence, which is lined inside with grapevines, currants, gooseberries, and blackberries. Frame shop and honey-house $1\frac{1}{2}$ story; 65-barrel cistern; corn-crib; chicken and hog yards; every thing one needs but dwelling house. This would be a fine location for a queen-breeder—not over a dozen colonies of bees within $1\frac{1}{2}$ miles of the yard. No disease, and have never had any. The bees are all in good shape; hives as good as new; combs built on Hoffman frames; wired foundation, except possibly 100 frames. I spent \$500 in fitting up my yard, not counting my labor. Land sells here from \$200 to \$400 per acre. I am nine miles below Zanesville, on the Muskingum River, overflowing creek and river bottoms west, south, and east of me. The location is No. 1; I have had but one failure in 21 years that I have kept bees; good market for honey near. My crop is sold, and not all off yet, at \$3.75 per case. Any one buying the property will get good hive-stands, what winter cases I have, shade-boards, cushions, etc. I will take \$1000 for ground and bees, and a low price for extras, or will sell the bees, to be moved, for \$500.
J. F. TRUESDELL, Duncan's Falls, O.

INDIAN RUNNER DUCKS

White Indian Runner duck eggs. High fertility guaranteed. Running water.
OTTO WESTFELT, Halcyon, Cal.

Fawn and White Indian Runner duck eggs, \$1.00 per 11; \$7.00 per 100. Day-old ducklings, 25 cts. each. Mating-list free.
KENT JENNINGS, Mt. Gilead, O.

INDIAN RUNNER DUCKS, American Standard light fawn and white. I have a fine lot of one-year-old breeders for sale at a real bargain price. I can start you, and start you with the best. Write me.
C. O. YOST, Rt. 4, Box D, Winchester, Ind.

BEEKEEPERS DIRECTORY

Nutmeg Italian queens, leather color, after June 1, \$1.00.
A. W. YATES, Hartford, Ct.

Well-bred bees and queens. Hives and supplies.
J. H. M. COOK, 70 Cortlandt St., New York.

Improved golden-yellow Italian queens for 1912; beautiful, hustling, gentle workers. Send for price list to
E. E. LAWRENCE, Doniphan, Mo.

QUEENS.—Improved red-clover Italians, bred for business; June 1 to Nov. 15, untested queens, 75 cts.; select, \$1.00; tested, \$1.25 each. Safe arrival and satisfaction guaranteed.
H. C. CLEMONS, Boyd, Ky.

QUIRIN's famous improved Italian queens, nuclei, colonies, and bees by the pound, ready in May. Our stock is Northern-bred and hardy; five yards wintered on summer stands in 1908 and 1909 without a single loss. For prices, send for circular.
QUIRIN-THE-QUEEN-BREEDER, Bellevue, O.

SPECIAL NOTICES

BY OUR BUSINESS MANAGER

WHEELBARROW WHEELS.

In our notice of wheels in last issue the diameter is given 28 inches when it should read 20 inches. The error was not discovered till the edition was printed.

QUEENS.

This is the height of the breeding season with us, and we are prepared now to give exceptionally good service on orders for queens. Quantity orders filled at any time and for any number. All orders filled with the unexcelled Root strain. Queens reared from the best breeding stock, and mated in our own yards, where we carefully control drone production, insuring pure matings of young queens. Untested queens, \$1.00 each; a discount of five per cent on lots of 12 to 25; ten per cent on lots of 25 to 50; \$75.00 for 100. Two hundred for \$140.00. Three hundred for \$180.00. Safe delivery guaranteed in the United States and Canada.

SHIPPING-CASES, SECOND-HAND, NAILED UP.

We have an accumulation of second-hand shipping-cases from which comb honey has been sold or repacked. Some of them are of our own make, and practically as good as new, while more of them are western-made pine cases, somewhat rougher than our make, and not so desirable. We have tried to price them according to their value. The list available is as follows, and offered while they last:

126 cases, 10 $\frac{1}{2}$ -inch, 4-row, for 24 sections, 4 $\frac{1}{4}$ x7-to-foot or 1 $\frac{1}{4}$; \$1.20 for 10; \$5.50 for 50; \$10.00 for 100; \$12.00 for the lot.

406 cases, 11 $\frac{1}{2}$ -inch, 4-row, for 24 sections, 4 $\frac{1}{4}$ x1 $\frac{1}{2}$; \$1.20 for 10; \$5.50 for 50; \$10.00 for 100. About two-thirds of these have a wooden slide in place of glass, and will be sold at 2 cts. each less without the glass.

96 cases, 12-inch, 4-row, for 24 sections, 4 $\frac{1}{4}$ x1 $\frac{1}{2}$ to 2-inch; \$1.20 for 10; \$5.50 for 50; \$9.50 for lot.

189 cases for 24 sections, 4x5x1½; \$1.30 for 10; \$6.00 for 50; \$11.00 for 100; \$19.00 for lot.
 55 cases for 24 sections, 3½x5x1½; \$1.30 for 10; \$6.00 for lot.
 1 case for 24 sections, 4¼x4¼x1½; \$1.40 for 10; \$3.00 for lot.
 Most cases include glass. If wanted in carriers, add 5 cts. per case to cover cost of carrier.

OLD-STYLE EXTRACTORS.

We have a few extractors which we offer at bargain prices because they are not of our latest pattern. They do not have ball-bearings, die-molded gears, nor the slip-gear device. Otherwise they are new machines which sold for much higher prices than we ask for them now to close out. They are located at different branch offices, and are offered at the prices named for shipment direct from the office where they are now stored.

At Des Moines, Iowa, 4 No. 15 Cowan, L. size two-frame machines, offered at \$9.00 each, and one No. 17 Cowan with 12-inch comb-pockets, offered at \$7.00.

At Mechanic Falls, Me., 4 No. 15 Cowan, L. size two-frame machines offered at \$9.00 each, and 2 No. 4 Novice for short frames, 13 inches or less in depth, and 1¾ inches in width or less, offered at \$7.00 each.

At Syracuse, N. Y., 3 No. 15 Cowan, L. size, two-frame, offered at \$9.00 each. One No. 5 Novice, L. size, two-frame, offered at \$7.00.

At New York, one No. 17 Cowan, two-frame, with 12-inch comb-pockets, offered for \$10.00.

At Philadelphia, Pa., one No. 17 Cowan two-frame, offered for \$10.00. One No. 18 Cowan, two-frame, with 12½-inch comb-pockets, offered for \$10.50. One No. 25 Cowan four frame, L. size, offered for \$16.00.

At Washington, D. C., one No. 15 Root Automatic, L. size; price \$10.00.

SHIPPING-CASES AT BARGAIN PRICES.

We have dropped from our catalog certain sizes of shipping-cases while we still have some of them in stock. We are making changes in some other styles, and desire to close out what stock we have of older patterns. For these reasons we offer the following cases, while stock lasts, at special prices. If you do not see in the list what you want, write to us, advising the number and size wanted, and we will quote you.

16-lb. two-row cases to hold 16 sections, 4¼x1½.
 24 crates of 50 each, with two-inch glass; price \$5.00 per crate.

10 crates of 10 each; price \$1.00 per crate.
 6 crates of 50 each, with three-inch glass; price \$5.25 per crate.

12-lb. two-row cases to hold 12 sections 4¼x1½.
 26 crates of 50 each, with three-inch glass; price \$4.50 per crate.

For 12 sections 4¼x1½ or 10 sections 4¼x1½.
 10 crates of 50 each, with two-inch glass; price \$4.00 per crate.

10 crates of 50 each, with three-inch glass; price \$4.25 per crate.

12-lb. three-row cases to hold 12 sections 4¼x1½.
 52 crates of 50 each, with three-inch glass; price \$5.25 per crate.

20 crates of 50 each, with two-inch glass; \$5.00 per crate.

12-lb. three-row cases to hold 12 sections 4¼x1½.
 22 crates of 50 each, with two-inch glass; price \$4.75 per crate.

15 crates of 50 each, with three-inch glass; price \$5.00 per crate.

11 crates, 10 each, with three-inch glass; price \$1.00 per crate.

24-lb. four-row cases for 24 sections 4¼x1½, or 20 sections 4¼x1½.
 25 crates of 50 each, with three-inch glass; price \$7.50 per crate.

8 crates of 10 each, with two-inch glass; price \$1.60 per crate.

Cases for 20 sections 4x5x1½.
 7 crates of 50 each, with three-inch glass; \$6.50 per crate.

Cases for 12 sections 4x5x1½.
 14 crates of 50 each, with three-inch glass; \$5.00 per crate.

Cases for 12 sections 3½x5x1½.
 16 crates of 50 each, with three-inch glass; \$5.00 per crate.

24-lb. cases for 24 sections 4¼x1½.
 66 crates of 50 each, with two-inch glass; \$8.00 per crate.

This stock is at Medina. We also have some stock of similar cases at other offices which we will furnish at same prices, while they last, on orders specifying these prices.

SPECIAL NOTICES

A. I. ROOT

MR. HENRY WOODWORTH, JR., OF CHEBOYGAN, MICH., AND HIS BUTTERCUP CHICKENS.

The above person had an advertisement in our journal for April 15, May 1 and 15, and June 1; and he not only has failed to give satisfaction, but refuses to answer letters from his customers after he has received their money. We have written him repeatedly, but can get no reply whatever. Now, if any of our readers have lost money by this individual, we should be glad to hear from such; and if any of you have had satisfactory deal with him we should be glad to know that also.

PARCELS POST AT HOME, AS WELL AS PARCELS POST ABROAD.

With all the clamor about parcels post of late, I have not seen a word about giving the United States as good a chance as we give to almost all foreign nations. What is the reason we can not send packages to the next town as cheaply as we send them to Europe, Asia, or Africa? With the "Zone" and other schemes it is very evident that the express companies are continually getting a finger in the pie, and handicapping any thing that threatens to cut down their profits. Are the express companies really running things, or is it the working people, who are endeavoring to make a short cut between producer and consumer?

WOMAN SUFFRAGE, ETC.

Mrs. Root very seldom dictates or even suggests what I ought to say to the people. Of course, she sometimes rules out what I might say if it were not for her gentle protest. But she has just said that she was surprised that I had so little to say in regard to letting the mothers of our land, as well as other good women, have a voice in framing and enforcing our laws. *By all means* let the women vote; and after they get to voting I feel quite sure that Professor Thorne, of our Ohio Experiment Station, will not be obliged to admit that *two-thirds* if not *four-fifths* of the voters, are users of tobacco. I am sure the *mothers* will set a good example before their boys, even if the *fathers* do not always do so.

Convention Notices.

A beekeepers' meeting and picnic will be held Saturday, Sept. 7, at the home of A. F. Foster, 21st and Arapahoe Streets, Boulder, Colo. Every one interested in bees in Northern Colorado is invited. Come and get acquainted, and hear some of the best beekeepers in the country tell of their methods. Morning and afternoon sessions. Picnic lunch.

Several of the largest honey-producers of the State have arranged to club together and put up a mammoth exhibit of honey and bees in the name of the Kansas State Beekeepers' Association at Hutchinson, Sept. 14—21. On account of its central location it is planned to make this a sort of headquarters for honey exhibitors. Any one desiring space should address Mr. J. J. Measer, Sup't Apiary Department, Hutchinson, Kan.
 Topeka, Kan. O. A. KEENE, Sec.

The Kansas beekeepers will hold a meeting at Hutchinson, on Thursday, Sept. 19. Mr. C. P. Dadant will deliver an address on bees. It is hardly necessary to remind beekeepers that Mr. Dadant is one of the greatest authorities on bees that we have. This meeting will be held during the State Fair there, and all beekeepers are urged to attend. This is not the regular annual meeting of the Kansas State Beekeepers' Association. That will be held in Topeka about Jan. 15.
 Topeka, Kan., Aug. 18. O. A. KEENE, Sec.

HONEY LABELS

There is nothing that adds more to the attractiveness of a honey package than a neat label carefully worded and of the proper style. The guarantee of purity by the producer put on every package he offers for sale is the best protection he can get from the stories of adulteration that injure the sale of his product.

For glass packages a small label is generally preferred, while for tin, one that laps around the package is considered best. We supply both gummed and ungummed labels. We recommend the ungummed, however, for they adhere more readily when pasted on a package, and are not affected by changes in the atmosphere as are the gummed.

We give on the opposite page a few illustrations of some of our stock patterns. These are printed, some of them in two or more colors, some in bronze on glazed paper, and some in black on glazed paper. To get a very adequate idea of these you ought to see samples printed on regular label stock in the proper colors. We have a catalog which shows just what we can furnish in this line, and we shall be glad to send it on request.

Just now we can give very prompt attention to orders for this label work. We can furnish special labels too if you tell us what you want. Of course the price is higher than for our regular patterns; but if you are buying them in very large quantities you may want something to suit your individual tastes. Let us do your label work for you, for we can guarantee satisfaction.

The A. I. Root Co., Medina, O.

No. 90.—Bronze on glazed paper, same price as No. 89.

No. 89.—Bronze on glazed paper, 250, \$1.00; 500, \$1.50; 1000, \$2.25; 2000, \$4.00.

Wording on all labels changed to suit. Labels trimmed to margin. Above prices are on ungummed stock.

No. 94.—Bronze on glazed paper, 250, 90c.; 500, \$1.50; 1000, \$2.00; 2000, \$3.50.

No. 91.—Bronze on glazed paper, 250, \$1.00; 500, \$1.50; 1000, \$2.25; 2000 \$4.00.

ROOT'S BEEKEEPERS SUPPLIES

You may have a catalog of supplies; but if you haven't ours for 1912 you have missed something really worth while, and should get one at once. It is the largest and most complete ever published—more than a mere price list of supplies—a book that every beekeeper can read with pleasure and profit. Beginners will find answers to many perplexing questions, and advanced beekeepers timely suggestions that will save them money. Old customers are writing us frequently letters like the following:

Your catalog for 1912, designated ROOT'S BEEKEEPERS' SUPPLIES, is received, and I certainly thank you for this book. I have had your catalog on my desk for years, and have used Root's supplies all along. I note the enlargement and improvement in your new catalog, and notice many things I expect to add to my apiary.
Crystal City, Texas. C. W. Cox.

Our catalog this season also gives a full and complete list of books and booklets which we can supply. Many of these booklets are free, which doesn't mean that they are not worth reading, but simply that we want you to be informed on the subjects of which they treat. Send for a catalog, and check those in which you are interested.

Quick Deliveries

Next to having the best goods made, there is nothing so important to the beekeeper in the busy season as to have goods delivered just when they are wanted most. It isn't always possible to ship goods from a distant factory and have them reach destination within a day or two, as is sometimes necessary during the height of the season, but with distributing-houses located in the large shipping-centers we are able to supply beekeepers everywhere, with no loss of time and with minimum transportation charges.

Send Your Hurry Orders

to any one of the offices listed below, and let us show you what we can do for you in point of service. Cars are going to these branches at the rate of two or three a week, so the stocks are new and fresh, and we usually have just what you want. If it isn't in stock at your nearest branch our manager will include your order with his specifications and you may have your goods come in the next car, thereby saving on transportation charges and getting the goods in better shape than you would by local freight.

Whatever You Wants

we can supply you, and, of course, there is no question about the quality of our goods. The name "Root" in connection with bee-supplies means the best of every thing in this line, and the best is always the cheapest, as our customers will testify. If you have never used our supplies you should make a trial of them this season. Once used, we are sure you will want no other.

I have just received my goods, order No. 10739. I am more than pleased with them. I had intended to make my hives, but when I received the sample hive and saw the No. 1 pine lumber from which it was made, and considering the workmanship, I am satisfied I can buy cheaper than I can make them; enough cheaper to save the price of the lumber.

PROTECTION HIVE

The best and lowest-priced double-wall hive on the market. This hive has $\frac{1}{2}$ material in the outer wall, and is not cheaply constructed of $\frac{3}{4}$ material as are some other hives on the market. Packing or dead-air space as you prefer. Remember, winter is approaching. Get your bees into comfortable quarters before it is here. Send for a catalog.

A. G. WOODMAN CO., GRAND RAPIDS, MICH.

HONEY MARKETS

The prices listed below are intended to represent, as nearly as possible, the average market prices at which honey and beeswax are selling at the time of the report in the city mentioned. Unless otherwise stated, this is the price at which sales are being made by commission merchants or by producers direct to the retail merchants. When sales are made by commission merchants the usual commission (from five to ten per cent), cartage, and freight will be deducted; and in addition there is often a charge for storing by the commission merchant. When sales are made by the producer direct to the retailer, commission and storage and other charges are eliminated. Sales made to wholesale houses are usually about ten per cent less than those to retail merchants.

EASTERN GRADING RULES FOR COMB HONEY.

FANCY.—All sections well filled, combs straight, firmly attached to all four sides, the combs unsoiled by travel-stain or otherwise, all the cells sealed except an occasional one, the outside surface of the wood well scraped of propolis.

A No. 1.—All sections well filled except the row of cells next to the wood; combs straight; one-eighth part of comb surface soiled, or the entire surface slightly soiled; the outside surface of the wood well scraped of propolis.

No. 1.—All sections well filled except the row of cells next to the wood; combs straight; one-eighth part of the comb surface soiled, or the entire surface slightly soiled.

No. 2.—Three-fourths of the total surface must be filled and sealed.

No. 3.—Must weigh at least half as much as a full-weight section.

In addition to this the honey is to be classified according to color, using the terms white, amber, and dark; that is, there will be "Fancy white," "No. 1 dark," etc.

NEW HONEY-GRADING RULES ADOPTED BY THE COLORADO STATE BEEKEEPERS' ASSOCIATION, DECEMBER 13, 1911.

FANCY WHITE.—Sections to be well filled, comb firmly attached on all sides and evenly capped, except the outside row next to the wood. Honey, combs, and cappings white, and not projecting beyond the wood. Wood to be well cleaned; no section in this grade to weigh less than $13\frac{1}{2}$ ounces.

No. 1.—Sections to be well filled, combs firmly attached on all sides and evenly capped, except the outside row next to the wood. Honey white or very light amber; comb and cappings from white to slightly off color. Comb not projecting beyond the wood; wood to be well cleaned; no section in this grade to weigh less than $13\frac{1}{2}$ ounces.

CHOICE.—Sections to be well filled; combs firmly attached; not projecting beyond the wood, and entirely capped, except the outside row next to the wood. Honey, comb, and cappings from white to amber, but not dark; wood to be well cleaned; no section in this grade to weigh less than 12 ounces.

No. 2.—This grade is composed of sections that are entirely capped, except row next to wood, weigh-

ing from ten to twelve ounces, also of such sections that weigh 12 ounces or more, and have not more than 50 uncapped cells all together, which must be filled. Combs and cappings from white to amber in color, but not dark; wood to be well cleaned.

EXTRACTED HONEY.—Must be thoroughly ripened; weigh 12 pounds per gallon. It must be well strained, and packed in new cans. It is classed as white, light amber, and amber.

STRAINED HONEY.—This is honey obtained from combs by all other means except the centrifugal extractors, and is classed as white, light amber, amber, and dark; it must be thoroughly ripened and well strained. It may be put up in cans that previously have contained honey.

BOSTON.—We quote fancy white comb at 16 to 17; No. 1 white comb, 15 to 16; fancy white extracted, 10 to 11; light amber, 9 to 10; amber, 8. Beeswax, 30.

Boston, Sept. 5.

BLAKE-LEE CO.

INDIANAPOLIS.—Extracted honey of finest quality in five-gallon cans is selling at $10\frac{1}{2}$ to 12, according to quantity. No. 1 and fancy white comb sells for 16 to 17. Beeswax is in good demand and producers are being paid 30 cts. per pound.

Indianapolis, Sept. 6.

WALTER S. POWDER.

CHICAGO.—The market for honey continues to be active, especially for the comb. We are obtaining from 17 to 18 cts. per lb. for the A No. 1 to fancy grades, and there is not enough to supply the demand. Extracted honey is not active, and sells at from 9 to 10 for the best grades of white, and 7 to 8 for the light ambers. Beeswax is steady at from 30 to 32, according to color and cleanliness.

Chicago, Sept. 3.

R. A. BURNETT & CO.

ALBANY.—Honey demand increasing as season advances. We quote white comb 15 to 16 for choice to fancy. We could make small sales at a little higher price if of fancy quality. There is a sharp demand for honey in the right kind of cartons, also for buckwheat honey, but none comes in, and we understand crop of buckwheat will be very short in this vicinity. Could sell at 13c now. Extracted quiet, 8 to 9 cts. for white clover and basswood.

Albany, Sept. 5.

H. R. WRIGHT.

CINCINNATI.—The demand for honey is good, although many of the big buyers refuse to pay last year's prices, and it is an effort on our part to sustain the prices of to-day. We are selling fancy comb honey in a small way from our store at $16\frac{1}{2}$ to 18, and in a wholesale way at a few cents a pound less, according to the quantity purchased. Strictly fancy extracted honey in crates of two 60-lb. cans we are selling at $8\frac{1}{2}$ to 10, and in barrel lots at $8\frac{1}{2}$ and sometimes 9; amber honey in barrels at 6 to $7\frac{1}{2}$. For choice bright yellow beeswax we are paying 28 cts. per lb. in cash or 30 in trade.

Cincinnati, O., Sept. 3. THE FRED W. MUTH CO.

SURE, OLD COMBS ARE VALUABLE

IF shipped to us for rendering. . . WE EXTRACT 99½ per cent OF WAX, and then pay you Highest Market Prices, or 2 cents additional in trade. . . . YOU CAN'T APPROACH THAT FOR PROFIT. . . . We need great quantities of Comb and Extracted Honey. . . Write us.

THE FRED W. MUTH CO.

"The Busy Bee Men"

51 Walnut Street

Cincinnati, Ohio

SPECIAL DELIVERY

We have anticipated the needs of beekeepers for prompt delivery of supplies during the month of July, and have an unusually large stock from which to draw.

The honey-flow is promising larger than most beekeepers were prepared for, but we have sections and foundation on hand ready for instant shipment, so not a single pound of honey need be lost because of insufficient room in which to store it. Sections of all the standard sizes are here in the original packages, and we can put your name on a package of any size just as soon as your order reaches us.

You will find it will pay you, too, to use foundation liberally this season. Starters are good but full sheets are better, and you can very materially increase your honey crop by giving the bees this little assistance.

We buy honey too, and you will find us ready to give you a good price for your crop, and we can assure you of fair treatment.

Whatever your needs in the beekeeping line, we can supply them promptly, and we are glad to answer questions at any time.

APPLE GROWING

The healthier the tree, the better the fruit. The longer trees are sprayed with "SCALECIDE" the more beautiful, healthful and fruitful they become. "SCALECIDE" is the acknowledged leader of all soluble oils—the only one containing distinct fungicidal properties. "SCALECIDE" will positively kill all soft-bodied sucking insects without injury to the tree. Let us prove these statements. Send today for free booklet "SCALECIDE—the Tree Saver." Address B. G. PRATT CO., Mfg. Chemists, 50 Church St., N. Y. City.

FINE ITALIAN QUEENS BY RETURN MAIL

3 and 5 banded, only 75c; extra fine, \$1.00; 200 stands Italian bees at a bargain.

SEND your PHOTOGRAPH and \$1.50 and we will send a fine engraving from it, suitable for stationery or circulars.
GRAY PTC. CO., Fostoria, Ohio.

HOW TO KEEP BEES

By ANNA BOTSFORD COMSTOCK

THIS is an excellent book for the beginner. Nothing better. We cordially recommend it to all who are learning bee-keeping by their own effort. Having commenced bee-keeping three times, the talented author is in a position to furnish the right kind of advice. You can not go wrong in ordering this book. It is charmingly written and easily understood. Price \$1.10 postpaid by THE A. I. ROOT COMPANY, MEDINA, OHIO

QUEENS

and bees—an improved superior strain of Italians is what QUIRIN RAISES. All yards winter on summer stands with practically no loss. Our stock is hardy, and will ward off brood diseases.

In the spring of 1899 we sent fifty nuclei to J. D. Nixon, Lafarge, Wis., and on July 20th (same year) he wrote us, saying they did just splendid, as at that writing they had already filled their supers, and that he would have to extract them. We have files of testimonials similar to the above.

Prices for rest of season	1	6	12
Select queens	\$ 75	\$ 4 00	\$ 7 00
Tested queens	1 00	5 00	9 00
Select tested queens	1 50	8 00	15 00
Breeders	3 00	15 00	

Queens on hand ready to mail. Safe delivery and pure mating guaranteed. Over 20 yrs. a breeder. Testimonials and circular free.

LEARN BEEKEEPING from the Beginning

"First Lessons In Beekeeping" and the . . . **\$1.00**
American Bee Journal, one year, Both for Only

"First Lessons in Beekeeping" is a 190-page book telling all that the beginner need know. . . . It has an attractive paper cover, and many illustrations.

"Doolittle's Scientific Queen-rearing," and the . . . **\$1.00**
American Bee Journal, one year, Both for Only

Doolittle's "Scientific Queen-rearing" book contains 126 pages, and is bound in leatherette with round corners. It tells in the clearest way possible just how the famous queen-breeder, Mr. G. M. Doolittle, rears the best of queen bees in perfect accord with Nature's way. As all know, Mr. Doolittle has spent some 40 years in rearing queens and producing honey. He has no superior as a queen-breeder. You can learn to rear fine queens by following his directions.

The beginner will want "First Lessons;" the older beekeeper should have "Scientific Queen-rearing." You will not regret it if you send your \$1.00 now and get either one of these books with the JOURNAL, as the JOURNAL itself is worth more than the total cost.

AMERICAN BEE JOURNAL, . . . HAMILTON, ILLINOIS

PAPER HONEY-JARS

**A sanitary, substantial, waxed-paper bottle.
Cheap enough to give away with honey.
Sample mailed free.**

Every beekeeper who produces extracted honey and is interested in building up a home market for his product will at once be interested in this container. It is neat, does not leak, and is especially desirable for granulated honey, as jars can be filled and after granulation takes places the consumer can remove the paper bottle, thus leaving a beautiful cone of granulated honey ready for the table. Such packages are not affected by moisture, regardless of any damp climate. The beekeeper can deliver his honey from house to house without the annoyance of

exchanging containers, and dealers and stand-keepers will make many additional sales. There are many consumers who will be glad to take home a pound or two of honey if they do not have to pay additional for the container.

The jars are now packed in uniform shipping-boxes containing one gross each, complete with stoppers and a stopper-inserter with each gross. Please note the very light weight when packed for shipment, a feature by which transportation by express is often as cheap as by freight.

PRICES

Half pints.	1 gross, \$1.50; 6 gross, \$ 8.00	Weight per gross, 13 pounds.
Pints.	1 gross, \$1.80; 6 gross, \$10.00	Weight per gross, 18 pounds.
Quarts.	1 gross, \$2.30; 6 gross, \$12.00	Weight per gross, 28 pounds.

**Perfection
Tight Seal
Honey-jars**

**Improved
Pattern
Reduced
Prices**

Absolutely no leakage. No soiled labels. Desirable for granulated honey. No more rubber bands to taint the contents. Seals air-tight and prevents granulation. Handsome enough to be placed on the tea-table. A jar with no shoulders, making it easy to remove the contents. Each lid contains a wax-paper wad, and nothing could be more sanitary. The smaller jar will contain 5 ounces of honey, the middle-size 11 ounces; and the larger an exact pound. After years of experience in putting up honey for the fancy grocery trade, I have never found a jar that gives such universal satisfaction. All jars packed in corrugated shipping-boxes, which we find better and cheaper than wooden boxes. After filling with honey they can be re-shipped in same case, and the lightness of package saves freight. Breakage in transit out of the ordinary.

PRICES

Small, per gross, in corrugated cases.	\$3.20
Medium, per gross, in corrugated cases.	4.80
Large, per gross, in corrugated cases.	6.00

A descriptive illustrated catalog of a full line of bee-supplies will be mailed to any one interested.

WALTER S. POWDER, 859 Massachusetts Avenue, INDIANAPOLIS, IND.

The season for honey is drawing to a close and you will now be in need of **SHIPPING - CASES**

We carry them in stock at Syracuse, N. Y., and can make prompt shipment, having just purchased a motor truck for delivering goods to the railroads. We have heretofore depended on a truckman, who did not always happen to be on hand.

THE A. I. ROOT COMPANY,

SEVEN PER CENT DISCOUNT FOR SEPTEMBER CASH ORDERS

To those who buy now for next season, sending remittance with the order during the month of September subject to the conditions named below, we allow 7 per cent discount.

This discount will apply on all articles listed in our regular catalog at current corrected prices to date except as follows:

Tinned wire, paint, Bingham smokers, Porter bee-escapes, glass and tin honey-packages, scales, bees and queens, bee-books, papers, labels, printed matter, bushel boxes, seeds, and specialties not listed in our general catalog. Where any or all of these articles in a general order do not exceed fifteen per cent of the whole order, the discount may be deducted from the whole order, including these items which are otherwise excepted.

READ THE CATALOG!

Has it ever occurred to you how valuable a source of information, alike for the prospective beekeeper, the beginner, and the veteran, a modern bee-supply catalog is? A careful perusal of one of these catalogs is an education in itself.

The 1912 PEIRCE catalog is one of the most complete ever issued. While every thing is listed that the experienced beekeeper would require, special information is given for the beginner as to outfits required, and numerous questions are answered for his benefit. Illustrations of the various fixtures and appliances employed in bee culture add greatly to the interest and value of the publication.

If you have ever thought that you would like to keep bees, you should certainly secure the PEIRCE ILLUSTRATED BEE CATALOG and other literature that will be sent you on request. Our correspondence bureau is also at your service, and all questions will be answered promptly and fully.

The professional apiarist, too, will find a careful examination of this catalog profitable, since it covers the whole field of his requirements, the latest improvements and inventions included. Hundreds of Central States beekeepers, and others more distantly located, are experiencing perfect satisfaction in "PEIRCE SERVICE—ROOT QUALITY," as defined in this catalog. It costs you a postal card request—that's all.

A word to those who have the catalog: Let us ship that rush order now.

7 per cent discount on cash orders during September.

EDMUND W. PEIRCE

THE A. I. ROOT CO., MEDINA, O.

We Buy Honey

If you have a large crop with no local market for the same, let us handle it for you. We buy in any quantity, large or small, and can assure you of satisfactory treatment. Send a good sample, and be sure that you tell us just how your honey is put up, and how much you have. Do not ship any honey to us without instructions, but wait until you have heard from your sample. We will offer a definite price, and give you shipping instructions.

Cans

We still have a good stock of cans, and can make instant shipment of anything in this line. Good cans and shipping cases are an absolute necessity if you would get the best prices for your honey. Even the best honey put up in poor containers will be graded as second class, and honey that in itself isn't the very best will often bring a very fair price if attractively put up.

Write us for information or advice on any beekeeping subject, and your letters will have careful attention.

A full line of Root's supplies always on hand.

PUBLICATIONS ON

BEE CULTURE

Please use coupon below, checking the numbers of items wanted.

The pamphlets and booklets listed below are of more than ordinary interest:

- 1 **My First Season's Experience with the Honey-bee.** By the "Spectator," of the *Outlook*, of New York. A ten-page leaflet detailing the experiences of this well-known writer. You will read the leaflet through before you lay it down. Free.
- 2 **The Bee-keeper and Fruit-grower.** A 15-page booklet giving actual facts regarding the value of bees to fruit, and showing how bee-keeping may be doubly profitable to the fruit-grower. Fruit-growers are realizing as never before the necessity of having honey-bees in close proximity to their blossoming fruit. Free.
- 3 **Bee-keeping for Sedentary Folk.** A 24-page leaflet reciting the actual experiences of an amateur bee-keeper, showing what equipment is best, points derived, etc. Free.
- 4 **Catalog of Bee-keepers' Supplies.** Our complete catalog will be mailed free to any address on request.
- 8 **Habits of the Honey-bee.** By Dr. E. F. Phillips. A somewhat scientific handling of the habits and anatomy of the bee. Price 10 cts.
- 9 **How to Keep Bees.** A book of 228 pages detailing in a most interesting manner the experience of a beginner in such a way as to help other beginners. Price \$1.00 postpaid.
- 10 **The A B C of Bee Culture.** A complete encyclopedia of bees, of 576 pages, fully illustrated, \$1.50 postpaid; half leather, \$2.
- 11 **Cleanings in Bee Culture.** A 64-page illustrated semi-monthly magazine, the leading exponent of bee culture in this country. Ten cents per issue, but to new subscribers we will furnish it six months for 25 cts.
- 12 **Back-yard Bee-keeping.** Six interesting lessons written in readable newspaper style. Many facts to encourage the "City Bound" man or woman with the back-to-the-land longing. Free.
- 15 **Truth About Sweet Clover.** Interesting booklet of nearly 100 pages. Tells of value of sweet clover for honey, for plowing under, as fertilizers of the soil, and food for horses, cattle, swine, sheep, etc. Free.

The coupon below may be used as an order sheet by properly checking the numbers of items wanted and adding your signature, and remittance, if required.

Root's Section-Honey Boxes!

THERE have been very few years when the outlook for a bumper honey crop has been brighter than it is now—at the opening of the season of 1912. Every indication points to an almost unprecedented honey-flow, and the bee-keeper who is not making most complete preparations to reap the harvest will not be very well satisfied with himself when the surplus has all been taken off this fall, or when he knows a big flow is on and he has no sections to put on his hives.

Of course the section problem is the most important one to the comb-honey man, and it **MUST** be solved right. Therefore why take risks? Why run the slightest chance of getting sections of uncertain quality, or experimenting at a price you can not afford to pay? We are the largest manufacturers of Section-honey Boxes in the world—naturally we have the finest equipment for section-making, and cut up the best lumber. We are in close touch with every phase of bee-keeping—with every department of the honey trade—therefore we know the service sections are required to give, and we make **ROOT'S SECTION-HONEY BOXES** to meet these requirements. Years of experience and satisfied section patrons throughout the world ought to count; and you, Mr. BEEKEEPER, if you will buy **ROOT'S SECTIONS**, will understand why.

PRICE LIST OF SECTIONS

4¼x4¼ Beeway Sections—2 inch, 1½, 1¼, 1¼, or 7 to foot wide.

We send 1¼ style 2 beeway when your order does not specify style or width wanted.

The books listed below ought to be of interest to every one who has a small patch of ground to cultivate or a wish to develop something in this line. These books are all in stock, and orders can go out by first mail.

The A B C of Potato Culture

BY T. B. TERRY AND A. I. ROOT.

Mr. A. I. Root devoted a large part of his time during the summer of 1911 to revising the Potato Book which he wrote in collaboration with Mr. Terry 25 years ago. During the winter the 8th edition of 10,000 copies has been printed. Speaking of this valuable book, and of Mr. Terry, Mr. Root recently had to say:—"It will pay almost every man, woman, and child to read Terry's potato-book, no matter whether you ever did or ever will grow any potatoes or not. If you have read Terry's recent book, 'How to Keep Well and Live Long,' you will know that he is a student of nature, and a deliverer after God's gifts and God's secrets; and this potato-book, on every page, shows his remarkable gift. He is a philosopher of modern date; and his love for God's gifts, as well as his love for his fellow-men, shines out on every page. His studies of potatoes, it occurs to me, paved the way in his explorations in his later work in regard to how we should live, and keep our health." Contains nearly 400 pages, well illustrated, paper bound, 57c each postpaid. Cloth bound, 85c each, postpaid. (Deduct 7c if ordered sent with freight or express shipment.

How to Keep Well and Live Long

BY T. B. TERRY.

I am still gaining. That is what T. B. Terry says to-day, when he is 67 years old, after being so broken in health at 40 years of age that all the doctors who saw him and tried to help him gave him up to die. But Mr. Terry got well by working out his own cure. He tells all about it in his great health book, *How to Keep Well and Live Long*.

There is no other book like it in the world. You don't need to know medical words or medicines to understand it. It is written clearly and simply and has back of it the personal experience which tried and proved every step of the way to a long and healthy life. You can follow the same way. The book is only one year old, but over 5150 copies of it to date are making men and women healthier and happier because they have read and followed the teachings of its pages.

Nearly a thousand copies of this helpful book have been distributed through the publishers of "GLEANINGS IN BEE CULTURE," and not a single reader has expressed regret at his bargain. Mr. A. I. Root heartily endorses Mr. Terry's writings on health subjects. Contains 220 pages, substantially bound in cloth; \$1.00 per copy postpaid.

The Dollar Hen

"Every few days the friends write me, asking what poultry-book they had better purchase—which one I would recommend above all others, etc. Well, to get right down to it there is no *best* poultry-book. There are many good ones, but no one book contains *all* that is good. The one that is most emphatic against humbugs and frauds, especially costly medicines for dosing chickens, etc., is the one I have frequently referred to, "The Dollar Hen," by Milo M. Hastings.

The Dollar Hen is a real book, substantially bound—not a paper-bound pamphlet of "System," "Secrets," or "Methods," but a book worth several dollars of any poultryman's money. "The Dollar Hen" is a vast fund of valuable information that required much time, expense, and effort. Contains more than 200 pages; price postpaid \$1.00 per copy.

A B C of Strawberry Culture

Fully illustrated, 235 pages: Price 45c; by mail, 5c extra; cloth, 68c; by mail, 75c. New edition, revised and enlarged. This is also one of Terry's and has received some very high words of praise. Who that keeps honeybees does not also have a little garden patch? If you would learn to raise in it that most luscious of all fruits, the strawberry, with the best results, you can not be without this little book. Even if you don't grow strawberries you will be the better for reading it.

Tomato Culture

In three parts. By J. W. Day, D. Cummins, and A. I. Root; a most valuable treatise, embracing field culture, forcing under glass, and raising plants for market. Valuable to anyone raising garden stuff of any kind aside from tomatoes. 150 pages illustrated. Price 35c; by mail 40c.

Tile Drainage

By W. I. Chamberlain. This is a valuable companion to our other rural books. It embraces the experience of 40 years of one of our foremost practical agriculturists, who has laid with his own hands over 15 miles of tile. Price 35c; mail, 40c.

Our Farming

By T. B. Terry. In which he tells "how we have made a run-down farm bring both profit and pleasure." This is a large book, 6x9 inches, 367 pages, quite fully illustrated. It is Terry's first large book; and while it touches on the topics treated in his smaller handbooks, it is sufficiently different so that no one will complain of repetition, even if he has read all of Terry's little books. We are so sure it will be worth many times its cost that we are not afraid to offer to take it back if any one feels he has not got his money's worth after he has read it. Price 75c; postage 10c. Same in paper covers, postpaid, 50c; by express or freight with other goods, 10c less.

What to Do, and How to be Happy while Doing It

The above book, by A. J. Root, is a compilation of papers published in *GLEANINGS IN BEE CULTURE*, in 1886, 1887, and 1888. The suggestions are principally about finding employment about your own homes. The book is mainly upon market-gardening, fruit culture, poultry-raising, etc. Price in paper covers, 50c; cloth, 75c. If ordered by freight or express, deduct 8 and 10c respectively.

Celery for Profit

The first really full and complete book on celery culture, at a moderate price, that we have had. It is full of pictures, and the whole thing is made so plain that a schoolboy ought to be able to grow paying crops at once without any assistance except from the book. 90 pages, paper bound. 27 cts. per copy postpaid.

Maple Sugar and the Sugar Bush

BY A. J. COOK.

Author of the *Beekeeper's Guide*. This practical book, written several years ago, remains the most popular treatise on procedure in the sugar-bush. Contains 40 pages size of this one—paper bound and illustrated. Price per copy, 28c postpaid.

A B C of Carp Culture

This is a work of 70 pages 7x10 written by Geo. Finley and A. I. Root, and the best authority on the subject of carp culture yet in print. The rearing of carp is a pleasant and profitable amusement. This book will tell you all about it. In paper covers. Price 25 cts.; by mail 5 cts. extra.

Winter Care of Horses and Cattle

This is T. B. Terry's second book in regard to farm matters; but it is so intimately connected with his potato book that it reads almost like a sequel to it. If you have only one horse or cow it will surely pay you to invest in this book. Forty-four pages; four illustrations. Price 25 cts.; by mail, 30 cts.

The A. I. Root Co., Medina, Ohio.

THE
Coward
Good Sense
Shoe

The broad toe, snugly fitting heel-seat and graduated waist provide needed protection for the growing foot, support ankle and arch, and prevent "flat-foot."

Coward Arch Support Shoe and Coward Extension Heel made by James S. Coward for over 30 years.

HOW TO GET BETTER LIGHT

From KEROSENE (Coal Oil)

Tests by Prof. Rogers, Lewis Institute, Chicago, on leading oil-burning lamps show the Aladdin Mantle Lamp is the most economical and gives over twice as much light as the Rayo and other lamps tested. It is odorless, safe, clean, noiseless. Guaranteed. Better light than gas or electric. To introduce the Aladdin we'll send a sample lamp only.

AGENTS WANTED

Experience unnecessary. Every home needs this lamp. One agent sold over 1000 on money back guarantee, not one returned. Another sold \$800 worth in 15 days. Evenings made profitable. Ask for agents prices and trial offer.

10 Days TRIAL

WANTLE LAMP COMPANY, 360 Aladdin Building, CHICAGO, ILL.

Use KEROSENE Engine Free!

Amazing "DETROIT" Kerosene Engine shipped on 15 days' FREE Trial, proves kerosene cheapest, safest, most powerful fuel. If satisfied, pay lowest price ever given on reliable farm engine; if not, pay nothing. No waste, no evaporation, no explosion from coal oil.

Gasoline GOING UP!

Gasoline is 9c to 15c higher than coal oil, and still going up. Two pints of coal oil do work of three pints gasoline.

AMAZING "DETROIT"

—only engine running on coal oil successfully: uses alcohol, gasoline and benzine, too. Starts without cranking. Only three moving parts —no cams—no sprockets—no gears —no valves—the utmost in simplicity, power and strength. Mounted on skids. All sizes, 2 to 20 h. p. in stock ready to ship. Engine tested before crating. Comes all ready to run. Pumps, saws, threshes, churns, separates milk, grinds feed, shells corn, runs home electric lighting plant. Prices (striped), \$29.50 up. Sent any place on 15 days' Free Trial. Don't buy an engine till you investigate money-saving, power-saving "DETROIT." Thousands in use. Costs only postal to find out. If you are first in your neighborhood to write, you get Special Extra-Low introductory price. Write (138)

Cylinders cannot carbonize

Detroit Engine Works, 373 Bellevue Ave., Detroit, Mich.

THE "BEST" LIGHT

One burner will give as much light as ten ordinary oil lamps; six 16 candle power electric bulbs; six 16 candle power gas jets or 5 acetylene gas jets. Costs 2 cts. per week. Produces a pure, white, steady, safe light. Over 200 styles. Every lamp warranted. Agents wanted. Write for catalog.

"MONEY-MAKING SECRETS"

POULTRY SECRETS: First published in 1908, this collection of the carefully-guarded secrets of famous poultrymen created a sensation in poultry circles. Every secret is valuable and every one has passed severe tests of its usefulness. 64 pages, illustrated. 15th Edition, 110th thousand.

HORSE SECRETS: Compiled and written by DR. A. S. ALEXANDER, of Wisconsin, the eminent veterinarian. Exposes the swindling methods of "gyps" and crooked dealers. Also many feeding and fattening secrets. Invaluable to horse buyers and owners. 64 pages, illustrated. 9th Edition, 85th thousand.

THE MILLION EGG FARM: Describing the enormous business and plant of J. M. Foster's Rancocas Farm, where 18,000 laying hens produced last year the amazing total of 1,121,478 eggs. Written specially for beginners. 80 pages, profusely illustrated. 4th Edition, 35th thousand.

THE CURTISS POULTRY BOOK: The story of the Curtiss brothers and their great Niagara Farm, built up from nothing to an annual business approximating \$100,000 per year. Ducks, eggs, broilers, and cut clover are their staples. A remarkable story. 56 pages, illustrated. 3rd Edition, 30th thousand.

DRESSMAKING SELF-TAUGHT: For girls and women who wish to learn dressmaking quickly and thoroughly, either for making their own clothes or as a business. Twenty lessons by an expert. Clear, comprehensive, practical, new. 64 pages with diagrams.

DUCK DOLLARS: There is money in ducks. The Weber brothers market about 40,000 ducklings each year, and make a clear net profit of 50 cents on each one. This new booklet tells exactly how, with valuable advice for beginners as to operation and markets. 88 pages, illustrated.

FALL-BEARING STRAWBERRY SECRETS: The first complete hand-book covering the culture of this wonderful new fruit. Any one who can raise June strawberries can raise the Fall-bearers, but culture is different. Those who started first are reaping the high market profits. 64 pages, illustrated.

TURKEY SECRETS: The way to make turkeys a profitable farm crop, as demonstrated by HORACE VOSK of Rhode Island, the veteran turkey raiser who supplies the turkey for the President's Thanksgiving dinner each year. Instructive and enlightening. 64 pages, freely illustrated.

GARDEN GOLD: A new booklet written for people with small gardens, showing how to raise your own vegetables in these days of high prices, and SAVE money. And how to MAKE money by selling your surplus. Splendid for people with back yards only. 64 pages, illustrated.

SHALL I FARM? For city people trying to decide whether or not to go to the country. No golden promises, but a clear, impartial, unbiased, unprejudiced weighing of the subject. All the advantages and disadvantages of all kinds of farming plainly set forth. Nothing like it ever before printed. 64 pages.

So popular are these booklets, and so valuable their contents, that nearly

400,000 COPIES HAVE BEEN SOLD

during the last three years. Each is the very latest word in its own particular field—together they cover new discoveries, secret methods, exposures, new systems, little known information, and astonishing achievements in many lines.

We Offer { Any one of these booklets, postpaid (Your Choice), "GLEANINGS," 1 year, } All three for **\$1.00**
FARM JOURNAL, till December, 1915 }

\$1.50 to subscribers in Canada, Philadelphia, and foreign countries, on account of extra postage. Extra booklets, 20c. each. Booklet and papers may go to different addresses if necessary, but these

BOOKLETS CANNOT BE OBTAINED SEPARATELY—ONLY IN THIS COMBINATION.

THIS PAPER is well known to you, and requires no description or praise here.

The FARM JOURNAL is the standard farm and home paper—foremost in the world. It has more than 750,000 subscribers. It is up-to-date, clean, boiled-down, honest. It knows what to say, and can stop when it has said it. It is for the poultryman, gardener, horse owner, dairyman, grain grower, fruitman, the farmer, the villager, the suburbanite, the man who lives in the country, and those who would like to, the women folks, the boys and girls. In short, it is for YOU. Cheerful, entertaining, intensely practical, absolutely clean. When the time is up it will stop.

No more queens this season, after Sept. 15th. A. J. SEAVEY, Rt. 2, Farmington, Maine.

WANTED.—To buy bees in Southern California. BEEKEEPER, Lock Box 16, Surrey, Cal. 39935.

FOR SALE.—250 colonies of bees. No disease. Act quickly. C. R. PARKS, Plateau City, Col.

WANTED.—200 colonies of bees in good shape. State particulars and price in first letter. Cash deal. HOUSE & DICKINSON, Corinne, Utah.

FOR SALE.—Untested Italian queens. Safe arrival and pure mating guaranteed. Untested, 75 cts.; doz., \$7.00. E. A. SIMMONS, Greenville, Ala.

Golden Italian queens, nuclei, and full colonies. See price list, Gleanings, May 15, page 8. ISAAC F. TILLINGHAST, Factoryville, Pa.

FOR SALE.—50 to 200 colonies, eight-frame, good condition, Sept. 15. E. F. ATWATER Co., Meridian, Fla.

FOR SALE.—Untested golden Italian queens, 50 cts. each; four hybrid Italian queens, \$1.00. J. F. MICHAEL, Winchester, Ind.

FINE ITALIAN QUEENS.—Prolific, hardy, gentle. Root strain. Untested 75 cts. each; 6 for \$4.25. J. F. ARCHDEKIN, Rt. 7, St. Joseph, Mo.

FOR SALE.—Three-banded Italian queens bred for honey, gentleness, and prolificness. One, \$1.00; 6 for \$5.00. WM. S. BARNETT, Barnett's, Va.

FOR SALE.—Golden untested queens, 75 cts. each, or \$7.25 for dozen; safe arrival guaranteed. D. F. TALLEY, Rt. 4, Greenville, Ala.

FOR SALE.—Golden Italian queens. Tested, \$1.00; select tested, \$1.25; untested, 60 cts.; dozen, \$7.00. D. T. GASTER, Rt. 2, Randleman, N. C.

FOR SALE.—Fine goldens, hustlers; rest of the season, 60 cts. each; 6, \$3.50. EDWARD A. REDDOUT, Lysander, N. Y.

Hardy northern-grown queens of Moore's strain of Italians, ready for prompt shipment. Untested, \$1.00, 6 for \$5.00; 12 for \$9.00. Write for lots of 50 or more. P. B. RAMER, Harmony, Minn.

Three-banded Italian queens. Best honey-gatherers. Untested, 50 cts. each. Can fill orders promptly. No disease. W. D. ACHORD, Fitzpatrick, Ala.

FOR SALE.—Yard of 300 colonies in single-wall hives in St. Lawrence Co.; also 90 colonies in Dugdale chaff hives in Saratoga Co. No disease. A square deal or no trade. F. W. LESSER, East Syracuse, N. Y.

FOR SALE.—Howe-Root strain, select tested Italian queens, \$1.25; breeders, \$3.00. Bargain in black and buff Orpingtons, R. C. Reds, blue-ribbon winners at Rochester and Watertown. THE CLOVERDALE BEE AND POULTRY RANCH, Evans Mills, N. Y.

FOR SALE.—Italian queens, untested, 75c.; tested, \$1.00. Bees by the pound, nucleus, or full colonies. Red-clover bees.

EUGENE S. WATSON, Rt. 2, Madison, Me.

Colonies of Italian bees in L. hives, 10-fr., built on full brood-frames, wired, body and shallow super, redwood, dovetailed, three coats white sheeted lids; each neat, modern, and full of stores—any time. JOS. WALRATH, Antioch, Cal.

Fine select 3 and 5 banded queens, only 75 cts. by return mail; also 225 stands of Italian bees in ten-frame D. hives at a bargain; only \$3.90 per stand if taken on stand. J. L. FAJEN, Stover, Mo.

Golden Italian queens that produce golden bees, the brightest kind. Gentle, and as good honey-gatherers as can be found. Each, \$1.00; six, \$5.00; tested, \$2.00; breeders, \$5.00 to \$10.00. J. B. BROCKWELL, Barnetts, Va.

Golden and three-banded Italian queens. Tested, \$1.00 each; 3 for \$2.75; 6 or more, 85 cts. each. Untested, one, 75 cts.; 3, \$2.00; 6 or more, 65 cts. each. There is no disease here. Bees, per lb., \$1.00; nuclei, per frame, \$1.25. C. B. BANKSTON, Buffalo, Leon Co., Texas.

FOR SALE.—800 colonies of Italian bees, more or less, situated in five yards; all in good condition, on this beautiful island of Jamaica, a land of perpetual sunshine; flowers nearly the whole year round; good investment for a practical up-to-date beekeeper to take hold of now. Write for further particulars to DAVID MARCHALLECK, Morant Bay, Jamaica.

FOR SALE.—Italian queens, bred from the best honey-gathering strains obtainable. Untested, 75 cts.; select, \$1.00; tested, \$1.25; select tested, \$1.50. Nuclei without queen, one frame, \$1.50; two frame, \$2.00; three-frame, \$2.75. For queens and nuclei in quantity lots, and bees by the pound, write for prices and circulars. Virgin queens from my best breeders, 40 cts. each; three for \$1.00. ROBT. B. SPICER, Wharton, N. J.

FOR SALE.—Fine young queens by return mail. Root-Moore strain, select tested, \$1.25; select untested, 90 cts.; dozen, \$9.00; best breeders, \$4.00; hybrid queens, 40 cts. each; dozen, \$4.00. No disease; perfect satisfaction guaranteed; also colonies in L. hives at a reasonable price. WILMER CLARKE, Box 371, Earlville, Mad. Co., N. Y.

Because of ideal weather and continuous honey flow at this date my nuclei are full, cells hatching and still grafting. Now is your chance to requeen your entire apiary with hardy, prolific stock—Doolittle-Moore strain. Untested queens, 60 cts. each; 12 for \$6.50; 25 for \$12.50; tested, \$10 for 12. Satisfaction or money back. J. B. HOLLOPETER, Pentz, Pa.

FOR SALE.—Three apiaries, about 240 colonies Italians and hybrids, run for extracted; three honey-houses, three four-frame extractors, etc.; 10-frame Langstroth hives, well built and tarred and painted; plenty of supers and spare stores. Average crop for four years; 80 lbs. per hive; reason for selling, occupation necessitates owner living in another district, and crop decreasing under hired help. No diseases and no wintering in St. Lucia. \$2400. J. WARD DENNERY, Valle Apiaries, St. Lucia, B. W. I.

FOR SALE.—My apiary of 60 stands of bees, 8-frame hives, 80 half-depth supers on with honey-crop of this season, half for extracting, half comb honey, to go with the bees. Also 25 1½-story hives for comb honey, no bees in them; 8 frames complete set up, painted, but never used; also one dozen older hives, no bees in them, 8 frames, but still in good condition; one Cowan two-frame extractor, and other things belonging to the business. Will take 200 dollars for all, taken on the stand. Reason for selling, failure of health, old age, and no help. Bees can be left until winter. JACOB RUCH, Gruetli, Grundy Co., Tenn.

FOR SALE.—North Carolina bred Italian queens, bred up for business; none better for honey-gathering; good recommendations coming in almost every day. I have Root's and Moore's strain, Davis', Quirin's, Laws', and choice imported breeders, to get my fine honey-gathering strain from. I breed all queens in full two-story colonies running over with bees at all times. I don't keep any thing but the red clover and the Goldens in my yards. Try them and see for yourself. Untested, 75 cts.; doz., \$7.00; tested, \$1.25; select tested, \$1.50. Extra select tested, \$2.00. Select breeders, \$3.00. Extra select, \$5.00.

H. B. MURRAY, Liberty, N. C.

WANTS AND EXCHANGES

WANTED.—To exchange Root bee supplies, either for money or honey. Catalog.

E. W. PEIRCE, Zanesville, Ohio.

WANTED.—Partner. Will sell half interest in \$1500 worth of bees and supplies. All combs on full sheets of foundation. No disease. Have always returned good income. Desire to move to new land in Wisconsin. Splendid opportunity for man of good clean character.

GLEANINGS IN BEE CULTURE. 60362.

HELP WANTED

WANTED.—At once, one or two more helpers for the rest of the season.

F. B. CAVANAGH, Hebron, Ind.

WANTED.—Four or five helpers to assist me in a large house-to-house honey-selling business. A rare chance to learn a business that will pay a fancy income.

JOHN C. BULL, Rt. 8, Valparaiso, Ind.

MISCELLANEOUS

FOR SALE.—New \$25.00 camera and outfit for \$15.00, postal size.

OTTO HUND, Rt. 1, Box 58, Marine City, Mich.

PIGEONS! PIGEONS! Thousands, all breeds; many satisfied customers everywhere; start with our money-making pigeons. Large free illustrated matter.

PROV. SQUAB CO., Providence, R. I.

REAL ESTATE

WANTED.—To exchange 190 acres and 30-room hotel for bees and supplies of honey.

ERNEST W. FOX, Clint, Texas.

FOR SALE.—A clean established apiary, located near river and railroad depot in this city. A bargain.

H. C. ADLER, Victoria, Texas.

\$5000 buys my fine quarter section located in the great grain district of Saskatchewan, Can.

D. E. LHOMMEDIEU, Colo, Iowa.

FOR SALE.—Farm of 90 acres in Ulster Co., New York. Well suited for bees, poultry, fruit, and dairy; $\frac{1}{4}$ mile from creamery and depot. Particulars gladly given. Price \$4000—\$2500 cash.

STEPHEN R. CHRISTOPHER,
West New Brighton, N. Y.

FOR SALE.—My residence property in the village of Hart, consisting of 8 acres, good buildings, a few steps from postoffice and courthouse; one of the finest school buildings in Northern Michigan, in the great fruit belt; also my apiary, consisting of 35 colonies in good shape; 8-frame hives; L. frames, with all surplus arrangements for both comb and extracted; in fact, have the business complete. Reason for selling, old age; have kept bees 50 years, 46 years right here. Will sell bees alone if wanted. W. D. MARKHAM, Hart, Mich.

FOR SALE.—27 acres, some very good land, about 3 or 4 acres timber. Good bee location for queen rearing and honey; 50 colonies Italians, house, 3 rooms, 3 new porches just finished. Barn room for one horse and cow; good smokehouse; fine fish pond stocked with good fish under same fence as apiary. Black locust, poplar, and basswood, are my main honey source. Good well drilled at kitchen door. Several other things such as farming tools, all for \$2500 if taken before Nov. 1st, 1912.

CURD WALKER, Queen-breeder,
Rt. 1, Box 18, Jellico, Tenn.

FOR SALE.—Apiary of 105 colonies of bees, with or without location, $\frac{1}{4}$ of an acre of ground in the edge of village, and planted to all kinds of fruit; about 40 trees are now bearing. Beeyard is enclosed with six-foot tight fence, which is lined inside with grapevines, currants, gooseberries, and blackberries. Frame shop and honey-house 1 $\frac{1}{2}$ story; 65-barrel cistern; corn-crib; chicken and hog yards; every thing one needs but dwelling house. This would be a fine location for a queen-breeder—not over a dozen colonies of bees within 1 $\frac{1}{2}$ miles of the yard. No disease, and have never had any. The bees are all in good shape; hives as good as new; combs built on Hoffman frames; wired foundation, except possibly 100 frames. I spent \$500 in fitting up my yard, not counting my labor. Land sells here from \$200 to \$400 per acre. I am nine miles below Zanesville, on the Muskingum River, overflowing creek and river bottoms west, south, and east of me. The location is No. 1; I have had but one failure in 21 years that I have kept bees; good market for honey near. My crop is sold, and not all off yet, at \$3.75 per case. Any one buying the property will get good hive-stands, what winter cases I have, shade-boards, cushions, etc. I will take \$1000 for ground and bees, and a low price for extras, or will sell the bees, to be moved, for \$500. J. F. TRUESDELL, Duncan's Falls, O.

INDIAN RUNNER DUCKS

White Indian Runner duck eggs. High fertility guaranteed. Running water.

OTTO WESTFELT, Halcyon, Cal.

Fawn and White Indian Runner duck eggs, \$1.00 per 11; \$1.00 per 100. Day-old ducklings, 25 cts. each. Mailing-list free.

KENT JENNINGS, Mt. Gilead, O.

INDIAN RUNNER DUCKS, American Standard light fawn, and white. I have a fine lot of one-year-old breeders for sale at a real bargain price. I can start you, and start you with the best. Write me.

C. O. YOST, Rt. 4, Box D, Winchester, Ind.

BEEKEEPERS DIRECTORY

QUEENS.—Improved red-clover Italians, bred for business; June 1 to Nov. 15, untested queens, 75 cts.; select, \$1.00; tested, \$1.25 each. Safe arrival and satisfaction guaranteed.

H. C. CLEMONS, Boyd, Ky.

Quirin's famous improved Italian queens, nuclei, colonies, and bees by the pound, ready in May. Our stock is Northern-bred and hardy; five yards wintered on summer stands in 1908 and 1909 without a single loss. For prices, send for circular.

QUIRIN-THE QUEEN-BREEDER, Bellevue, O.

Queens reared scientifically from breeders perfected by years of elimination of all undesirable traits, are far better and more prolific than the ones hatched from a natural swarm or supersedure cells. We have the famous Moore strain of Italians, and are giving every care to the perfection of cells and mating. We have never had any disease in or near our apiary. If you are interested, write us for booklets describing our method. Untested queens, 75 cts.; dozen, \$8.00.

DRS. WALLIN & CORLIS, Brooksville, Ky.

Honey Reports continued from page 2.

BUFFALO.—The demand for honey is still very slow here. Receipts are light, and still there is plenty for the demand. We quote No. 1 to fancy white-clover comb at 16 to 17, and in good-sized lots this would be shaded from one to two cents to effect sales.

Buffalo, N. Y., Sept. 7. W. C. TOWNSEND.

ZANESVILLE.—Honey is moving a little more briskly. The jobbing trade is still understocked, and now is a favorable time for producers to sell their crop; 15 to 16 cents is being offered producers for No. 1 and fancy white-clover comb, and 8 to 8½ for best white extracted. Prices to the trade grade from 19 down, on comb, according to quality and quantity. Producers are offered 28 cents cash, 30 in trade, for beeswax of good quality.

Zanesville, O., Sept. 5. E. W. PEIRCE.

NEW YORK.—There is a good demand for new comb honey, and shipments are now arriving more freely and in larger quantities. We quote fancy white, 15; and in some cases it will bring 16; No. 1 white, 14; No. 2 white, 13. No buckwheat is on the market as yet, but we should think it would sell on arrival at about 10 to 11. There is no change in the market as to extracted, prices remaining the same as in our last quotation, with sufficient supplies. Beeswax is steady at 30.

New York, Sept. 5. HILDRETH & SEGELEN.

LIVERPOOL.—Since we last reported to you our honey market has continued quiet; 25 barrels Chilian have been sold at \$6.84 for pile 2, and 20 casks unstrained Jamaica at \$6.00; \$5.76 has been refused for 53 barrels Peruvian (manufacturing quality); sellers ask \$6.00. We are sorry the demand for white and fine sorts is so poor; but sellers of Chilian, pile X and 1, are not getting on, and we think the demand is only a question of time. Some 50 cases Californian sold at \$11.16 for fine, \$9.60 to \$11.16 quoted. Jamaica honey is slow, and there are no sales of importance beyond that mentioned above. Other descriptions are quoted as follows: Haitien, \$5.76 to \$7.20; Peruvian, \$3.84 to \$4.80; Chilian, \$5.52 to \$8.16; Jamaican, \$6.24 to \$7.68; Californian, \$9.60 to \$10.92. Beeswax, market is steady. Arrivals of Chilian just in will test our market. Sales of Gambia at \$24.48, and Sierra Leone at \$33.54. Other descriptions are quoted as follows: African, \$32.16 to \$34.48; Jamaican, \$37.72; West Indies, \$32.64 to \$36.28.

Liverpool, Aug. 21.

TAYLOR & Co.

Convention Notices.

BEEKEEPERS OF OKLAHOMA, ATTENTION.

Please place the date of Tuesday evening, Oct. 1, in your minds in such a position that it will not be forgotten. At that time in the apiary building at the State fair grounds in Oklahoma City there will be a meeting that all should attend.

Some work looking to the interests of the industry has been done, but more is needed. We must have the support of those interested, to accomplish more. We have not been getting the support necessary. If you have not been seeing the display of Oklahoma honey shown at this fair you have no idea of its magnificence. It will likely be as good this year, or better, than ever before. It has been the practice of the fair management to throw the grounds open in the evening, and admission is free. I presume this will be done this year. Come and treat yourself to the sight of a fine honey display, and at the same time give encouragement to the industry in which you are interested. It is hoped to present a program of more than usual interest.

M. FRED GARDINER, President.

SPECIAL NOTICES

A. I. ROOT

THE CONVERGENT EGG-FARM, ETC.; SEE POULTRY DEPARTMENT IN THIS ISSUE.

On page 603 I mention the convergent dairy barn; but I did not say that I had submitted to the Cleveland architects my plan for a convergent egg-farm as given in our issue for July 1. Well, the letter below indicates what they think of it:

BRIGGS & NELSON, Architects,
669 Rose Building.

Cleveland, Sept. 6.

Mr. A. I. Root:—I beg to thank you for the two copies of your journal giving a description and cuts of the poultry-house and yards which you have worked out. The principle involved is identical with that being used in the dairy barn which we are planning. It is certainly interesting to feel that you have worked out a plan so similar to the circular-dairy-barn plan without having seen plans of the latter building.

Very respectfully yours,

HERBERT B. BRIGGS.

My opinion is that, a little later on, some of our many poultry journals may think best to "sit up and take notice" of the convergent egg-farm. See our Poultry Department for July 1.

SEED CORN FOR PLANTING NEXT YEAR; NOW IS THE TIME TO GATHER IT.

"Whatsoever a man soweth, that shall he also reap." If he plants poor seed corn he will have missing hills or worse than that. He may go through the motions necessary to raise a crop, and lose a great part of his labor as well as a part of his land by having missing hills. Our attention is called to this matter by two very valuable articles in the *Successful Farmer*, of Des Moines, Ia., for September. One of the articles is entitled "The Significance of the Missing Hills." The other is a "seed-corn symposium." And there is still another article entitled "Our Junior Farmers' Department." It tells the boys on the farm just how to go to work to pick out the seed corn and how to keep it so it will be sure to grow. *Successful Farming* is only 25 cents a year; but these articles I have mentioned are easily worth ten times that much.

Just now we have here a beautiful field of corn with great handsome ears bending over the stalks by their weight. We have for several years selected our seed corn in the fall, and dried and preserved it in a basement where there is steam heat. Well, for many years we have been in the habit of planting white beans in the missing hills, or where there was only one stalk in a hill. Last spring we did not plant any beans in that particular field because there were no missing hills, or almost none at all, and hardly any containing only one stalk. Another thing, when you find a farmer so careful and thorough in all his work that he picks out his ears to plant at just the proper time, and then tests every ear before planting in the spring, etc., you will find this farmer looks after his interests in a like manner all over his farm; and he is the farmer who has an automobile to get around and enjoy life in an up-to-date way. Are you one of that sort?

HONEY LABELS

There is nothing that adds more to the attractiveness of a honey package than a neat label carefully worded and of the proper style. The guarantee of purity by the producer put on every package he offers for sale is the best protection he can get from the stories of adulteration that injure the sale of his product.

For glass packages a small label is generally preferred, while for tin, one that laps around the package is considered best. We supply both gummed and ungummed labels. We recommend the ungummed, however, for they adhere more readily when pasted on a package, and are not affected by changes in the atmosphere as are the gummed.

We give on the opposite page a few illustrations of some of our stock patterns. These are printed, some of them in two or more colors, some in bronze on glazed paper, and some in black on glazed paper. To get a very adequate idea of these you ought to see samples printed on regular label stock in the proper colors. We have a catalog which shows just what we can furnish in this line, and we shall be glad to send it on request.

Just now we can give very prompt attention to orders for this label work. We can furnish special labels too if you tell us what you want. Of course the price is higher than for our regular patterns; but if you are buying them in very large quantities you may want something to suit your individual tastes. Let us do your label work for you, for we can guarantee satisfaction.

The A. I. Root Co., Medina, O.

No. 90.—Bronze on glazed paper, same price as No. 89.

No. 89.—Bronze on glazed paper, 250, \$1.00; 500, \$1.50; 1000, \$2.25; 2000, \$4.00.

Wording on all labels changed to suit. Labels trimmed to margin. Above prices are on ungummed stock.

No. 94.—Bronze on glazed paper, 250, 90c.; 500, \$1.50; 1000, \$2.00; 2000, \$3.50.

No. 91.—Bronze on glazed paper, 250, \$1.00; 500, \$1.50; 1000, \$2.25; 2000 \$4.00.

PROTECTION HIVE

The best and lowest-priced double-wall hive on the market. This hive has $\frac{3}{4}$ material in the outer wall, and is not cheaply constructed of $\frac{1}{2}$ material as are some other hives on the market. Packing or dead-air space as you prefer. Remember, winter is approaching. Get your bees into comfortable quarters before it is here. Send for a catalog.

A. G. WOODMAN CO., GRAND RAPIDS, MICH.

HONEY MARKETS

The prices listed below are intended to represent, as nearly as possible, the average market prices of which honey and beeswax are selling at the time of the report in the city mentioned. Unless otherwise stated, this is the price at which sales are being made by commission merchants or by producers direct to the retail merchants. When sales are made by commission merchants the usual commission (from five to ten per cent), cartage, and freight will be deducted; and in addition there is often a charge for storing in the commission merchant. When sales are made by the producer direct to the retailer, commission and storage and other charges are eliminated. Sales made to wholesale houses are usually about ten per cent less than those to retail merchants.

EASTERN GRADING RULES FOR COMB HONEY.

FANCY.—All sections well filled, combs straight, firmly attached to all four sides, the combs unsoiled by travel-stain or otherwise, all the cells sealed except an occasional one, the outside surface of the wood well scraped of propolis.

A No. 1.—All sections well filled except the row of cells next to the wood; combs straight; one-eighth part of the comb surface soiled, or the entire surface slightly soiled; the outside surface of the wood well scraped of propolis.

No. 1.—All sections well filled except the row of cells next to the wood; combs straight; one-eighth part of the comb surface soiled, or the entire surface slightly soiled.

No. 2.—Three-fourths of the total surface must be filled and sealed.

No. 3.—Must weigh at least half as much as a full-weight section.

In addition to this the honey is to be classified according to color, using the terms white, amber, and dark; that is, there will be "Fancy white," "No. 1 dark," etc.

NEW HONEY-GRADING RULES ADOPTED BY THE COLORADO STATE BEEKEEPERS' ASSOCIATION, DECEMBER 13, 1911.

FANCY WHITE.—Sections to be well filled, comb firmly attached on all sides and evenly capped, except the outside row next to the wood. Honey, combs, and cappings white, and not projecting beyond the wood. Wood to be well cleaned; no section in this grade to weigh less than 13½ ounces.

No. 1.—Sections to be well filled, combs firmly attached on all sides and evenly capped, except the outside row next to the wood. Honey white or very light amber; comb and cappings from white to slightly off color. Comb not projecting beyond the wood; wood to be well cleaned; no section in this grade to weigh less than 13½ ounces.

CHOICE.—Sections to be well filled; combs firmly attached; not projecting beyond the wood, and entirely capped, except the outside row next to the wood. Honey, comb, and cappings from white to amber, but not dark; wood to be well cleaned; no section in this grade to weigh less than 12 ounces.

No. 2.—This grade is composed of sections that are entirely capped, except row next to wood, weigh-

ing from ten to twelve ounces, also of such sections that weigh 12 ounces or more, and have not more than 50 uncapped cells all together, which must be filled. Combs and cappings from white to amber in color, but not dark; wood to be well cleaned.

EXTRACTED HONEY.—Must be thoroughly ripened; weigh 12 pounds per gallon. It must be well strained, and packed in new cans. It is classed as white, light amber, and amber.

STRAINED HONEY.—This is honey obtained from combs by all other means except the centrifugal extractors, and is classed as white, light amber, amber, and dark; it must be thoroughly ripened and well strained. It may be put up in cans that previously have contained honey.

BOSTON.—We quote fancy white comb at 16 to 17; No. 1 white comb, 15 to 16; fancy white extracted, 10 to 11; light amber, 9 to 10; amber, 8. Beeswax, 30.

Boston, Sept. 20.

BLAKE-LEE CO.

COLUMBUS.—We quote fancy white comb, 17; No. 1 white comb, 16½; No. 2 white comb, 15. The demand is good, and receipts light.

THE EVANS & TURNER CO.

Columbus, O., Sept. 19.

INDIANAPOLIS.—Extracted honey of finest quality in five-gallon cans is selling at 10½ to 12, according to quantity. No. 1 and fancy white comb sells for 16 to 17. Beeswax is in good demand, and producers are being paid 30 cts. per pound.

Indianapolis, Sept. 20.

WALTER S. POWDER.

KANSAS CITY.—Receipts of both comb and extracted honey are still light. The demand for comb is good. We quote No. 1 white comb, 24 sections, \$3.50; No. 2 white comb, ditto, \$3.25; No. 1 amber, ditto, \$3.25; No. 2 amber, ditto, \$3.00; extracted white, per lb., 8 to 8½; extracted amber, 6 to 8. Beeswax, 25 to 28.

C. C. CLEMONS PRODUCE CO.

Kansas City, Mo., Sept. 18.

ZANESVILLE.—Honey is moving a little more briskly. The jobbing trade is still understocked, and now is a favorable time for producers to sell their crop; 15 to 16 cents is being offered producers for No. 1 and fancy white-clover comb, and 8 to 8½ for best white extracted. Prices to the trade grade from 19 down, on comb, according to quality and quantity. Producers are offered 28 cents cash, 30 in trade, for beeswax of good quality.

Zanesville, O., Sept. 20.

E. W. PEIRCE.

SCHENECTADY.—The honey market is in good condition. Receipts are liberal, and demand good. The average quality is only fair, but good enough for a majority of the trade. We have not yet received any fancy white clover; some good buckwheat, but the latter is reported a short crop in this section. We quote fancy white clover, 16 to 18; No. 1, 14 to 15; No. 2, 12 to 13; mixed, 11 to 12; buckwheat, 11 to 13; extracted white, 8 to 9; dark, 7 to 8.

Schenectady, Sept. 17.

CHAS. MCCULLOCH.

SURE, OLD COMBS ARE VALUABLE

IF shipped to us for rendering. . . WE EXTRACT 99½ per cent OF WAX, and then pay you Highest Market Prices, or 2 cents additional in trade. . . . YOU CAN'T APPROACH THAT FOR PROFIT. . . We need great quantities of Comb and Extracted Honey. . Write us.

THE FRED W. MUTH CO.

"The Busy Bee Man"

51 Walnut Street

Cincinnati, Ohio

The Best Time to Buy Supplies

The season just past has demonstrated more clearly than ever the necessity for being prepared for a honey-flow **BEFORE** it comes. If you wait until the season is upon you, the chances are that the greater part of the crop will be lost while you are impatiently waiting for supplies to arrive. It may seem a little early now to think of next season's honey harvest; but the fact of the matter is, this is just the time to order goods for next season.

We are beginning now to replenish our stocks. We shall have carload orders coming from the factory very often for the next few weeks. Special orders placed now can have just the attention they need, both here and at the factory, and you may have your goods sent in one of our cars, thereby saving on transportation charges. Regular stock will come straight to you from our warehouse in new unbroken packages, and you can put the goods together in your odd minutes, thereby saving the expense of extra help in the spring.

Our usual discounts for early orders apply again this season—six per cent for cash orders sent in October, the discount diminishing one per cent per month as the season advances. These discounts mean a considerable saving, and you might as well take advantage of the highest by ordering now. No change of prices has as yet been announced, and you may, therefore, order from your present catalog. If your catalog has been mislaid, write us at once and we will send another.

If your season's crop of honey is not yet disposed of, we can give you a good price and handle it promptly. Send samples of extracted and full information as to containers, flavor, quantity, price, etc. We also handle comb honey.

Honey for Sale by the National Beekeepers' Ass'n

Beginning this month, we are arranging a card record of every member of our Association who has honey for sale. This record will tell the amount of honey he has, what kind, how put up, and the price f. o. b. his station. Buyers who are in need of honey, whether in ton or car lots, will do well to write us, stating their wants. We will then refer you direct to the beekeeper having what you want, and the deal will be made direct between you and him.

No Charge for This Information

Not one cent will be charged you for this. Our object is to widen the distribution of honey, bring buyer and producer closer together, place each particular kind of honey in the market that demands it, and thus assist the producer in getting a better price.

Other Benefits

We have furnished our members this year with standard tin packages for extracted honey. Hundreds of dollars' worth have been sold, and buyers are coming back for their second and third orders. This tells you the satisfaction they are giving. Are also handling glass packages.

The Beekeepers' Review

This is now the official organ of the Association. Send in \$1.00 now, and get the November and December numbers free. The dollar will apply on your 1913 subscription. When you get the Review, look up the list of branches and send 50 cts. to the nearest branch. This total of \$1.50 will entitle you to full National and branch benefits, together with a subscription to the Review to the end of 1913. We now have 23 National branches, in almost as many different States. Let us help YOU sell your honey.

Address The National Beekeepers' Association

E. B. Tyrrell, Sec., 230 Woodland Ave., DETROIT, MICH.

Honey Reports continued from page 2.

CINCINNATI.—The market on comb honey is quiet, and there is not very much demand. This we owe to the hot weather for this time of the year and the large fruit crop. For No. 1 white comb honey in a wholesale way we are getting 15½ cents. There is no demand for off-grade comb honey. The demand for extracted is fair, white selling at 9½ in 60-pound cans; light amber in 60-pound cans is selling at 8 cents. Beeswax, fair demand at \$33.00 per hundred. The above are our selling prices, not what we are paying.

Cincinnati, Sept. 17. C. H. W. WEBER & Co.

CHICAGO.—Comb honey is beginning to accumulate. The demand of late has not taken receipts upon arrival, yet the quality of the honey is so much superior to that of last season that we look for a much larger volume of business. Prices still range from 17 to 18 for the No. 1 to fancy. Other grades from 1 to 3 cts. per lb. less. Extracted honey is selling chiefly at 8 to 9 for the white grades, it now being difficult to obtain 10 cts. for the clover; but the fine lindens are still bringing that price. Beeswax remains unchanged at from 30 to 32, according to color and cleanliness.

Chicago, Sept. 17. R. A. BURNETT & Co.

NEW YORK.—Comb honey is now arriving right along, with a fair demand for all grades at unchanged prices. The season for buckwheat being late this year, there is none on the market yet to speak of. From the reports we are receiving from producers there will be a rather light crop; however, the demand for buckwheat comb honey being limited we do not think that higher prices will rule than from 10 to 12 cts., according to quality. Extracted is in fair demand for all grades at unchanged prices.

New York, Sept. 17. HILDRETH & SEGELKEN.

ST. LOUIS.—The receipts of comb honey are still small, and of irregular quality; but we understand that several carloads of comb honey are on the way from California and Colorado, and same are offered, to arrive, at \$3.75 to \$3.80 per case for the best grade; No. 2 honey sells at 25 to 50 cents per case less, cases weighing not less than 22 pounds net. Lighter weight honey generally sells by the pound at 15 to 16 cents for white, and 14 to 15 for light-amber color. Dark and inferior honey is not in demand, and is sold at considerably less. The demand keeps up on extracted honey, and is quotable at 7 cents for light amber, in barrels and half-barrels, and 7½ cents in five-gallon cans. There is no white clover or California amber honey offered on this market at present. Beeswax is in good demand at 29 cents for prime. Inferior and impure less.

R. HARTMANN PRODUCE Co.

St. Louis, Mo., Sept. 11.

Opening Accounts by Mail

To open an account and transact business with this bank without a personal visit to our banking rooms is a simple matter. Send your remittance in the shape of check, draft, money order, or currency in a registered letter. State the name in which you wish the account opened and we will send you a pass book by return mail.

We shall be pleased to give further particulars upon request.

A. T. SPITZER, Pres.

E. R. ROOT, Vice-pres.

E. B. SPITZER, Cashier

The Bank that Pays 4 per cent

ALBANY.—The honey market is quiet, there being only white grades on hand, and we have to ask more for them than buyers like to pay. There being no buckwheat honey, it would seem we should be able to get better price for the white grade; but as the two kinds go to different classes of trade, those who have a demand for buckwheat which we could use at 13 cts. can not pay 15 to 16 that we ought to get for the white grades. Extracted is quiet; principal demand is for white grade at 8 to 8½. Buckwheat, 7 to 7½. Beeswax, 30 to 32.

Albany, N. Y., Sept. 19.

LEARN BEEKEEPING from the Beginning

"First Lessons In Beekeeping" and the . . . **\$1.00**
American Bee Journal, one year, Both for Only

"First Lessons In Beekeeping" is a 190-page book telling all that the beginner need know. . . . It has an attractive paper cover, and many illustrations.

"Doolittle's Scientific Queen-rearing," and the **\$1.00**
American Bee Journal, one year, Both for Only

Doolittle's "Scientific Queen-rearing" book contains 126 pages, and is bound in leatherette with round corners. It tells in the clearest way possible just how the famous queen-breeder, Mr. G. M. Doolittle, rears the best of queen bees in perfect accord with Nature's way. As all know, Mr. Doolittle has spent some 40 years in rearing queens and producing honey. He has no superior as a queen-breeder. You can learn to rear fine queens by following his directions.

The beginner will want "First Lessons;" the older beekeeper should have "Scientific Queen-rearing." You will not regret it if you send your \$1.00 now and get either one of these books with the JOURNAL, as the JOURNAL itself is worth more than the total cost.

AMERICAN BEE JOURNAL, . . . HAMILTON, ILLINOIS

"If goods are wanted quick, send to Pouder."

Please Consider This

I have a business proposition to make you which will be mutual and profitable. If you will place your orders for Bee Supplies early I can save money for you; and what I can save in this way I am more than glad to turn over to you, because it gives us employment during the dull season and relieves us during the rush season, and there will be no complaints, no delays, and no disappointments, and you may as well save the money. In ordering Bee Supplies during October you may deduct six per cent. This discount will decline one per cent per month. You will readily understand the convenience of securing your supplies early, and then having the opportunity of assembling them at your convenience. To be available, the order must be accompanied with remittance. The goods offered are the Root quality, and I do not know of any displeased patrons; but I am fortunate in having hundreds of letters commending the goods and my method of handling the business.

Ladoga, Ind., Aug. 6, 1912.

Walter S. Pouder, Indianapolis, Ind.

This honey is the finest that I have ever received—even finer than your previous shipment. From experience in buying from different houses I have learned to come to you when I want the best in honey or bee supplies. I find that you give better goods and better service than any other house in the country.

GEORGE L. HAVENS.

South Barre, Vt., Aug. 24, 1912.

Walter S. Pouder, Indianapolis, Ind.

Your paper honey-jars are perfection for local trade.

GEORGE E. MORRIS.

If you are in need of more honey for your local demands I am prepared to supply you promptly with very finest quality.

If my catalog has been misplaced, write me and another will be sent.

Walter S. Pouder, Indianapolis, Ind.

859 Massachusetts Avenue

The season for honey is drawing to a close and you will now be in need of **SHIPPING - CASES**

We carry them in stock at Syracuse, N. Y., and can make prompt shipment, having just purchased a motor truck for delivering goods to the railroads. We have heretofore depended on a truckman, who did not always happen to be on hand.

THE A. I. ROOT COMPANY,
Syracuse, N. Y.

SIX PER CENT DISCOUNT FOR OCTOBER CASH ORDERS

To those who buy now for next season, sending remittance with the order during the month of October subject to the conditions named below, we allow 6 per cent discount.

This discount will apply on all articles listed in our regular catalog at current corrected prices to date except as follows:

Tinned wire, paint, Bingham smokers, Porter bee-escapes, glass and tin honey-packages, scales, bees and queens, bee-books, papers, labels, printed matter, bushel boxes, seeds, and specialties not listed in our general catalog. Where any or all of these articles in a general order do not exceed fifteen per cent of the whole order, the discount may be deducted from the whole order, including these items which are otherwise excepted.

THE A. I. ROOT CO., MEDINA, O.

A Business Proposition.

Your money in the savings bank is drawing 3 per cent, or at most 4 per cent interest. Here is an opportunity to invest it at 12 per cent—8 per cent more than it is now earning.

In most localities this has been a good season for honey and for making increase. Prospects were never better than for the coming season, and you are almost certain to be needing supplies in the spring. If you wait until the first of April or later, you must pay full catalog prices. If your order and remittance are sent in during October, a discount of 6 per cent will be allowed. Six per cent on money invested for six months is equivalent to 12 per cent per annum, figured for six months' time. It looks good, doesn't it? Why not effect this saving by ordering now, and thus also secure the peace of mind that will result from having your supplies all ready when you need them most? Your order can be sent in now, and the goods will be shipped at any time to suit your convenience.

Best goods, best service, best treatment, are insured by sending your orders to OHIO'S BEE-SUPPLY CENTER—special headquarters for beekeepers in Ohio, West Virginia, and Western Pennsylvania. If you haven't a catalog, ask for it.

EDMUND W. PEIRCE
136 West Main St., Zanesville, Ohio

Early- Order Discounts

For years we have followed the example of the factory, and allowed our customers the benefit of the discounts offered by the Root Company for orders placed during the fall months for supplies for use the following season. This discount for October is six per cent for cash with orders, and diminishes one per cent per month as the season advances. We are sure many of our beekeeping friends will want to take advantage of this discount, not only because of the actual cash saving, but because of the convenience of getting goods before the rush of the busy season.

The Goods We Handle

We have said so much about the quality of Root's goods, and they are already so well known by beekeepers, that it hardly seems necessary even to mention the fact, except to remind you that we carry always a full and complete stock of Root's goods only. If you have tried others and they haven't given just the satisfaction they should, send us a trial order this season. For quality of material and accuracy of workmanship you will find them unexcelled.

Our Service

Each season we aim to make some improvement in the service we can give our customers. We aim to keep our stocks always complete, and to allow no order, large or small, to drag through our establishment. The shipping facilities at our command enable us to get goods started to you by direct routes at once. Whether your order is large or small it will have the most careful attention at our hands from the time it reaches us until the goods are in your hands.

Full information on any point regarding beekeeping in the Southwest cheerfully given on request.

How to Keep Bees

By
Anna Botsford Comstock

This is an excellent book for the beginner. Nothing better. We cordially recommend it to all who are learning beekeeping by their own effort. Having commenced beekeeping three times, the talented author is in a position to furnish the right kind of advice. You can not go wrong in ordering this book. It is charmingly written and easily understood.

The Range With a Reputation

The Economy of A New Range

It is a mistaken idea of economy to try to get along—to attempt to get results with an old worn out range or cook stove—merely to save the price of a new one. You can probably stick a knife blade anywhere in the seams of your worn out range where the bolts are loose

and the stove putty has crumbled away and you're burning **twice** the fuel necessary. You can save the price of a **Great Majestic** in the saving of fuel alone—and that would be good management and real economy. Don't trust wholly to a printed description in buying a range, because a very glowing description can be given of a very ordinary range. If you are considering a new range, it will pay you, before investing your money in any range to go to some dealer who handles them and carefully compare, point for point, with any other—the

Great Majestic

Malleable and Charcoal Iron Range

A Perfect Baker—Fuel Saver—Outwears Three Ordinary Ranges

ONLY range made of malleable iron and charcoal iron. Charcoal iron won't rust like steel—malleable iron can't break. Put together with rivets—joints and seams absolutely air-tight always. Oven lined with guaranteed pure asbestos board, covered with an iron grate—you can see it—insuring a dependable baking heat with half the fuel required in ordinary ranges.

All Copper Movable Reservoir—Other Exclusive Features

Reservoir is in direct contact with fire, heats through pocket stamped from one piece of copper—patented feature only in **Majestic**. Oven Thermometer—open end ash pan—ventilated ash pit—ash cup. Sold by dealers in nearly every county in 40 states. Write for our booklet, "Range Comparison."

Fred Leininger & Son, Delphos, Ohio

This Washer Must Pay for Itself

A MAN tried to sell me a horse once. He said it was a fine horse and had nothing the matter with it. I wanted a fine horse. But, I didn't know anything about horses much. And I didn't know the man very well either.

So I told him I wanted to try the horse for a month. He said "All right, but pay me first, and I'll give you back your money if the horse isn't all right."

Well, I didn't like that. I was afraid the horse wasn't "all right" and that I might have to whistle for my money if I once parted with it. So I didn't buy the horse, although I wanted it badly. Now this set me thinking.

You see I make Washing Machines—the "1900 Gravity" Washer.

And I said to myself, lots of people may think about my Washing Machines as I thought about the horse, and about the man who owned it.

But I'd never know, because they wouldn't write and tell me. You see I sell my Washing Machines by mail. I have sold over half a million that way.

So, thought I, it is only fair enough to let people try my Washing Machines for a month, before they pay for them, just as I wanted to try the horse.

Now, I know what our "1900 Gravity" Washer will do. I know it will wash the clothes, without wearing or tearing them, in less than half the time they can be washed by hand or by any other machine.

I know it will wash a tub full of very dirty clothes in six minutes. I know no other machine ever invented can do that, without wearing out the clothes.

Our "1900 Gravity" Washer does the work so easy that a child can run it almost as well as a strong woman, and it don't wear the clothes, fray the edges nor break buttons the way all other machines do.

It just drives soapy water clear through the fibers of the clothes like a force pump might.

So, said I to myself, I will do with my "1900 Gravity" Washer what I wanted the man to do with the horse. Only I won't wait for people to ask me. I'll offer first, and I'll make good the offer every time.

Let me send you a "1900 Gravity" Washer on a month's free trial. I'll pay the freight out of my own pocket, and if you don't want the machine after you've used it a month, I'll take it back and pay the freight too. Surely that is fair enough, isn't it? Doesn't it prove that the "1900 Gravity" Washer must be all that I say it is?

And you can pay me out of what it saves for you. It will save its whole cost in a few months, in wear and tear on the clothes alone. And then it will save 50 cents to 75 cents a week over that in wash-woman's wages. If you keep the machine after the month's trial, I'll let you pay for it out of what it saves you. If it saves you 60 cents a week, send me 50 cents a week till paid for. I'll take that cheerfully, and I'll wait for my money until the machine itself earns the balance.

Drop me a line to-day, and let me send you a book about the "1900 Gravity" Washer that washes clothes in 6 minutes.

Address me this way—H. L. Barker, 737 Court Street, Binghamton, N. Y. If you live in Canada, address 1900 Washer Co., 357 Yonge St., Toronto, Ont.

HONEY AND WAX FOR SALE

FOR SALE.—Light-amber honey, put up in 60-lb. cans. JOHN DREUTH, Kersey, Ind.

FOR SALE.—Extracted clover honey, \$10.50 per case of 120 lbs. M. ISBELL, Norwich, N. Y.

Clover honey of finest quality, in new 60-lb. cans at 9 cts. per lb. J. P. MOORE, Morgan, Ky.

FOR SALE.—Fine light honey, comb and extracted. F. B. CAVANAGH, Hebron, Ind.

Fancy Michigan extracted honey in quantity and packages to suit. A. G. WOODMAN Co., Grand Rapids, Mich.

Fancy and No. 1 white-clover honey, \$8.50 and \$8.35 per case of 24 sections, six cases to carrier. ROBERT GILBERT, White Bear Lake, Minn.

FOR SALE.—Extracted alfalfa honey, in any quantity. Prices on request. WASHINGTON HONEY-PRODUCERS' ASSOCIATION, Sunnyside, Wash.

FOR SALE.—Finest quality new clover honey in 60-lb. tin cans. C. J. BALDRIDGE, Homestead Farm, Kendaia, N. Y.

Very fine quality of raspberry-milkweed honey in new 60-lb. cans at 9 cts. P. W. SOWINSKI, Bellaire, Mich.

Fine white and light amber alfalfa honey put up in any size of tin package, any quantity. DADANT & SONS, Hamilton, Ills.

FOR SALE.—New buckwheat extracted honey in 60-lb. and 200-lb. kegs. B. B. COGGSHALL, Rt. 12, Groton, N. Y.

Comb honey capped white in shallow frames, 12½ cts. per lb., f. o. b. here crated. Extracted amber in 60-lb. cans, \$6.00. Samples, 5 cts. JOHN W. CASH, Bogart, Ga.

FOR SALE.—Two carloads of choice sage honey by the can or case. Samples of honey and desirable California souvenir free for a stamp. C. W. DAYTON, Chatsworth, Cal.

Our fall crop of comb honey at \$3 per case of 24 sections, well filled, six cases to carrier; extracted, 8 cts. to 9 cts.; two sixty-pound cans to case. QUININ-THE-QUEEN-BREEDER, Bellevue, Ohio.

FOR SALE.—Extra fine quality of clover and basswood honey in new 60-lb. cans, two in a case, at 10 cts. per lb. Large sample, 8 cts., which may apply on first order sent in. EDW. A. REDDOUT, Box 43, Lysander, N. Y.

FOR SALE.—22 tons of honey, finest quality; raspberry, and a blend of raspberry and milkweed, raspberry and basswood, in new 60-lb. cans, two in case, at 9 cts.; whole lot 8½ cts. J. N. HARRIS, Mancelona, Mich.

FOR SALE.—White-clover and basswood extracted honey, blended in the extractor; put up in brand-new 60-lb. cans, 2 cans per case, at \$12 per case of 2 cans or more, F. O. B. Flint. Cash with order. This honey is the finest I have ever produced. L. S. GRIGGS, 711 Avon St., Flint, Mich.

RASPBERRY HONEY.—Our crop of raspberry honey this season is very fine—the best in quality I ever saw. It was left on the hives until it was all sealed, and thoroughly ripened by the bees. Thick, rich, and delicious. It is put up in new 60-lb. tin cans. Price \$6.00 per can. Large-sized sample by mail, 10 cts. Said 10 cts. may be deducted from any order sent for honey.

ELMER HUTCHINSON, Pioneer, Mich.

HONEY AND WAX WANTED

WANTED.—Comb, extracted honey, and beeswax. R. A. BURNETT & Co., 173 S. Water St., Chicago.

WANTED.—No. 1 white-clover comb honey. Give quantity, description, and price wanted. Will pay cash or exchange bee-supplies. E. W. PEIRCE, Zanesville, Ohio.

WANTED.—Honey wholesale. Would like to hear from those having comb honey in car lots to market. Heretofore we have at times sustained the market by buying heavily and holding, on one occasion carrying some 40 carloads three months. If you need us let us hear from you with particulars. THOS. J. STANLEY, Manzanola, Otero Co., Col.

WANTED.—Car of light-medium or dark-amber extracted honey in cases of two five-gallon cans. We prefer the light amber to the dark, but can use quite a quantity of either grade provided the flavor is mild. Our trade does not want a pronounced-flavored honey. Submit a two or four ounce sample and quote your best prices delivered to your railroad station.

THE A. I. ROOT Co., Medina, Ohio.

FOR SALE

A full line of Root's goods at Root's prices. A. L. HEALY, Mayaguez, Porto Rico.

FOR SALE.—300 bushels metatias seed, \$2.00 per bushel, f. o. b. Macon, Miss. HUBBARD BROS., Rt. 1, McLeod, Miss.

FOR SALE.—Root or Falconer bee supplies. Free catalog. Save freight. G. F. STANTON, Buckingham, Fla.

For section extractors and entrance feeders, ask for circulars. A. H. OPPER, 6259 Paterson Ave., Chicago.

For sale or exchange for income-bearing property, our entire business, 1500 colonies of bees and fixtures. Reason for selling, poor health. OGDEN BEE AND HONEY Co., Ogden, Utah.

FOR SALE.—A full line of beekeepers' supplies; also Italian bees and honey a specialty. Write for catalog and particulars. THE PENN CO., (Successor to J. M. Jenkins.) Penn, Miss.

New crop white-sweet-clover seed, 4 lbs. by mail, prepaid, \$1.12; 50 to 100 lbs., 15c. per lb., hulled; unhulled, 3c. less. Alfalfa seed, same price. R. L. SNODGRASS, Rt. 4, Augusta, Kan.

SEED WHEAT.—Improved Poole seed wheat—one of the highest yielders at the Ohio Experiment Station, where this seed originated. Guaranteed free from all foul seeds. Re-cleaned ready for drilling. Write for prices. L. H. RANDALL, Medina, O.

and pure mating guaranteed. Untested, 75 cts.;
doz., \$7.00. E. A. SIMMONS, Greenville, Ala.

Golden Italian queens, nuclei, and full colonies.
See price list, Gleanings, May 15, page 8.
ISAAC F. TILLINGHAST, Factoryville, Pa.

FINE ITALIAN QUEENS.—Prolific, hardy, gentle.
Root strain. Untested 75 cts. each; 6 for \$4.25.
J. F. ARCHDEKIN, Rt. 7, St. Joseph, Mo.

FOR SALE.—Three-banded Italian queens bred for
honey, gentleness, and prolificness. One, \$1.00; 6
for \$5.00. WM. S. BARNETT, Barnett's, Va.

FOR SALE.—Golden untested queens, 75 cts. each,
or \$7.25 dozen; safe arrival guaranteed.
D. F. TALLEY, Rt. 4, Greenville, Ala.

Hardy northern-grown queens of Moore's strain
of Italians, ready for prompt shipment. Untested,
\$1.00, 6 for \$5.00; 12 for \$9.00. Write for lots
of 50 or more. P. B. RAMER, Harmony, Minn.

Italian queens by return mail. Untested, \$1.00;
tested, \$1.50 after Oct. 1st. Have a few Carni-
olans, Italian mated; will close them out at 60 cts.
each. Send to-day E. E. MOTT, Glenwood, Mich.

Three-banded Italian queens. Best honey-gath-
erers. Untested, 50 cents each. Can fill orders
promptly. No disease.
W. D. ACHORD, Fitzpatrick, Ala.

Colonies of Italian bees in L. hives, 10-fr., built
on full brood-frames, wired, body and shallow super,
redwood, dovetailed, three coats white, sheeted lids;
each neat, modern, and full of stores—any time.
JOS. WALRATH, Antioch, Cal.

Golden Italian queens that produce golden bees,
the brightest kind. Gentle, and as good honey-gath-
erers as can be found. Each, \$1.00; six, \$5.00;
tested, \$2.00; breeders, \$5.00 to \$10.00.
J. B. BROCKWELL, Barnetts, Vt.

FOR SALE.—Moore's strain and golden Italian
queens, untested, \$1.00; six, \$5.00; twelve, \$9.00.
Carniolan, Banat, and Caucasian queens, select,
\$1.25; six, \$6.00; twelve, \$10.00. Tested, any kind,
\$1.50; six, \$8.00. Choice breeders, \$3.00. Circular
free. W. H. RAILS, Orange, Cal.

FOR SALE.—Twenty-eight colonies of bees in
standard 8-frame hives; hardy and vigorous North-
ern-bred Italian stock, and fine honey-getters;
averaged 180 lbs. this year. In good condition for
winter, Oct. 1; \$4.00 per colony, or \$5.00 with
telescope cap. (Removal, cause of sale).
L. V. ALWIN, Waldheim, New Ulm, Minn.

FOR SALE.—800 colonies of Italian bees, more or
less, situated in five yards; all in good condition, on
this beautiful island of Jamaica, a land of perpet-
ual sunshine; flowers nearly the whole year round;
good investment for a practical up-to-date beekeeper
to take hold of now. Write for further particulars.
DAVID MARCHALLECK,
Morant Bay, Jamaica.

FOR SALE.—Italian queens, bred from the best
honey-gathering strains obtainable. Untested, 75
cts.; select, \$1.00; tested, \$1.25; select tested, \$1.50.
Nuclei without queen, one frame, \$1.50; two frame,
\$2.00; three-frame, \$2.75. For queens and nuclei
in quantity lots, and bees by the pound, write for
prices and circulars. Virgin queens from my best
breeders, 40 cts. each; three for \$1.00.
ROBT. B. SPICER, Wharton, N. J.

FOR SALE.—North Carolina-bred Italian queens,
bred up for business; none better for honey-gath-
ering; good recommendations coming in almost every
day. I have Root's and Moore's strain, Davis',
Quirin's, Laws', and choice imported breeders, to
get my fine honey-gathering strain from. I breed
all queens in full two-story colonies running over
with bees at all times. I don't keep any thing but
the red clovers and the Goldens in my yards. Try
them and see for yourself. Untested, 75 cts.; doz.,
\$7.00; tested, \$1.25; select tested, \$1.50. Extra
select tested, \$2.00. Select breeders, \$3.00. Extra
select, \$5.00. H. B. MURRAY, Liberty, N. C.

MISCELLANEOUS

White and brown ferrets. Stamp for description
and prices. JEWELL'S FERRET KENNELS, Spencer, O.

these dates will please notify us by post card, if
they wish to exchange either number for a two
months' credit on time of subscription.
The A. I. ROOT COMPANY, Medina, Ohio.

HELP WANTED

WANTED.—Four or five helpers to assist me in a
large house-to-house honey-selling business. A rare
chance to learn a business that will pay a fancy
income. JOHN C. BULL, Rt. 8, Valparaiso, Ind.

WANTS AND EXCHANGES

WANTED.—To rent or buy an apiary of 100 colonies of bees. ELMER McCANN, Continental, O.

WANTED.—To buy bees in Southern California. BEEKEEPER, Lock Box 16, Surrey, Cal. 39935.

WANTED.—To exchange 190 acres and 30-room hotel for bees and supplies of honey. ERNEST W. FOX, Clint, Texas.

WANTED.—To exchange Root bee supplies, either for money or honey. Catalog. E. W. PEIRCE, Zanesville, Ohio.

WANTED.—Bees, anywhere from 50 to 500 stands. State prices. Address BOX 135, Ceres, Cal.

REAL ESTATE

\$4000 buys my fine quarter section located in the great grain district of Saskatchewan, Can. D. E. LHOMMEDIEU, Colo, Iowa.

FOR SALE.—Seven-room house with pantry and closets; nearly new, in good town of 3000. Also 125 colonies of bees with fixtures to run the same. Extracted honey for sale. Best alfalfa, \$10.00 per case of 120 pounds, f. o. b. here. W. H. BIRNEY, Las Animas, Col.

FOR SALE.—Store and dwelling combined; good trade; $\frac{1}{4}$ acre of land; 10-room house; excellent place for chickens, also for bees; not a poor year in ten. The right place for a good man. The one selling wishes to retire from business. Will sell store, goods, chickens, and bees, if wanted. Write for particulars. W. H. FANNING, Shunk, Pa.

FOR SALE.—Farm of 90 acres in Ulster Co., New York. Well suited for bees, poultry, fruit, and dairy; $\frac{1}{4}$ mile from creamery and depot. Particulars gladly given. Price \$4000—\$2500 cash. STEPHEN R. CHRISTOPHER, West New Brighton, N. Y.

FOR SALE.—Apiary of 105 colonies of bees, with or without location, $\frac{3}{4}$ of an acre of ground in the edge of village, and planted to all kinds of fruit; about 40 trees are now bearing. Beeyard is enclosed with six-foot tight fence, which is lined inside with grapevines, currants, gooseberries, and blackberries. Frame shop and honey-house $1\frac{1}{2}$ story; 65-barrel cistern; corncrib; chicken and hog yards; every thing one needs but dwelling house. This would be a fine location for a queen-breeder—not over a dozen colonies of bees within $1\frac{1}{2}$ miles of the yard. No disease, and have never had any. The bees are all in good shape; hives as good as new; combs built on Hoffman frames; wired foundation, except possibly 100 frames. I spent \$500 in fitting up my yard, not counting my labor. Land sells here from \$200 to \$400 per acre. I am nine miles below Zanesville, on the Muskingum River, overflowing creek and river bottoms west, south, and east of me. The location is No. 1; I have had but one failure in 21 years that I have kept bees; good market for honey near. My crop is sold, and not all off yet, at \$3.75 per case. Any one buying the property will get good hive-stands, what winter cases I have, shade-boards, cushions, etc. I will take \$1000 for ground and bees, and a low price for extras, or will sell the bees, to be moved, for \$500. J. F. TRUEBELL, Duncan's Falls, Ohio.

POULTRY

BUTTERCUPS.—We have some fine young stock for sale. For prices, write RIVERVIEW POULTRY FARM, Union City, Mich.

Ringlet barred Rocks, choice breeding cockerels for sale. Correspondence cheerfully answered. W. H. PORTER, Rt. 23, Sandy Lake, Pa.

INDIAN RUNNER DUCKS

Fawn and White Indian Runner duck eggs, \$1.00 per 11; \$7.00 per 100. Day-old ducklings, 25 cts. each. Mailing list free. KENT JENNINGS, Mt. Gilead, Ohio.

INDIAN RUNNER DUCKS, American Standard light fawn, and white. I have a fine lot of one-year-old breeders for sale at a real bargain price. I can start you, and start you with the best. Write me. C. O. YOST, Rt. 4, Box D, Winchester, Ind.

BEEKEEPERS DIRECTORY

Nutmeg Italian queens, leather color, after June 1, \$1.00. A. W. YATES, Hartford, Ct.

Well-bred bees and queens. Hives and supplies. J. H. M. COOK, 70 Cortlandt St., New York.

Improved golden-yellow Italian queens for 1912; beautiful, hustling, gentle workers. Send for price list to E. E. LAWRENCE, Doniphan, Mo.

QUEENS.—Improved red-clover Italians, bred for business; June 1 to Nov. 15, untested queens, 75 cts.; select, \$1.00; tested, \$1.25 each. Safe arrival and satisfaction guaranteed. H. C. CLEMONS, Boyd, Ky.

Quirin's famous improved Italian queens, nuclei, colonies, and bees by the pound, ready in May. Our stock is Northern-bred and hardy; five yards wintered on summer stands in 1908 and 1909 without a single loss. For prices, send for circular. QUIRIN-THE-QUEEN-BREEDER, Bellevue, O.

Convention Notices

The annual meeting of the Northern Illinois and Southern Wisconsin Beekeepers' Association will be held in the court-house in Rockford, Ill., October 15. All interested in beekeeping are cordially invited to attend. B. KENNEDY, Sec. Rockford, Ill.

Bro. Beekeepers of Indiana:—By persistent and organized effort we have a fairly satisfactory bee-inspection law for Indiana, and a small appropriation to carry out its provisions.

This law has been fairly well enforced, and has done much by education to stop the ravages of foul brood. Various efforts have been made to take even this small appropriation away from us, and there will be a much stronger one made with the coming legislature. The beekeepers of Indiana can not afford to take a single step backward now, and I would urge that every beekeeper in the State enroll himself with the Indiana branch at least, and endeavor by all possible means to retain our present laws.

I should like to get in touch with every beekeeper in the State, and I would take it as a personal favor if you would send me your own name and address, and that of your beekeeping friends and neighbors.

GEO. W. WILLIAMS,
Sec. Indiana Branch, N. B. A.
Redky, Ind., Sept. 15.

SPECIAL NOTICES

BY OUR BUSINESS MANAGER

SIX-PER-CENT EARLY-ORDER DISCOUNT.

The early-order discount for cash orders received during the month of October for goods for next season's use is 6 per cent. Quite a number have taken advantage of the extreme discount available during the past month, and have sent in good-sized orders. We expect to hear from a larger number during October.

EDISON PHONOGRAPH.

We have taken in exchange for a comb-foundation mill an Edison phonograph in excellent condition, of a style which sells new for \$30.00. There go with it twenty records and two large concert horns. The records sell regularly at 50 cts. each, and the horns at \$3.00 to \$5.00 each. Two or three of the records are slightly damaged. We offer the lot for \$20 cash, which is less than half the value of new apparatus.

SPECIAL NOTICES

A. I. ROOT

Mr. Root:—While you are exposing these Florida land swindlers, how about the thousands of farmers that were swindled in sending for their seed corn last spring? I think we need grain inspectors to test all seeds handled by seed firms, and stop this shipping out worthless seed.

Tuscola, Ill.

JOHN HUNT.

Friend H., I do not know about the seed-corn swindles you allude to; but I do know that our experiment stations recommend that every farmer should grow and save his own seed corn. Corn gets "homesick" when taken to a new locality.

HIGH-PRESSURE GARDENING (?)

Two readers of GLEANINGS have clipped out the following advertisement, and sent it to me, asking my opinion of it:

"ELLIS POTATO SYSTEM." HOW TO GET 300 TO 400 BUSHELS OF POTATOES TO THE ACRE.

You ought to be ashamed to grow less. It can be accomplished by the "Ellis Potato System." This is not a book, but special information that will enable you to grow 300 bushels or more on your fields by following our instructions. This system covers all points of potato-growing, from seed to digging. Seven hundred bushels an acre under this system is common. Don't be an 85-bushel man when you can get 300 bushels with no more work or expense, simply knowing how. When you consider that all the way from 600 to 1300 bushels an acre have been produced by this system you may well decide to see what you can do. You now have the chance—it's all in knowing how. Send \$3.00 today for the "Ellis Potato System." Don't wait—start now for next year. Address "Ellis System," 1532 Mars Ave., Lakewood, Ohio.

I agree with the above in so far as to its "being a shame" to grow only 85 bushels of potatoes to the acre; and I do think there should be no great trouble in getting 300—that is, if you have a *man* equal to the task; but when it comes to 600 bushels, or more than twice as much, while it is possible it is not probable that the average farmer could get any such result. I sent the three dollars promptly, and re-

ceived in reply a lot of questions which I am to answer. Then Mr. Ellis is to give me personal instructions, something on the plan of the "correspondence schools." He replied that it would take up something like three weeks to go over my situation carefully, and give me practical advice. So far as I have been able to learn, he furnishes no sort of book or treatise in regard to potato-growing in general; and I would ask our friends to wait before investing, until I see what I am to get for my three dollars. In his reply he says he is well aware that Terry and I are authors of the A B C of Potato Culture.

OUR DUCKS, AND SOME OTHER THINGS DOWN IN OUR FLORIDA HOME.

Mr. Root:—Since I wrote, the old duck (one of those you brought from Ohio) died, June 30. She had not acted right for ten days, but laid up to the fourth day before she died. Since that the other old one disappeared during the night. She was very thin, and had not laid for some time. About a month ago one of the young ducks, after refusing to eat for several days, disappeared also. An alligator killed one of mine, about three months old, two weeks ago; but he will get no more, as I caught him in a wolftrap a few days after. There are now twenty ducks and seven drakes. I think four drakes are enough. There are four nearly all white, and I think they are the best to keep.

We have been having rather warm weather lately, and not much heavy rain, which favors the egg crop. In July they laid about 12 a day; in August, 15; and so far this month, 17. The eggs, most of them, are nearly full size now. I feed them five quarts of corn at 5:30 P. M., which they consume in about two minutes, and then sit down as if about tired out after their hard day's work. The next morning they rush to meet me, with a noise that is almost deafening. The eggs are not as salable as hens' eggs, especially the tinted ones. I notice that the white ducks lay the white eggs. I think it will be well to set only light eggs, so as to get rid of the tinted ones, which, I think, would overcome the whole difficulty.

Bradentown, Fla., Sept. 3. C. A. MORGAN.

P. S.—The moccasin that was such a terror to the ducks was carried down by the flood to the corner of my lot, near the bridge, and Herbert killed him. He was the largest I ever saw. The new bridge is finished, but not the approaches.

LATER.—We have had another downpour, so I have kept the ducks in since the 7th. That means more corn and fewer eggs. I got nine to-day. I shall be able to let them out in a few days. Eggs are 30 cents now, and will be dearer in a few weeks. Roads are in a terrible condition.

C. A. MORGAN.

Honey Reports continued from page 5.

CINCINNATI.—The demand for both extracted and comb honey is not up to expectations by far for this time of the year. Big buyers refuse to pay the prices we must ask, and we fear that it will be a case of a small business or lower prices; and owing to the high prices we have paid, it will be impossible for us to lower our price. We are selling strictly fancy comb honey at 14 to 16½, according to the quantity and quality purchased; amber comb honey is not wanted at any price. What little is sold of fancy extracted honey in 60-lb. cans, we are getting 8 to 10 for it, while amber honey in barrels we are selling at 5½ to 7, according to the grade and quantity purchased. There is plenty of beeswax, and the prices are much easier than they have been for some time. We are paying 23 delivered here for choice bright yellow beeswax.

Cincinnati, Sept. 18. THE FRED W. MUTH CO.

HONEY LABELS

There is nothing that adds more to the attractiveness of a honey package than a neat label carefully worded and of the proper style. The guarantee of purity by the producer put on every package he offers for sale is the best protection he can get from the stories of adulteration that injure the sale of his product.

For glass packages a small label is generally preferred, while for tin, one that laps around the package is considered best. We supply both gummed and ungummed labels. We recommend the ungummed, however, for they adhere more readily when pasted on a package, and are not affected by changes in the atmosphere as are the gummed.

We give on the opposite page a few illustrations of some of our stock patterns. These are printed, some of them in two or more colors, some in bronze on glazed paper, and some in black on glazed paper. To get a very adequate idea of these you ought to see samples printed on regular label stock in the proper colors. We have a catalog which shows just what we can furnish in this line, and we shall be glad to send it on request.

Just now we can give very prompt attention to orders for this label work. We can furnish special labels too if you tell us what you want. Of course the price is higher than for our regular patterns; but if you are buying them in very large quantities you may want something to suit your individual tastes. Let us do your label work for you, for we can guarantee satisfaction.

The A. I. Root Co., Medina, O.

No. 90.—Bronze on glazed paper, same price as No. 89.

No. 89.—Bronze on glazed paper, 250, \$1.00; 500, \$1.50; 1000, \$2.25; 2000, \$4.00.

No. 94.—Bronze on glazed paper, 250, 90c.; 500, \$1.50; 1000, \$2.00; 2000, \$3.50.

Wording on all labels changed to suit. Labels trimmed to margin. Above prices are on ungummed stock.

No. 91.—Bronze on glazed paper, 250, \$1.00; 500, \$1.50; 1000, \$2.25; 2000 \$4.00.

These Remarkable Books Practically

FREE

We have now completed arrangements by which we offer all readers, in connection with special subscription offers, any of this great series of booklets called

“MONEY-MAKING SECRETS”

POULTRY SECRETS: First published in 1908, this collection of the carefully-guarded secrets of famous poultrymen created a sensation in poultry circles. Every secret is valuable and every one has passed severe tests of its usefulness. 64 pages, illustrated. 15th Edition, 110th thousand.

HORSE SECRETS: Compiled and written by DR. A. S. ALEXANDER, of Wisconsin, the eminent veterinarian. Exposes the swindling methods of “gyps” and crooked dealers. Also many feeding and fattening secrets. Invaluable to horse buyers and owners. 64 pages, illustrated. 9th Edition, 85th thousand.

THE MILLION EGG FARM: Describing the enormous business and plant of J. M. Foster's Rancocas Farm, where 18,000 laying hens produced last year the amazing total of 1,121,478 eggs. Written specially for beginners. 80 pages, profusely illustrated. 4th Edition, 35th thousand.

THE CURTISS POULTRY BOOK: The story of the Curtiss brothers and their great Niagara Farm, built up from nothing to an annual business approximating \$100,000 per year. Ducks, eggs, broilers, and cut clover are their staples. A remarkable story. 56 pages, illustrated. 3rd Edition, 30th thousand.

DRESSMAKING SELF-TAUGHT: For girls and women who wish to learn dressmaking quickly and thoroughly, either for making their own clothes or as a business. Twenty lessons by an expert. Clear, comprehensive, practical, new. 64 pages with diagrams.

DUCK DOLLARS: There is money in ducks. The Weber brothers market about 40,000 ducklings each year, and make a clearnet profit of 50 cents on each one. This new booklet tells exactly how, with valuable advice for beginners as to operation and markets. 88 pages, illustrated.

FALL-BEARING STRAWBERRY SECRETS: The first complete hand-book covering the culture of this wonderful new fruit. Any one who can raise June strawberries can raise the Fall-bearers, but culture is different. Those who started first are reaping the high market profits. 64 pages, illustrated.

TURKEY SECRETS: The way to make turkeys a profitable farm crop, as demonstrated by HORACE VOSE of Rhode Island, the veteran turkey raiser who supplies the turkey for the President's Thanksgiving dinner each year. Instructive and enlightening. 64 pages, freely illustrated.

GARDEN GOLD: A new booklet written for people with small gardens, showing how to raise your own vegetables in these days of high prices, and SAVE money. And how to MAKE money by selling your surplus. Splendid for people with back yards only. 64 pages, illustrated.

SHALL I FARM? For city people trying to decide whether or not to go to the country. No golden promises, but a clear, impartial, unbiased, unprejudiced weighing of the subject. All the advantages and disadvantages of all kinds of farming plainly set forth. Nothing like it ever before printed. 64 pages.

So popular are these booklets, and so valuable their contents, that nearly

400,000 COPIES HAVE BEEN SOLD

during the last three years. Each is the very latest work in its own particular field—together they cover new discoveries, secret methods, exposures, new systems, little known information, and astonishing achievements in many lines.

We Offer { Any one of these booklets, postpaid } All three for **\$1.00**
{ (Your Choice), “GLEANINGS,” 1 year, }
{ FARM JOURNAL, till December, 1915 }

\$1.50 to subscribers in Canada, Philadelphia, and foreign countries, on account of extra postage. Extra booklets, 20c. each. Booklet and papers may go to different addresses if necessary, but these

BOOKLETS CANNOT BE OBTAINED SEPARATELY—ONLY IN THIS COMBINATION.

THIS PAPER is well known to you, and requires no description or praise here.

The FARM JOURNAL is the standard farm and home paper—foremost in the world. It has more than 750,000 subscribers. It is up-to-date, clean, boiled-down, honest. It knows what to say, and can stop when it has said it. It is for the poultryman, gardener, horse owner, dairyman, grain grower, fruitman, the farmer, the villager, the suburbanite, the man who lives in the country, and those who would like to, the women folks, the boys and girls. In short, it is for YOU. Cheerful, entertaining, intensely practical, absolutely clean. When the time is up it will stop.

The background of the entire page is a detailed, dark-toned honeycomb pattern. The hexagonal cells are uniform in size and shape, creating a textured, grid-like appearance that covers the entire surface.

Cleanings in Bee Culture

VOL. XL. OCT. 15, 1912, NO. 20.

Nearly 500 Subjects Pertinent to Modern Bee-keeping are Authoritatively Discussed

ADVANCED BEE CULTURE is a beautifully printed book. Best plate paper has been used throughout its 200 pages, with the result that the many fine illustrations are unusually clear in every detail. Bound in attractive and substantial cloth. A volume whose appearance and unquestionable worth justly entitle it to a place in the library of every bee-keeper. No more important work on this fascinating subject has recently appeared.

The untimely death on May 30, 1911, of Mr. W. Z. Hutchinson, author of

Advanced Bee Culture

marked the passing of one of the most brilliant writers who have ever championed the cause of the honey-bee. . . . Perhaps no better tribute to this talented man could be given than that contained in the following paragraph from a testimonial article on MR. HUTCHINSON'S life by Prof. A. J. Cook, in GLEANINGS:

"No one could know him and his work without convincing proof that he stood in the very front ranks of our bee-keeping fraternity. His quick intellect, coupled with his close attention to details, won for him, at the very start, phenomenal success as a queen-breeder. To this, apiculture owes its great good fortune in securing his life-long service in its development. He was temperamentally exact and methodical, transparently honest, and if I were to select one word to characterize our brother it would be genuineness. He was delightfully companionable, and always alert for any new idea or suggestion touching the interests of the work, to which he was so entirely devoted. His quick apprehension and terse clear-cut style, as a writer, made him a most reliable exponent of all that was latest and best in the theory and practice of his beloved art."

Most fortunate for all bee-keepers is the fact that Mr. Hutchinson's life was spared just beyond the point when he had completed his reading and correction of the editorial proofs of the new edition of ADVANCED BEE CULTURE. Only a few short days after an editorial by Mr. E. R. Root, editor of GLEANINGS IN BEE CULTURE, who revised Mr. Hutchinson's book, had appeared, the call came, and this sterling, upright man, whom everybody loved, was taken home. Read what Mr. Root has to say of Mr. Hutchinson's book:

As a writer on bees Mr. Hutchinson has few equals. For clearness of style and accuracy of judgment he is second to none. His enthusiasm shines forth on every page. His selection of the new and the useful from an extended discussion is intuitive. The last edition of "Advanced Bee Culture," as well as the new edition before, is made up of the best ideas of our best experts, properly classified and condensed by a master of the art of boiling down discussions. I do not hesitate to say that this is one of the most valuable books on bees that was ever put out; and while its title would indicate that it is designed only for the advanced bee-keeper, yet I am sure that a large number of beginners in the business will find it exceedingly helpful and interesting, especially if they will take it in connection with some other work like the "A B C and X Y Z of Bee Culture," or any text-book designed especially for the beginner class.

\$1.50 Buys a Two-dollar Value

ADVANCED BEE CULTURE costs \$1.00 per copy. GLEANINGS IN BEE CULTURE (semi-monthly)—known and read by bee-keepers throughout the world—\$1.00 for an annual subscription. It is our pleasure, however, to offer this interesting and most useful combination—the book here described, and GLEANINGS one year, both for \$1.50. It is a value you will very seldom find—really it is a good \$2.00 worth for \$1.50.

Foreign postage, 60 cents extra; Canadian postage, 30 cents extra.

HONEY MARKETS

The prices listed below are intended to represent, as nearly as possible, the average market prices at which honey and beeswax are selling at the time of the report in the city mentioned. Unless otherwise stated, this is the price at which sales are being made by commission merchants or by producers direct to the retail merchants. When sales are made by commission merchants the usual commission (from five to ten per cent), cartage, and freight will be deducted; and in addition there is often a charge for storing by the commission merchant. When sales are made by the producer direct to the retailer, commission and storage and other charges are eliminated. Sales made to wholesale houses are usually about ten per cent less than those to retail merchants.

EASTERN GRADING RULES FOR COMB HONEY.

FANCY.—All sections well filled, combs straight, firmly attached to all four sides, the combs unsoiled by travel-stain or otherwise, all the cells sealed except an occasional one, the outside surface of the wood well scraped of propolis.

A No. 1.—All sections well filled except the row of cells next to the wood; combs straight; one-eighth part of the comb surface soiled, or the entire surface slightly soiled; the outside surface of the wood well scraped of propolis.

No. 1.—All sections well filled except the row of cells next to the wood; combs straight; one-eighth part of the comb surface soiled, or the entire surface slightly soiled.

No. 2.—Three-fourths of the total surface must be filled and sealed.

No. 3.—Must weight at least half as much as a full-weight section.

In addition to this the honey is to be classified according to color, using the terms white, amber, and dark; that is, there will be "Fancy white," "No. 1 dark," etc.

NEW HONEY-GRADING RULES ADOPTED BY THE COLORADO STATE BEEKEEPERS' ASSOCIATION, DECEMBER 13, 1911.

FANCY WHITE.—Sections to be well filled, comb firmly attached on all sides and evenly capped, except the outside row next to the wood. Honey, combs, and cappings white, and not projecting beyond the wood. Wood to be well cleaned; no section in this grade to weigh less than 13½ ounces.

No. 1.—Sections to be well filled, combs firmly attached on all sides and evenly capped, except the outside row next to the wood. Honey white or very light amber; comb and cappings from white to slightly off color. Comb not projecting beyond the wood; wood to be well cleaned; no section in this grade to weigh less than 13½ ounces.

CHOICE.—Sections to be well filled; combs firmly attached; not projecting beyond the wood, and entirely capped, except the outside row next to the wood. Honey, comb, and cappings from white to amber, but not dark; wood to be well cleaned; no section in this grade to weigh less than 12 ounces.

No. 2.—This grade is composed of sections that are entirely capped, except row next to wood, weigh-

ing from ten to twelve ounces, also of such sections that weigh 12 ounces or more, and have not more than 50 uncapped cells all together, which must be filled. Combs and cappings from white to amber in color, but not dark; wood to be well cleaned.

EXTRACTED HONEY.—Must be thoroughly ripened; weigh 12 pounds per gallon. It must be well strained, and packed in new cans. It is classed as white, light amber, and amber.

STRAINED HONEY.—This is honey obtained from combs by all other means except the centrifugal extractors, and is classed as white, light amber, amber, and dark; it must be thoroughly ripened and well strained. It may be put up in cans that previously have contained honey.

BOSTON.—We quote fancy white comb at 16 to 17; No. 1 white comb, 15 to 16; fancy white extracted, 10 to 11; light amber, 9 to 10; amber, 8. Beeswax, 30.

Boston, Oct. 8.

BLAKE-LEE CO.

ALBANY.—Honey market quiet, with light receipts, and crop very light in this section. We quote white clover at 15 to 16; mixed, 14 to 15; buckwheat is scarce at 13; extracted white, 8 to 9; buckwheat and amber, 7½. Beeswax, 30 to 32.

Albany, N. Y., Oct. 2.

H. R. WRIGHT.

DENVER.—We quote our local market in a jobbing way as follows: No. 1 comb, per case of 24 sections, \$3.15; choice, \$3.00; No. 2, \$2.85. White extracted, 9; light amber, 8; strained, 6¾ to 7½. We pay 26 in cash or 28 in trade for clean yellow beeswax delivered here.

THE COLORADO HONEY PRODUCERS' ASS'N.

Denver, Col., Oct. 4. F. RAUCHFUSS, Mgr.

SCHENECTADY.—Our market is in fine shape, both comb and extracted honey moving off freely. There seems to be a scarcity of buckwheat, especially extracted, and we are unable to fill large orders at present. We quote fancy white clover in cartons at 16 to 18; No. 1, 15 to 16; other grades, 13 to 14; buckwheat fancy, 13; No. 1, 12; mixed, 11 to 12. Extracted, light, 8 to 9; dark, 7 to 8.

Schenectady, N. Y., Oct. 2. CHAS. MACCULLOCH.

ZANESVILLE.—The local market is not very strong for extracted honey; but there is a staple demand for comb, and up to the present time the available supply has been inadequate. There should be a pretty good movement during October and November, and producers who are awake to their best interests should dispose of their crops before December 1, as our experience is that the demand is very slack just before and for a month or two after the holidays; and any change in prices is likely to be downward rather than upward at that time. For the better grades of white comb, 18 to 19 cents is the prevailing price, with some concession on quantity orders. White extracted in 60-lb. cans, 9½ to 11. Producers receive for beeswax, 28 cts. cash, 30 in trade.

Zanesville, O., Oct. 2.

E. W. PEIRCE.

SURE, OLD COMBS ARE VALUABLE

IF shipped to us for rendering. . . WE EXTRACT 99½ per cent OF WAX, and then pay you Highest Market Prices, or 2 cents additional in trade. . . YOU CAN'T APPROACH THAT FOR PROFIT. . . We need great quantities of Comb and Extracted Honey. . Write us.

The Best Time to Buy Supplies

The season just past has demonstrated more clearly than ever the necessity for being prepared for a honey-flow **BEFORE** it comes. If you wait until the season is upon you, the chances are that the greater part of the crop will be lost while you are impatiently waiting for supplies to arrive. It may seem a little early now to think of next season's honey harvest; but the fact of the matter is, this is just the time to order goods for next season.

We are beginning now to replenish our stocks. We shall have carload orders coming from the factory very often for the next few weeks. Special orders placed now can have just the attention they need, both here and at the factory, and you may have your goods sent in one of our cars, thereby saving on transportation charges. Regular stock will come straight to you from our warehouse in new unbroken packages, and you can put the goods together in your odd minutes, thereby saving the expense of extra help in the spring.

Our usual discounts for early orders apply again this season—six per cent for cash orders sent in October, the discount diminishing one per cent per month as the season advances. These discounts mean a considerable saving, and you might as well take advantage of the highest by ordering now. No change of prices has as yet been announced, and you may, therefore, order from your present catalog. If your catalog has been mislaid, write us at once and we will send another.

If your season's crop of honey is not yet disposed of, we can give you a good price and handle it promptly. Send samples of extracted and full information as to containers, flavor, quantity, price, etc. We also handle comb honey.

Honey reports continued from page 2.

BUFFALO.—There is some improvement in the demand for white comb honey. Prices are not high; but in order to move freely we must keep at about as quoted. No accumulation in the market. Conditions are favorable for a free movement. No dark arriving. We quote: Fancy white-clover comb, 16; No. 1 to choice, 15 to 16; No. 2, 12 to 14. Arrivals of white extracted are very light, and sell at 8½ to 9.

Buffalo, N. Y., Oct. 9. W. C. TOWNSEND

CHICAGO.—During September honey has sold in a very satisfactory way. Nearly all the receipts were taken upon arrival and the price has been well maintained on comb honey. Most of the No. 1 white sells at 16 to 17, and the A No. 1 to fancy at 17 to 18. The amber grades have sold at from 12 to 15, according to color and flavor. At present there is an easy feeling, and prices are likely to recede from those herein given. Extracted continues to sell at 8 to 9 for the white grades, with the lindens bringing 10 if of high flavor and quality. Amber grades range at from 7 to 8, according to color, flavor, and quality. Beeswax is steady at from 30 to 32.

Chicago, Oct. 2. R. A. BURNETT & Co.

ST. LOUIS.—The demand for choice new comb honey is very good, and the supply is inadequate. There is considerable comb honey of inferior quality coming from the South, which moves very slow. We quote fancy white at 16 to 17; No. 2 white, 15; amber, 13 to 15; dark, 9 to 11; broken and inferior quality is not wanted in this market. The demand for extracted honey is also good, and quotable as follows: Light-amber Southern in barrels and half-barrels, 7 cents; in five-gallon cans, 7½. The receipts of white-clover and Californian are small, and are quotable nominal at 9 to 9½ cents. Beeswax is in good demand at 29 for prime. Inferior and impure sells at less.

R. HARTMANN PRODUCE CO.

St. Louis, Mo., Oct. 4.

LIVERPOOL.—The market remains very slow at present, and we have had no fresh arrivals during the past fortnight. Sellers are not pressing for offers, and in the mean time there is not much inquiry. Quotations are as follows: Haitien, \$6.24 to \$7.92 per cwt.; Peruvian, \$5.76; Chilian, \$5.76 to \$8.16; Jamaican, \$6.00 to \$8.40; Californian, \$9.60 to \$11.16. The beeswax market is steady; but as consumers are full at present we have no business to report. We value Chilian at \$33.88 to \$39.92. Business has been doing in Gambia and Sierra Leone at last prices. Values are about as follows: Chilian, \$33.88 to \$39.92; African, \$32.64 to \$34.48; West Indies, \$31.44 to \$36.28.

Liverpool, Sept. 17.

A GENUINE SERVICE.

"I believe," says an old subscriber, "that every time The Youth's Companion enters a home it does that home a genuine service." That describes the purpose of the publishers exactly. The paper is not filled with mischievous or idle thoughts to fill an idle hour. It provides healthy pastime recreation that builds up. It is to the minds of eager and impressionable young people what sound athletics are to their bodies.

At a cost of less than four cents a week The Youth's Companion opens the door to a company of the most distinguished men and women in America and Europe. Whether they are revealing the latest discoveries in science, or describing great industrial achievements, or telling of their wanderings in strange corners of the world, or feeding the imagination with rare stories, they are giving Companion readers the best of themselves.

Seven serials at least will be published by The Companion in 1913, and nearly 200 other complete stories, in addition to some 50 special contributions, and a treasure-box of sketches, anecdotes, expert advice as to athletic sports, ideas for handy devices round the house, and so forth—long hours of companionship with the wise, the adventurous, and the entertaining. Announcement for 1913 will be sent with sample copies of the paper to any address on request.

Every new subscriber who sends \$2.25 for the fifty-two weekly issues of 1913 will receive as a gift The Companion Window Transparency and Calendar for 1913, the most exquisite novelty ever offered to Companion readers; also, all the issues of The Companion for the remaining weeks of 1912, free.

THE YOUTH'S COMPANION,
144 Berkeley St., Boston, Mass.

LEARN BEEKEEPING from the Beginning

"First Lessons in Beekeeping" and the . . . **\$1.00**
American Bee Journal, one year, Both for Only

"First Lessons in Beekeeping" is a 190-page book telling all that the beginner need know. . . . It has an attractive paper cover, and many illustrations.

"Doolittle's Scientific Queen-rearing," and the . . . **\$1.00**
American Bee Journal, one year, Both for Only

Doolittle's "Scientific Queen-rearing" book contains 126 pages, and is bound in leatherette with round corners. It tells in the clearest way possible just how the famous queen-breeder, Mr. G. M. Doolittle, rears the best of queen bees in perfect accord with Nature's way. As all know, Mr. Doolittle has spent some 40 years in rearing queens and producing honey. He has no superior as a queen-breeder. You can learn to rear fine queens by following his directions.

The beginner will want "First Lessons;" the older beekeeper should have "Scientific Queen-rearing." You will not regret it if you send your \$1.00 now and get either one of these books with the JOURNAL, as the JOURNAL itself is worth more than the total cost.

AMERICAN BEE JOURNAL, . . HAMILTON, ILLINOIS

"If goods are wanted quick, send to Pouder."

Please Consider This

I have a business proposition to make you which will be mutual and profitable. If you will place your orders for Bee Supplies early I can save money for you; and what I can save in this way I am more than glad to turn over to you, because it gives us employment during the dullest season and relieves us during the rush season, and there will be no complaints, no delays, and no disappointments, and you may as well save the money. In ordering Bee Supplies during October you may deduct six per cent. This discount will decline one per cent per month. You will readily understand the convenience of securing your supplies early, and then having the opportunity of assembling them at your convenience. To be available, the order must be accompanied with remittance. The goods offered are the Root quality, and I do not know of any displeased patrons; but I am fortunate in having hundreds of letters commending the goods and my method of handling the business.

Ladoga, Ind., Aug. 6, 1912.

Walter S. Pouder, Indianapolis, Ind.

This honey is the finest that I have ever received—even finer than your previous shipment. From experience in buying from different houses I have learned to come to you when I want the best in honey or bee supplies. I find that you give better goods and better service than any other house in the country.

GEORGE L. HAVENS.

South Barre, Vt., Aug. 24, 1912.

Walter S. Pouder, Indianapolis, Ind.

Your paper honey-jars are perfection for local trade.

GEORGE E. MORRIS.

If you are in need of more honey for your local demands I am prepared to supply you promptly with very finest quality.

If my catalog has been misplaced, write me and another will be sent.

Walter S. Pouder, Indianapolis, Ind.

859 Massachusetts Avenue

The books listed below ought to be of interest to every one who has a small patch of ground to cultivate or a wish to develop some-thing in this line. These books are all in stock, and orders can go out by first mail.

The A B C of Potato Culture

BY T. B. TERRY AND A. I. ROOT.

Mr. A. I. Root devoted a large part of his time during the summer of 1911 to revising the Potato Book which he wrote in collaboration with Mr. Terry 25 years ago. During the winter the 8th edition of 10,000 copies has been printed. Speaking of this valuable book, and of Mr. Terry, Mr. Root recently had to say:—"It will pay almost every man, woman, and child to read Terry's potato-book, no matter whether you ever did or ever will grow any potatoes or not. If you have read Terry's recent book, "How to Keep Well and Live Long," you will know that he is a student of nature, and a deliverer after God's gifts and God's secrets; and this potato-book, on every page, shows his remarkable gift. He is a philosopher of modern date; and his love for God's gifts, as well as his love for his fellow-men, shines out on every page. His studies of potatoes, it occurs to me, paved the way in his explorations in his later work in regard to how we should live, and keep our health." Contains nearly 400 pages, well illustrated, paper bound, 57c each postpaid. Cloth bound, 85c each, postpaid. (Deduct 7c if ordered sent with freight or express shipment.)

How to Keep Well and Live Long

BY T. B. TERRY.

I am still gaining. That is what T. B. Terry says to-day, when he is 67 years old, after being so broken in health at 40 years of age that all the doctors who saw him and tried to help him gave him up to die. But Mr. Terry got well by working out his own cure. He tells all about it in his great health book, *How to Keep Well and Live Long*.

There is no other book like it in the world. You don't need to know medical words or medicines to understand it. It is written clearly and simply and has back of it the personal experience which tried and proved every step of the way to a long and healthy life. You can follow the same way. The book is only one year old, but over 5150 copies of it to date are making men and women healthier and happier because they have read and followed the teachings of its pages.

Nearly a thousand copies of this helpful book have been distributed through the publishers of "GLEANINGS IN BEE CULTURE," and not a single reader has expressed regret at his bargain. Mr. A. I. Root heartily endorses Mr. Terry's writings on health subjects. Contains 220 pages, substantially bound in cloth; \$1.00 per copy postpaid.

The Dollar Hen

"Every few days the friends write me, asking what poultry-book they had better purchase—which one I would recommend above all others, etc. Well, to get right down to it there is no *best* poultry-book. There are many good ones, but no one book contains *all* that is good. The one that is most emphatic against humbugs and frauds, especially costly medicines for dosing chickens, etc., is the one I have frequently referred to, "The Dollar Hen," by Milo M. Hastings.

The Dollar Hen is a real book, substantially bound—not a paper-bound pamphlet of "System," "Secrets," or "Methods," but a book worth several dollars of any poultryman's money. "The Dollar Hen" is a vast fund of valuable information that required much time, expense, and effort. Contains more than 200 pages; price postpaid \$1.00 per copy.

A B C of Strawberry Culture

Fully illustrated, 235 pages: Price 45c; by mail, 5c extra; cloth, 68c; by mail, 75c. New edition, revised and enlarged. This is also one of Terry's and has received some very high words of praise. Who that keeps honeybees does not also have a little garden patch? If you would learn to raise in it that most luscious of all fruits, the strawberry, with the best results, you can not be without this little book. Even if you don't grow strawberries you will be the better for reading it.

Tomato Culture

In three parts. By J. W. Day, D. Cummins, and A. I. Root; a most valuable treatise, embracing field culture, forcing under glass, and raising plants for market. Valuable to any one raising garden stuff of any kind aside from tomatoes. 150 pages illustrated. Price 35c; by mail 40c.

Tile Drainage

By W. I. Chamberlain. This is a valuable companion to our other rural books. It embraces the experience of 40 years of one of our foremost practical agriculturists, who has laid with his own hands over 15 miles of tile. Price 35c; by mail, 40c.

Our Farming

By T. B. Terry. In which he tells "how we have made a run-down farm bring both profit and pleasure." This is a large book, 6x9 inches, 367 pages, quite fully illustrated. It is Terry's first large book; and while it touches on the topics treated in his smaller handbooks, it is sufficiently different so that no one will complain of repetition, even if he has read all of Terry's little books. We are so sure it will be worth many times its cost that we are not afraid to offer to take it back if any one feels he has not got his money's worth after he has read it. Price 75c; postage 10c. Same in paper covers, postpaid, 50c; by express or freight with other goods, 10c less.

What to Do, and How to be Happy while Doing It

The above book, by A. I. Root, is a compilation of papers published in *GLEANINGS IN BEE CULTURE*, in 1886, 1887, and 1888. The suggestions are principally about finding employment about your own homes. The book is mainly upon market-gardening, fruit culture, poultry-raising, etc. Price in paper covers, 50c; cloth, 75c. If ordered by freight or express, deduct 8 and 10c respectively.

Celery for Profit

The first really full and complete book on celery culture, at a moderate price, that we have had. It is full of pictures, and the whole thing is made so plain that a schoolboy ought to be able to grow paying crops at once without any assistance except from the book. 90 pages, paper bound. 27 cts. per copy postpaid.

Maple Sugar and the Sugar Bush

BY A. J. COOK.

Author of the *Beekeeper's Guide*. This practical book, written several years ago, remains the most popular treatise on procedure in the sugar-bush. Contains 40 pages size of this one—paper bound and illustrated. Price per copy, 28c postpaid.

A B C of Carp Culture

This is a work of 70 pages 7x10 written by Geo. Finley and A. I. Root, and the best authority on the subject of carp culture yet in print. The rearing of carp is a pleasant and profitable amusement. This book will tell you all about it. In paper covers. Price 25 cts.; by mail 5 cts. extra.

Winter Care of Horses and Cattle

This is T. B. Terry's second book in regard to farm matters; but it is so intimately connected with his potato book that it reads almost like a sequel to it. If you have only one horse or cow it will surely pay you to invest in this book. Forty-four pages; four illustrations. Price 25 cts.; by mail, 30 cts.

The A. I. Root Co., Medina, Ohio.

Early- Order Discounts

For years we have followed the example of the factory, and allowed our customers the benefit of the discounts offered by the Root Company for orders placed during the fall months for supplies for use the following season. This discount for October is six per cent for cash with orders, and diminishes one per cent per month as the season advances. We are sure many of our beekeeping friends will want to take advantage of this discount, not only because of the actual cash saving, but because of the convenience of getting goods before the rush of the busy season.

The Goods We Handle

We have said so much about the quality of Root's goods, and they are already so well known by beekeepers, that it hardly seems necessary even to mention the fact, except to remind you that we carry always a full and complete stock of Root's goods only. If you have tried others and they haven't given just the satisfaction they should, send us a trial order this season. For quality of material and accuracy of workmanship you will find them unexcelled.

Our Service

Each season we aim to make some improvement in the service we can give our customers. We aim to keep our stocks always complete, and to allow no order, large or small, to drag through our establishment. The shipping facilities at our command enable us to get goods started to you by direct routes at once. Whether your order is large or small it will have the most careful attention at our hands from the time it reaches us until the goods are in your hands.

Full information on any point regarding beekeeping in the Southwest cheerfully given on request.

Toepperwein & Mayfield

Corner Nolan and Cherry Streets
San Antonio, Texas

A Business Proposition.

Your money in the savings bank is drawing 3 per cent, or at most 4 per cent interest. Here is an opportunity to invest it at 12 per cent—8 per cent more than it is now earning.

In most localities this has been a good season for honey and for making increase. Prospects were never better than for the coming season, and you are almost certain to be needing supplies in the spring. If you wait until the first of April or later, you must pay full catalog prices. If your order and remittance are sent in during October, a discount of 6 per cent will be allowed. Six per cent on money invested for six months is equivalent to 12 per cent per annum, figured for six months' time. It looks good, doesn't it? Why not effect this saving by ordering now, and thus also secure the peace of mind that will result from having your supplies all ready when you need them most? Your order can be sent in now, and the goods will be shipped at any time to suit your convenience.

Best goods, best service, best treatment, are insured by sending your orders to OHIO'S BEE-SUPPLY CENTER—special headquarters for bee-keepers in Ohio, West Virginia, and Western Pennsylvania. If you haven't a catalog, ask for it.

PUBLICATIONS ON

BEE CULTURE

Please use coupon below, checking the numbers of items wanted.

The pamphlets and booklets listed below are of more than ordinary interest:

- 1 **My First Season's Experience with the Honey-bee.** By the "Spectator," of the *Outlook*, of New York. A ten-page leaflet detailing the experiences of this well-known writer. You will read the leaflet through before you lay it down. Free.
- 2 **The Bee-keeper and Fruit-grower.** A 15-page booklet, giving actual facts regarding the value of bees to fruit, and showing how bee-keeping may be doubly profitable to the fruit-grower. Fruit-growers are realizing as never before the necessity of having honey-bees in close proximity to their blossoming fruit. Free.
- 3 **Bee-keeping for Sedentary Folk.** A 24-page leaflet reciting the actual experiences of an amateur bee-keeper, showing what equipment is best, points derived, etc. Free.
- 4 **Catalog of Bee-keepers' Supplies.** Our complete catalog will be mailed free to any address on request.
- 8 **Habits of the Honey-bee.** By Dr. E. F. Phillips. A somewhat scientific handling of the habits and anatomy of the bee. Price 10 cts.
- 9 **How to Keep Bees.** A book of 228 pages detailing in a most interesting manner the experience of a beginner in such a way as to help other beginners. Price \$1.00 postpaid.
- 10 **The A B C of Bee Culture.** A complete encyclopaedia of bees, of 576 pages, fully illustrated, \$1.50 postpaid; half leather, \$2.
- 11 **Gleanings in Bee Culture.** A 64-page illustrated semi-monthly magazine, the leading exponent of bee culture in this country. Ten cents per issue, but to new subscribers we will furnish it six months for 25 cts.
- 12 **Back-yard Bee-keeping.** Six interesting lessons written in readable newspaper style. Many facts to encourage the "City Bound" man or woman with the back-to-the-land longing. Free.
- 15 **Truth About Sweet Clover.** Interesting booklet of nearly 100 pages. Tells of value of sweet clover for honey, for plowing under, as fertilizers of the soil, and food for horses, cattle, swine, sheep, etc. Free.

The coupon below may be used as an order sheet by properly checking the numbers of items wanted and adding your signature, and remittance, if required.

We will mail you a copy of

THE COUNTRY GENTLEMAN

(The Oldest Agricultural Journal in the World)

every week from now until February 1st, 1913, for 25 cents--half price

THE oldest agricultural journal in the world changed hands a year ago. It had been issued for 80 years; yet in this last year 60,000 more farmers than ever before have begun to buy it. We offer it to you on trial four months for 25 cents--half price. THE COUNTRY GENTLEMAN is a NATIONAL weekly devoted to agriculture as a great BUSINESS INDUSTRY. It is the answer to a demand. In England "the country gentleman" is a man of means, with estates cultivated by others. It is the "country gentleman" is the BUSINESS FARMER. Here the efficient owners of farms do not differ socially or intellectually from the heads of factories or commercial houses. They are business men.

To help our readers solve scores of problems, both national and local, we spare no expense. We get and print up-to-the-minute and down-to-the-ground information and advice. Our experts are men in the field, the dairy, the orchard. They write sound common sense, and they write it clearly. To give you their practical experience we spend \$75,000 a year. We believe you want the benefit of all this. You can try it for 17 weeks for only 25 cents. This is solely a TRIAL offer--it will never be repeated.

Three Regular Weekly Departments, Alone Worth the Subscription Price

Women's Cares. Comforts, Clothes, and Cooking

Our departments for women appeal directly to the woman in the country. They include four regular features, all ably written: (1) Practical Talks by a country woman of experience on problems of the hired man and hired girl, training of children, pin-money, etc. (*The Country Gentlewoman*); (2) Foods and Cooking, country dishes, pleasing new recipes from East and West--preserving and canning; (3) The Rural Home--its furnishings and decorations; (4) Sewing--how to make clothes stylish yet practical--embroidery, laces, and knitting ideas.

How are Crops, and What are They Worth?

What crop to grow? When to sell it? These questions determine profits on most farms. THE COUNTRY GENTLEMAN employs a national expert on crop reports to write a weekly department on *The Crops and the Markets*, giving the changes in prices and the market demands. Also there are special articles telling how to put each crop on the market in prime condition so as to get the maximum price. No farmer who reads this department regularly, and supplements it with a local newspaper, can be ignorant of when and how to market his crop to get the greatest returns.

What is Your Congressman Doing?

The Presidential campaign, the State campaigns, involve to-day many issues of direct personal importance to farmers. You want a way to follow easily and accurately what the politicians are doing. That is what the *Weekly Congressional Calendar* in THE COUNTRY GENTLEMAN is for. It does it successfully, always with an eye for the agricultural interests. By it you can check up the votes of your own representatives in congress and legislature on things that mean dollars and cents to you.

Here are Three Important Special Series that Will Appear During These Four Months

Wiped Out by Fire

In New York State alone there were 5800 farm fires last year. They caused a loss of \$1,500,000. Most of them could have been prevented. Lightning caused 1800—many of these were preventable. We shall print a series of articles on fire prevention and protection covering (1) What farm fire losses represent and how they threaten the average farmer; (2) How to guard against fire; (3) How to put it out if it starts—up-to-date home fire-fighting apparatus; (4) The best kinds of insurance on buildings, crops, and livestock impartially compared; (5) Actual facts about farmers' mutual insurance companies that have *worked*. These articles will show you in a practical way how to strengthen your protection against the possible loss of your property or profits.

Good Marketing by Advertising

Six years ago a farm hand in a Western State rented some land and grew a crop of fine seed grain. Last year he sold over \$15,000 worth of pure-bred seed grains, and is known as one of the seed experts of the world. Judicious advertising did it.

A student in a leading agricultural college heard a lecture on advertising. He went home and prepared some small ads. for produce. In six weeks he sold for nearly \$1000 goods which might otherwise have brought less than \$400. The methods of these men and a dozen others will be told in our series on "Farm Advertising." It covers advertising of pure-bred livestock, seed grains, produce, dairy products and fruit. Several stockmen of national standing will contribute. All details explained.

What is Your Money Crop ?

If your farm were big enough, and the soil, climate, and market conditions varied enough for 30 crops, you would like to have 30 experts—one for each. But the cost would be too great. Most successful farming communities center attention upon a single crop adapted to the locality. To diversify or combine crops offers greater returns from year to year, but it is necessary to have one crop that you may promptly convert into cash to meet running expenses.

We are printing a series on "The Money Crop." The articles will be written by 30 experts—on wheat, corn, tobacco, cotton, hay, potatoes, pork, beef, milk, wool, and so forth. Each article will show the essentials in business management, soil, climate, and the returns which may be expected. They will include personal experiences.

Besides these we have frequent practical articles on poultry, livestock, the dairy, farm machinery, road building, the rural school, the church, the grange, farmers' clubs and other aspects of country community life; co-operative marketing; building and furnishing the house; a regular department on the scientific advance of agriculture and new inventions; wholesome fiction of country life, stories and verse; a letter-box and a strong editorial page that stands always for the interests of the farmer.

OFFER

Sixty thousand more farmers than a year ago are already buying THE COUNTRY GENTLEMAN at 5 cents a copy, or \$1.50 a year, the regular price. If you knew THE COUNTRY GENTLEMAN as they do you would be glad to pay that amount and more for your subscription.

You know our other publications, THE LADIES' HOME JOURNAL and THE SATURDAY EVENING POST. We want you to know THE COUNTRY GENTLEMAN. The Curtis Publishing Company never gives premiums, bonuses or clubbing offers. But it is GOOD BUSINESS for us to get THE COUNTRY GENTLEMAN into your hands. You will judge for yourself. In order to give you a fair chance to see with your own eyes that it is everything we claim, we will send it to your home until February 1, 1913, for 25 cents. This one-half reduction in price is solely a trial offer for new subscribers. IT WILL NEVER BE REPEATED. Fill in and send the coupon opposite (or, if you wish to save the paper in which this is printed, write us a letter, giving clearly your name and address, enclosing 25 cents).

The Curtis Publishing Company, Philadelphia, Pa.

Bills in Half

APPLE GROWING

The healthier the tree, the better the fruit. The longer trees are sprayed with "SCALECIDE" the more beautiful, healthful and fruitful they become. "SCALECIDE" is the acknowledged leader of all soluble oils—the only one containing distinct fungicidal properties. "SCALECIDE" will positively kill all soft-bodied sucking insects without injury to the tree. Let us prove these statements. Send today for free booklet "SCALECIDE—the Tree Saver." Address B. G. PRATT CO., Mig. Chemists, 50 Church St., N. Y. City.

Dept. 6.

20 Reasons Why You Should Investigate the **SANDOW** Kerosene Stationary ENGINE

It runs on kerosene (coal oil), gasoline, alcohol or distillate without change of equipment—starts without cranking—runs in either direction—throttle governed—hopper cooled—speed controlled while running—no cams—no valves—no gears—no sprockets—only three moving parts—portable—light weight—great power—starts easily at 40 degrees below zero—complete, ready to run—children operate them—5-year ironclad guarantee—15-day money-back trial. Sizes 2 to 20 horsepower.

Send a postal today for free catalog, which shows how Sandow will be useful to you. Our special advertising proposition saves you one-half cost of first engine sold in your county.

Detroit Motor Car Supply Co.
72 Canton Ave., Detroit, Mich.

HOW TO GET BETTER LIGHT FROM KEROSENE (Coal Oil)

Tests by Prof. Rogers, Lewis Institute, Chicago, on leading oil-burning lamps show the Aladdin Mantle lamp is the most economical and gives over twice as much light as the Rayo and other lamps tested. It is odorless, safe, clean, noiseless. Guaranteed. Better light than gas or electric. To introduce the Aladdin we'll send a sample lamp on.

AGENTS WANTED

Experience unnecessary. Every home needs this lamp. One agent sold over 1000 on money back guarantee, not one returned. Another sold \$800 worth in 15 days. Evenings made profitable. Ask for agents prices and trial offer.

Clover honey of finest quality, in new 60-lb. cans at 9 cts. per lb. J. P. MOORE, Morgan, Ky.

Fancy Michigan extracted honey in quantity and packages to suit. A. G. WOODMAN Co., Grand Rapids, Mich.

FOR SALE.—White-clover and basswood comb and extracted honey; has a good flavor. D. H. WELCH, Racine, Wis.

FOR SALE.—Extracted alfalfa honey, in any quantity. Prices on request. WASHINGTON HONEY-PRODUCERS' ASSOCIATION, Sunnyside, Wash.

FOR SALE.—Finest quality new clover honey in 60-lb. tin cans. O. J. BALDRIDGE, Homestead Farm, Kendaia, N. Y.

Very fine quality of raspberry-milkweed honey in new 60-lb. cans at 9 cts. P. W. SOWINSKI, Bellaire, Mich.

FOR SALE.—New buckwheat extracted honey in 60-lb. and 200-lb. kegs. B. B. COGGSHALL, Rt. 12, Groton, N. Y.

Bronzed Honey Labels, 250, 50 cts.; 500, 80 cts.; 1000, \$1.10, postpaid. Send 2 cts. for samples. PEARL CARD CO., Clintonville, Ct.

FOR SALE.—Fine quality clover honey at 9 cts. in 60-lb. cans; also amber fall honey, good flavor and body, at 8 cts. in 60-lb. cans, two cases; sample, 8 cts. EDW. A. REDDOUT, Box 43, Lysander, N. Y.

Comb honey capped white in shallow frames, 12½ cts. per lb., f. o. b. here crated. Extracted amber in 60-lb. cans, \$6.00. Sample, 5 cts. JOHN W. CASH, Bogart, Ga.

FOR SALE.—Two carloads of choice sage honey by the can or case. Samples of honey and desirable California souvenir free for a stamp. C. W. DAYTON, Chatsworth, Cal.

Our fall crop of comb honey at \$3 per case of 24 sections, well filled, six cases to carrier; extracted, 8 cts. to 9 cts.; two sixty-pound cans to case. QUIRIN-THE-QUEEN-BREEDER, Bellevue, Ohio.

FOR SALE.—22 tons of honey, finest quality; raspberry, and a blend of raspberry and milkweed, raspberry and basswood, in new 60-lb. cans, two in case, at 9 cts.; whole lot 8½ cts. J. N. HARRIS, Mancelona, Mich.

FOR SALE.—White-clover and basswood extracted honey, blended in the extractor; put up in brand-new 60-lb. cans, 2 cans per case, at \$12 per case of 2 cans or more, F. O. B. Flint. Cash with order. This honey is the finest I have ever produced. L. S. GRIGGS, 711 Avon St., Flint, Mich.

Fine white and light amber alfalfa honey put up in any size of tin package, any quantity. DADANT & SONS, Hamilton, Ills.

RASPBERRY HONEY.—Our crop of raspberry honey this season is very fine—the best in quality I ever saw. It was left on the hives until it was all sealed, and thoroughly ripened by the bees. Thick, rich, and delicious. It is put up in new 60-lb. tin cans. Price \$6.00 per can. Large-sized sample by mail, 10 cts. Said 10 cts. may be deducted from any order sent for honey.

ELMER HUTCHINSON, Pioneer, Mich.

HONEY AND WAX WANTED

WANTED.—Honey, good extracted. Quote, with sample. J. C. BULL, Hammond, Ind.

WANTED.—A minimum car of white or light amber extracted honey. J. W. GRIFFIN, Oenaville, Texas.

WANTED.—Comb, extracted honey, and beeswax. R. A. BURNETT & Co., 173 S. Water St., Chicago.

WANTED.—No. 1 white-clover comb honey. Give quantity, description, and price wanted. Will pay cash or exchange bee-supplies. E. W. PEIRCE, Zanesville, Ohio.

WANTED.—Honey wholesale. Would like to hear from those having comb honey in car lots to market. Heretofore we have at times sustained the market by buying heavily and holding, on one occasion carrying some 40 carloads three months. If you need us let us hear from you with particulars. THOS. J. STANLEY, Manzanola, Otero Co., Col.

WANTED.—Car of light-medium or dark-amber extracted honey in cases of two five-gallon cans. We prefer the light amber to the dark, but can use quite a quantity of either grade provided the flavor is mild. Our trade does not want a pronounced-flavored honey. Submit a two or four ounce sample and quote your best prices delivered to your railroad station.

THE A. I. ROOT CO., Medina, Ohio.

FOR SALE

A full line of Root's goods at Root's prices. A. L. HEALY, Mayaguez, Porto Rico.

FOR SALE.—Root or Falconer bee supplies. Free catalog. Save freight. G. F. STANTON, Buckingham, Fla.

FOR SALE.—Empty second-hand cans, two cans to the case, good as new; 25 cents per case. C. H. W. WEBER & Co., Cincinnati, O.

For sale or exchange for income-bearing property, our entire business, 1500 colonies of bees and fixtures. Reason for selling, poor health. OGDEN BEE AND HONEY CO., Ogden, Utah.

FOR SALE.—A full line of beekeepers' supplies; also Italian bees and honey a specialty. Write for catalog and particulars. THE PENN CO., (Successor to J. M. Jenkins.) Penn, Miss.

New crop white-sweet-clover seed, 4 lbs. by mail, prepaid, \$1.12; 50 to 100 lbs., 15 c. per lb., hulled; unhulled, 3c. less. Alfalfa seed, same price. R. L. SNODGRASS, Rt. 4, Augusta, Kan.

SEED WHEAT.—Improved Poole seed wheat—one of the highest yielders at the Ohio Experiment Station, where this seed originated. Guaranteed free from all foul seeds. Recleaned ready for drilling. Write for prices. L. H. RANDALL, Medina, O.

BEES AND QUEENS

FOR SALE.—25 colonies bees, fixtures, bee magazines. REV. EDWIN EWELL, Litchfield, Mich.

Our queens will please you. Price \$1.00 each. C. W. PHELPS & SON, Binghamton, N. Y.

Choice warranted golden Italians ready, \$1.00. J. B. CASE, Port Orange, Fla.

FOR SALE.—200 colonies bees. J. O. BAIRD, New Plymouth, Idaho.

Hartford, Ct.

JAS. A. SMITH, Sec.

SPECIAL NOTICES

BY OUR BUSINESS MANAGER

UNTESTED QUEENS.

One of our breeders reports that he will be able to supply us about a hundred fine queens this week. These are raised from our choicest stock and we will waive the usual October price and fill orders for these at \$1 each, \$10 for twelve, \$22.50 for twenty-five, while the present stock lasts. This will wind up our queen-rearing operations for this season, but offers an exceptionally good chance to get some fine stock to winter. No orders filled at these prices when these hundred queens are gone.

HONEY-TUMBLERS TO RETAIL AT 10 CENTS, FILLED WITH HONEY.

We buy tumblers by the carload for packing honey for the retailers to sell at 10 cents each. Those we use hold about 7 ounces of honey, and have our label lithographed on the cap. The tumblers as they come through the factory vary somewhat in size, and in selecting them there will be some a trifle too large or too small to fit our lithographed caps. These are fitted with plain tin caps made a little larger or smaller as the case may be, and packed in barrels of 40 dozen each. We offer these for sale at a special price of \$6.00 per barrel, which is only 15 cts. per dozen. We can ship either from Medina or Clarksburg, W. Va. Five-barrel lots at \$5.50.

NEW POUND SCREW-TOP JAR.

The factory which has been supplying our No. 25 jar for years has discontinued making them, so that, when present stocks are exhausted, we shall not continue furnishing the same jar except on special order from another factory which also makes them. We are arranging for another style half an inch taller and one-fourth inch smaller in diameter than the No. 25, a more desirable shape, with lacquered tin top and wax-paper liner. These, put up in reshipping-cans of two dozen each, will sell for 85 cts. a box; \$4.80 for 6 boxes. Ten-gross lots, or 60 boxes, at 75 cts. per box. The same jar, packed a gross in a crate, will sell for 50 cts. a gross less. The glass is clear, and ought to have a large sale at these prices.

SWEET-CLOVER SEED.

We now have a good supply of new seed, all of which so far has come to us with the hulls on. As we go to press we are arranging to put it through a clover-huller so that we can furnish the seed hulled, the form in which most people prefer it. Our prices on new seed will be as follows:

PRICE LIST OF SWEET-CLOVER SEED.

Hulled white biennial (*Melilotus alba*), 1 lb., 22c.; 10 lbs., \$2.00; 25 lbs., \$4.75; 100 lbs., \$18.00.

Unhulled white ditto, 1 lb., 17c.; 10 lbs., \$1.50; 25 lbs., \$3.50; 100 lbs., \$13.00.

Hulled yellow biennial (*Melilotus officinalis*), 1 lb., 26c.; 10 lbs., \$2.40; 25 lbs., \$5.75; 100 lbs., \$22.00.

Unhulled yellow ditto, 1 lb., 21c.; 10 lbs., \$1.90; 25 lbs., \$4.50; 100 lbs., \$17.00.

Hulled yellow annual (*Melilotus Indica*), 1 lb., 14c.; 10 lbs., \$1.20; 25 lbs., \$2.75; 100 lbs., \$10.00.

Our seed has been tested for purity and germination by the U. S. Department of Agriculture testing station, and averages over 96 per cent for purity.

SECOND-HAND FOUNDATION-MILLS.

We have to offer the following list of foundation machines which have been used, but are in fair condition. In many cases they will answer as well as a new machine where you have only a moderate output. Send for samples of any mill in the list which may interest you.

No. 0121, 2½x10-inch heavy hex. brood mill. An old-style Dunham machine without cam adjustment; in rather poor condition. Price \$8.00.

No. 0139, 2½x6 hexagonal thin-super mill, in very good condition. Price \$14.00.

No. 0140, 2½x6 hexagonal thin-super mill, in very good condition. Price \$14.00.

No. 0142, 2½x6 hexagonal thin-super mill in fair shape. Price \$10.00.

No. 0151, 2½x6 hexagonal cell extra thin-super mill, one bad cell, otherwise in good condition. Price \$12.00.

No. 0152, 2½x6 hexagonal thin-super mill, extra good for regular-width super foundation. Price \$12.00.

No. 0153, 2½x6 hexagonal thin-super mill, in very good condition. Price \$14.00.

No. 0154, 2½x6 hexagonal thin-super mill, in very good condition. Price \$14.00.

No. 0156, 2½x6 extra thin-super mill, fair. Price \$10.00.

No. 0157, 2½x6 thin-super mill, in good condition. Price \$12.00.

No. 0160, 2½x6 hexagonal thin-super mill in good condition. Price \$12.00.

No. 0164, 2½x6 hexagonal thin-super mill in fair condition. Price \$10.00.

No. 0165, 2½x6 hexagonal extra-thin super mill in fair condition. Price \$11.00.

No. 0166, 2½x6 hexagonal thin-super mill in extra good condition. Price \$14.00.

No. 0167, 2½x6 hexagonal extra-thin super mill in fair condition. Price \$11.00.

No. 0168, 2½x6 hexagonal thin-super mill in good condition. Price \$12.00.

No. 0176, 2½x6 extra thin-super mill in fair condition. Price \$12.00.

No. 0180, 2½x6 hexagonal thin-super mill, in fair condition. Price \$10.00.

No. 0181, 2½x10 hexagonal medium-brood mill, in very good condition. Price \$18.00.

No. 0182, 2½x12 round-cell medium-brood mill, in good condition. Price \$20.00.

No. 0183, 2½x6 hexagonal thin-super mill, very good condition. Price \$14.00.

No. 0184, 2½x10 hexagonal light-brood mill, in very good condition. Price \$18.00.

No. 0185, 2½x10 hexagonal medium-brood mill, in very good condition. Price \$18.00.

No. 0187, 2x10 round-cell medium-brood mill, old-style frame, in good condition. Price \$14.00.

SPECIAL NOTICES

A. I. ROOT

SEED CORN THAT IS NOT ONLY "HOMESICK"
BUT HAS "HEART DISEASE" AS WELL.

In Special Notices for October 1 I suggested that each farmer should grow his own seed corn, to avoid swindles such as our friend mentioned. He has just replied further as follows:

Mr. Root:—The corn was not only "homesick" but it had "heart disease."
Tuscola, Ill., Oct. 5.

JOHN HUNT.

Now I want to say just a word further. So far as possible do not depend on anybody for your seed corn. Grow it yourself if you are going to be up with the times and up to date; and not only that, but test every single ear, and make this test only a little while before planting-time, so you will know you have done your part in furnishing seed that is all right in every respect. "Whatsoever a man soweth, that shall he also reap." The very cornerstone and groundwork of good corn is *good seed*; and we might say the same with every thing else that a farmer grows; and be particularly sure that your seed corn does *not* have "heart disease."

FLORIDA LAND SPECULATIONS, ETC.

In our issue for June 1, page 356, A. W. Foreman criticised us severely for accepting advertisements from the Seaboard Airline Railway Co. On page 422, July 1, that company replies; but friend Foreman is not quite satisfied to have the matter dropped there. Below is his protest, somewhat abbreviated.

I want right here to confess that my language was somewhat intemperate, and I beg your pardon for it, and promise not to do so any more. But I do not retract the general charge that the character of the advertisement is highly objectionable.

Let me illustrate. I at one time under special conditions, and with a special kind of wheat, produced on our farm near this city fifty bushels of No. 2 wheat per acre. Suppose I were a real-estate agent, and should advertise that Illinois soil produces fifty bushels of wheat per acre. That would not be a lie by direct statement, but it would be a base lie by implication, because the average yield of wheat in Illinois is only a fourth that.

Now you must know that I have in the above sketched the usual character of real-estate advertising, as practiced by a large per cent of real-estate agents. I hope I have made myself plain, and that there can be no mistake about my meaning.

Let me say in conclusion that I still have faith in the good intentions of GLEANINGS, and hope that this little scrap will be instrumental in a small degree, at least, in moral uplift.

White Hall, Ill., Sept. 25.

A. W. FOREMAN.

I can only add that I have looked over the Seaboard Airline advertisement once more, but can not agree that it should be rejected. It is well known that railways, especially those running to new localities, are anxious to have settlers move in; and,

although they may not say so, it is generally understood that their advertisements refer to the *possibilities* rather than to the general run of results obtained where settlers are urged to go.

CRITICISING HASTILY WITHOUT LOOKING INTO THE CAUSE.

Your experience with the crabbed porter reminds me of an experience of my own. I got on a Pennsylvania train between Cincinnati and Pittsburg to go to New York. As evening approached I noticed how crabbed and uncivil the porter was, and asked, in the slang of the day, "Jim, what's chawing you? Can't you speak civil?" He then told me that he had had nothing to eat that day. There was some sort of meeting in the East, and to meet this travel the company had been concentrating cars at Cincinnati, St. Louis, and other gateways, and he had been at Cincinnati until he ran out of money. As his car was "dead" on a storage track he got no tips. I "staked" him, and after we passed an eating-station his disposition materially improved. Get at the "cause" and you can sometimes remove the "effect." A scolding or "cussing out" would not have made that porter pleasant.

Newport, Ark., Oct. 1. A. M. VAN AUKEN.

The above incident brings to mind a little stanza that I learned over forty years ago. I was studying shorthand, and I worked so long in deciphering the words, written in shorthand, that it fixed itself in my memory.

Think gently of the erring;

You may not know the power

With which the dark temptation came

In some unguarded hour.

The Savings Deposit Bank (Medina, O.)

says:

BANKING BY MAIL A SIGN OF MODERN PROGRESS.

In the old days, when there were no steam roads, no daily or even weekly mails, the greatest hindrance to progress was the inability to communicate readily with other parts of the world.

The tradesman or manufacturer in one community, though his wares might be of ever so high a quality, could not dispose of them to any appreciable extent outside of his own village, town, or city.

As soon as transportation facilities became more efficient, commercial advancement was marked. Today the manufacturer of Maine sells his goods and delivers them with comparative ease to the merchant or consumer in the distant cities of California.

Just as the United States mails have brought together the producers and consumers in all lines of business, so the mails nowadays enable banks to serve not only people in their own communities but also depositors throughout the country.

Banking by mail is a prominent feature in the service rendered by the Savings Deposit Bank Company of Medina. That institution protects the funds of people in nearly every State of the Union.

These depositors who forward their funds to the bank by mail find that banking by mail is not only safe but also particularly convenient. When they forward their deposits through the mails the money is protected by the United States Government until it reaches the bank; and this plan makes it unnecessary for them to go personally to a bank to make their deposits, for they can simply enclose the money in the form of checks, drafts, or post-office money orders in an envelope, and mail it, or they can send the currency in a registered letter. Mr. E. R. Root, of the A. I. Root Company, is Vice-President of The Savings Deposit Bank Company of Medina, Ohio, which has been particularly successful in serving people throughout the United States by this banking-by-mail plan.

If I Bought a Car

By R. E. Olds, Designer

Here are some things I'd require if I bought a car. I've learned their need by building 60,000 cars.

I could save, I judge, \$200 per car by building Reo the Fifth without them. But you might lose three times that by the lack.

Economy

I would want economy of upkeep. That would mean big tires.

My cars have always been over-tired, according to usual standards. But on Oct. 1st I added 22 per cent to the tire size on Reo the Fifth. Now the tires are 34x4.

Tire makers say that 22 per cent will add 65 per cent to the average tire mileage.

To further save on tires and fuel I would want a light, strong car.

That means drop forgings, costing twice what castings cost. *In Reo the Fifth I use 190.*

And I add considerable cost to the body to save another 50 pounds.

Safety

I would look out for safety, above all else, in any car I bought.

In Reo the Fifth I use Chrome Nickel Steel, Vanadium Steel and Manganese Steel. Then each lot of steel is analyzed twice to make sure of the needed strength.

I insist on big margins of safety. Every driving part in Reo the Fifth is made sufficient for a 45-horsepower car.

I use 14-inch brake drums for quick, sure control.

Durability

In a car of my own, bought for many years' use, I would look for immense durability.

Roller bearings cost *five times as much* as the usual ball bearings. But they save many times their cost.

In Reo the Fifth I use 15 roller bearings—11 of them Timken, 4 Hyatt High Duty.

I use a machine for testing my springs, and I require them to stand 100,000 vibrations.

I test my gears in a crushing machine, to prove that each tooth will stand 75,000 pounds.

Each engine is tested 20 hours on blocks, and 28 hours in the chassis.

I spend about \$10 extra for a centrifugal water-pump, over the cost of syphon.

The various parts of this car get a thousand inspections, so errors and weaknesses can't creep in. My 190 drop forgings do away with the hidden flaws often found in steel castings.

I limit my output to 50 cars daily, so the men are never rushed.

Such cars don't wear out.

Comfort

I would never buy a car which skimped on comfort, for the pleasure of motoring depends on it.

For comfort in driving I doubly beat my carburetor. That saves the troubles with low-grade gasoline. I use a \$75 magneto to save ignition troubles. In Reo the Fifth you can start on magneto.

I use a new type of center control, so all the gear shifting is done by moving a lever only three inches in each of four directions. You would not go without it for \$100 after you try it out.

Both brakes are operated by foot pedals, so no levers are in the way of the driver. And the driver sits on the left hand side, close to the cars he passes.

For comfort in riding I use big springs—seven-leaf springs, two inches wide, with rear springs 46 inches long. They are Sheldon springs.

I give a long, wide car, with ample room. I give them deep cushions, built so they never sag.

I use genuine leather in upholstering and fill it with the best curled hair.

Finish

Then I want for my own use a beautiful car. So I build this car with an impressive body, and finish it with 17 coats. I use electric side lights, and build them flush with the dash.

I give to every detail that final touch which adds to one's pride in a car. I abominate petty economies.

Men's Faith in Me

After 25 years, the best I have gained is men's faith in the cars I build. And my chiefest aim is to justify that faith.

I could easily save \$200 per car by skimping on things which buyers don't see. That slighted car at a startling price would pay me more profit than Reo the Fifth. And, by talking equipment—the things one sees—I could sell more cars beyond any

doubt, than by dealing with hidden worth.

But my ambition doesn't lead that way. I would never buy a car which the makers skimped, and I never shall try to sell one.

Enough men will always want well-built cars—generous, roomy, economical, safe—to keep this factory busy. And those men will always say good words about my engineering.

Only **4** Cents
A Week

Something new every week, something inspiring every week, something to read aloud and talk over every week, something good to treasure up in the memory every week.

Seven Stunning Serials and 250 Other Stories

The titles below indicate that this is one of the strongest groups of serials ever offered to Companion readers:

THE SHOVEL-MAN, A Tale of the Panama Canal,
ON MISERY COVE, A Story of the Maine Logging-Camps,
THE WILDERNESS CASTAWAYS, A Tale of Hudson Bay,
SARAH BREWSTER'S RELATIVES, A Home Story,
THE COLONEL'S EXPERIMENT, A Story for Girls,
THE VISION, A Tale of Chicago Business Life,
HIS FATHER'S SON, A Story of "St. Timothy's,"

RALPH D. PAINE
HOLMAN F. DAY
DILLON WALLACE
ELIA W. PEATTIE
EDITH BARNARD DELANO
GARDNER HUNTING
ARTHUR STANWOOD PIER

The best expert advice on baseball, football, and other great games and sports—sprinting, hockey, fancy skating. A department for girls suggesting profitable occupations, hints for dress, etc. For the family, recipes for dainty dishes, household devices, etc.

SEND A POSTAL FOR THE FULL ANNOUNCEMENT FOR 1913.

HOW TO GET THE FREE ISSUES

Every new subscriber who at once cuts out and sends this coupon (or mentions this publication) with \$2.00 for the 52 issues of The Companion for 1913 will receive

1. All the issues for the remaining weeks of 1912 FREE, including the beautiful Thanksgiving and Christmas Numbers.
2. The Companion Window Transparency and Calendar for 1913 FREE—the most exquisite novelty ever given to Companion readers.
3. Then The Companion every week until January, 1914—long hours of companionship with the wise, the adventurous, the inspiring—all for less than 4 cents a week.

Cleanings in Bee Culture

VOL. XL. NOV. 1, 1912 NO. 21.

HONEY LABELS

There is nothing that adds more to the attractiveness of a honey package than a neat label carefully worded and of the proper style. The guarantee of purity by the producer put on every package he offers for sale is the best protection he can get from the stories of adulteration that injure the sale of his product.

For glass packages a small label is generally preferred, while for tin, one that laps around the package is considered best. We supply both gummed and ungummed labels. We recommend the ungummed, however, for they adhere more readily when pasted on a package, and are not affected by changes in the atmosphere as are the gummed.

We give on the opposite page a few illustrations of some of our stock patterns. These are printed, some of them in two or more colors, some in bronze on glazed paper, and some in black on glazed paper. To get a very adequate idea of these you ought to see samples printed on regular label stock in the proper colors. We have a catalog which shows just what we can furnish in this line, and we shall be glad to send it on request.

Just now we can give very prompt attention to orders for this label work. We can furnish special labels too if you tell us what you want. Of course the price is higher than for our regular patterns; but if you are buying them in very large quantities you may want something to suit your individual tastes. Let us do your label work for you, for we can guarantee satisfaction.

The A. I. Root Co., Medina, O.

No. 90.—Bronze on glazed paper, same price as No. 89.

Wording on all labels changed to suit. Labels trimmed to margin. Above prices are on ungummed stock.

No. 94.—Bronze on glazed paper, 250, 90c.; 500, \$1.50; 1000, \$2.00; 2000, \$3.50.

No. 91.—Bronze on glazed paper, 250, \$1.00; 500, \$1.50; 1000, \$2.25; 2000, \$4.00.

HONEY MARKETS

The prices listed below are intended to represent, as nearly as possible, the average market prices at which honey and beeswax are selling at the time of the report in the city mentioned. Unless otherwise stated, this is the price at which sales are being made by commission merchants or by producers direct to the retail merchants. When sales are made by commission merchants the usual commission (from five to ten per cent), cartage, and freight will be deducted; and in addition there is often a charge for storing by the commission merchant. When sales are made by the producer direct to the retailer, commission and storage and other charges are eliminated. Sales made to wholesale houses are usually about ten per cent less than those to retail merchants.

EASTERN GRADING RULES FOR COMB HONEY.

FANCY.—All sections well filled, combs straight, firmly attached to all four sides, the combs unsoiled by travel-stain or otherwise, all the cells sealed except an occasional one, the outside surface of the wood well scraped of propolis.

No. 1.—All sections well filled except the row of cells next to the wood; combs straight; one-eighth part of the comb surface soiled, or the entire surface slightly soiled; the outside surface of the wood well scraped of propolis.

No. 1.—All sections well filled except the row of cells next to the wood; combs straight; one-eighth part of the comb surface soiled, or the entire surface slightly soiled.

No. 2.—Three-fourths of the total surface must be filled and sealed.

No. 3.—Must weigh at least half as much as a full-weight section.

In addition to this the honey is to be classified according to color, using the terms white, amber, and dark; that is, there will be "Fancy white," "No. 1 dark," etc.

NEW HONEY-GRADING RULES ADOPTED BY THE COLORADO STATE BEEKEEPERS' ASSOCIATION, DECEMBER 13, 1911.

FANCY WHITE.—Sections to be well filled, comb firmly attached on all sides and evenly capped, except the outside row next to the wood. Honey, combs, and cappings white, and not projecting beyond the wood. Wood to be well cleaned; no section in this grade to weigh less than 13½ ounces.

No. 1.—Sections to be well filled, combs firmly attached on all sides and evenly capped, except the outside row next to the wood. Honey white or very light amber; comb and cappings from white to slightly off color. Comb not projecting beyond the wood; wood to be well cleaned; no section in this grade to weigh less than 13½ ounces.

CHOICE.—Sections to be well filled; combs firmly attached; not projecting beyond the wood, and entirely capped, except the outside row next to the wood. Honey, comb, and cappings from white to amber, but not dark; wood to be well cleaned; no section in this grade to weigh less than 12 ounces.

No. 2.—This grade is composed of sections that are entirely capped, except row next to wood, weigh-

ing from ten to twelve ounces, also of such sections that weigh 12 ounces or more, and have not more than 50 uncapped cells all together, which must be filled. Combs and cappings from white to amber in color, but not dark; wood to be well cleaned.

EXTRACTED HONEY.—Must be thoroughly ripened; weigh 12 pounds per gallon. It must be well strained, and packed in new cans. It is classed as white, light amber, and amber.

STRAINED HONEY.—This is honey obtained from combs by all other means except the centrifugal extractors, and is classed as white, light amber, amber, and dark; it must be thoroughly ripened and well strained. It may be put up in cans that previously have contained honey.

BOSTON.—We quote fancy white comb at 16 to 17; No. 1 white comb, 15 to 16; fancy white extracted, 10 to 11; light amber, 9 to 10; amber, 8. Beeswax, 30.

Boston, Oct. 21.

BLAKE-LEE CO.

COLUMBUS.—Receipts are light, and demand good. Colorado double-deck for 24-section case, \$3.60; New York, Ohio, and Michigan fancy, per lb., 17½; No. 1, per lb., 16½; No. 2, per lb., 14½. Columbus, Oct. 17. THE EVANS & TURNER CO.

INDIANAPOLIS.—Extracted honey of finest quality in five-gallon cans is selling at 10½ to 12, according to quantity. No. 1 and fancy white comb sells for 16 to 17. Beeswax is in good demand, and producers are being paid 30 cts. per pound.

Indianapolis, Oct. 21. WALTER S. POWDER.

SCHENECTADY.—Colder weather has stimulated the demand for honey, and our stock has been much reduced as a result, but with no advance over last quotations in prices. Both comb and extracted buckwheat are scarce, and most of the stock offered as buckwheat is really mixed with other grades. We are unable to fill orders for straight buckwheat extracted.

Schenectady, Oct. 19. CHAS. MCCULLOUGH.

ALBANY.—The honey market is steady, with some improvement in consumption. The crop is light, especially of buckwheat; but the output of beekeepers increases yearly, so there will be honey enough for all. We quote fancy white, 16; No. 1, 15; mixed, 14; buckwheat, 13 to 14. There is a rather better demand for extracted than usual at this season; buckwheat, 7½; amber, 8 to 8½; white, 9 to 9½. Beeswax brings 30 to 32.

Albany, Oct. 17.

H. R. WRIGHT.

KANSAS CITY.—The receipts of both comb and extracted honey are more liberal, the demand very good. With cooler weather we look for a still better demand. We quote No. 1 white comb, 24-section cases, \$3.25 to \$3.35; No. 2 ditto, \$3.00; No. 1 amber ditto, \$3.00; No. 2 ditto, \$2.75; extracted white, per lb., 8½; extracted amber, 6 to 7. Beeswax, 25 to 28.

C. C. CLEMONS PRODUCE CO.

Kansas City, Oct. 18.

SURE, OLD COMBS ARE VALUABLE

IF shipped to us for rendering. . . WE EXTRACT 99½ per cent OF WAX, and then pay you Highest Market Prices, or 2 cents additional in trade. . . YOU CAN'T APPROACH THAT FOR PROFIT. . . We need great quantities of Comb and Extracted Honey. . . Write us.

THE FRED W. MUTH CO.

"The Busy Bee Men"

51 Walnut Street

Cincinnati, Ohio

The Best Time to Buy Supplies

The season just past has demonstrated more clearly than ever the necessity for being prepared for a honey-flow BEFORE it comes. If you wait until the season is upon you, the chances are that the greater part of the crop will be lost while you are impatiently waiting for supplies to arrive. It may seem a little early now to think of next season's honey harvest; but the fact of the matter is, this is just the time to order goods for next season.

We are beginning now to replenish our stocks. We shall have carload orders coming from the factory very often for the next few weeks. Special orders placed now can have just the attention they need, both here and at the factory, and you may have your goods sent in one of our cars, thereby saving on transportation charges. Regular stock will come straight to you from our warehouse in new unbroken packages, and you can put the goods together in your odd minutes, thereby saving the expense of extra help in the spring.

Our usual discounts for early orders apply again this season—5 per cent for cash orders sent in November, the discount diminishing one per cent per month as the season advances. These discounts mean a considerable saving, and you might as well take advantage of the highest by ordering now. No change of prices has as yet been announced, and you may, therefore, order from your present catalog. If your catalog has been mislaid, write us at once and we will send another.

If your season's crop of honey is not yet disposed of, we can give you a good price and handle it promptly. Send samples of extracted and full information as to containers, flavor, quantity, price, etc. We also handle comb honey.

A Business Proposition.

Your money in the savings bank is drawing 3 per cent, or at most 4 per cent interest. Here is an opportunity to invest it at 12 per cent—8 per cent more than it is now earning.

In most localities this has been a good season for honey and for making increase. Prospects were never better than for the coming season, and you are almost certain to be needing supplies in the spring. If you wait until the first of April or later, you must pay full catalog prices. If your order and remittance are sent in during November, a discount of 5 per cent will be allowed, five per cent on money invested for five months is equivalent to 12 per cent per annum, figured for five months' time. It looks good, doesn't it? Why not effect this saving by ordering now, and thus also secure the peace of mind that will result from having your supplies all ready when you need them most? Your order can be sent in now, and the goods will be shipped at any time to suit your convenience.

Best goods, best service, best treatment, are insured by sending your orders to OHIO'S BEE-SUPPLY CENTER—special headquarters for beekeepers in Ohio, West Virginia, and Western Pennsylvania. If you haven't a catalog, ask for it.

EDMUND W. PEIRCE
136 West Main St., Zanesville, Ohio

Honey reports continued from page 2.

CINCINNATI.—The demand for comb and extracted honey is fair, with a good supply. No. 1 white comb honey sells in large lots at \$3.00 per case, 24 sections; there is no demand for off grades. White extracted honey in 60-pound cans is selling from 9½ to 10 cents; light amber, in barrels, 7 to 7½; in 60-pound cans, 8 to 8½. Beeswax, fair demand, sells at \$33.00 per hundred. The above are our selling prices, not what we are paying.

Cincinnati, Oct. 17.

C. H. W. WEBER & CO.

BANKING BY MAIL

For the benefit of those who can not call at the bank to transact their financial affairs, this institution has established a "Banking by Mail" plan which is rapidly growing in favor.

All that is necessary to open an account is to send your money to us by registered letter, check, money order, or draft, and a pass-book will be sent you immediately.

Further information will be gladly furnished upon request.

E. B. SPITZER, Cashier

The Bank that Pays 4 per cent

ZANESVILLE.—Arrivals of honey are not heavy but are about sufficient to meet the present demand. For the next month or six weeks there should be a pretty good movement, but after that time, during and succeeding the holiday season, the demand is usually light. In small lots to retail grocers 18 to 19c is being received for best grades of white comb, prices being shaded somewhat on quality orders. White extracted in 60-lb. cans is quoted at 9½ to 11c, according to quantity. Producers are receiving for beeswax 28c cash, 30 in exchange for supplies.

LEARN BEEKEEPING from the Beginning

"First Lessons In Beekeeping" and the American Bee Journal, one year, Both for Only **\$1.00**

"First Lessons In Beekeeping" is a 190-page book telling all that the beginner need know. It has an attractive paper cover, and many illustrations.

"Doolittle's Scientific Queen-rearing," and the American Bee Journal, one year, Both for Only **\$1.00**

Doolittle's "Scientific Queen-rearing" book contains 126 pages, and is bound in leatherette with round corners. It tells in the clearest way possible just how the famous queen-breeder, Mr. G. M. Doolittle, rears the best of queen bees in perfect accord with Nature's way. As all know, Mr. Doolittle has spent some 40 years in rearing queens and producing honey. He has no superior as a queen-breeder. You can learn to rear fine queens by following his directions.

The beginner will want "First Lessons;" the older beekeeper should have "Scientific Queen-rearing." You will not regret it if you send your \$1.00 now and get either one of these books with the JOURNAL, as the JOURNAL itself is worth more than the total cost.

AMERICAN BEE JOURNAL, HAMILTON, ILLINOIS

"If goods are wanted quick, send to Pouder."

Please Consider This

I have a business proposition to make you which will be mutual and profitable. If you will place your orders for Bee Supplies early I can save money for you; and what I can save in this way I am more than glad to turn over to you, because it gives us employment during the dullest season and relieves us during the rush season, and there will be no complaints, no delays, and no disappointments, and you may as well save the money. In ordering Bee Supplies during November you may deduct 5 per cent. This discount will decline one per cent per month. You will readily understand the convenience of securing your supplies early, and then having the opportunity of assembling them at your convenience. To be available, the order must be accompanied with remittance. The goods offered are the Root quality, and I do not know of any displeased patrons; but I am fortunate in having hundreds of letters commending the goods and my method of handling the business.

LaBoga, Ind., Aug. 6, 1902.

Walter S. Pouder, Indianapolis, Ind.

This honor is the finest that I have ever received—even finer than your previous shipment. From experience in buying from different houses I have learned to come to you when I want the best in honey or bee supplies. I find that you give better goods and better service than any other house in the country.

GEORGE E. HAVENS.

South Barre, Vt., Aug. 24, 1902.

Walter S. Pouder, Indianapolis, Ind.

Your paper honey-jars are perfection for local trade.

GEORGE E. MORRIS.

If you are in need of more honey for your local demands I am prepared to supply you promptly with very finest quality.

If my catalog has been misplaced, write me and another will be sent.

Walter S. Pouder, Indianapolis, Ind.

859 Massachusetts Avenue

"falcon" BEE SUPPLIES

"The Finest Made" at 5 Per Cent Discount in November

Mr. Beekeeper, now is the time to take advantage and purchase your requirements for the coming season, and save 5 per cent discount. We are especially prepared to fill all LARGE, EARLY ORDERS, and can give all orders, either LARGE or SMALL, prompt attention.

Hives and supplies purchased now can be gotten ready during the rainy days and fine time, thus costing less to put together in addition to making big interest on the money invested for only a few months; and don't forget that you are buying at this discount these "standards of perfection" goods, "FALCON" goods.

Have you descriptive circular of our air-spaced hives? They stood the test of the winter of 1911, and that's saying a lot. Better try five.

Dealers Everywhere.

Red Catalog Postpaid.

PROTECTION HIVE

The best and lowest-priced double-wall hive on the market. This hive has 1/2" material in the outer wall, and is not cheaply constructed of 1/4" material as are some other hives on the market. Packing or dead-air space as you prefer. Remember, winter is approaching. Get your bees into comfortable quarters before it is here. Send for a catalog.

A. G. WOODMAN CO., GRAND RAPIDS, MICH.

Early- Order Discounts

For years we have followed the example of the factory, and allowed our customers the benefit of the discounts offered by the Root Company for orders placed during the fall months for supplies for use the following season. This discount for November is 5 per cent for cash with orders, and diminishes one per cent per month as the season advances. We are sure many of our beekeeping friends will want to take advantage of this discount, not only because of the actual cash saving, but because of the convenience of getting goods before the rush of the busy season.

The Goods We Handle

We have said so much about the quality of Root's goods, and they are already so well known by beekeepers, that it hardly seems necessary even to mention the fact, except to remind you that we carry always a full and complete stock of Root's goods only. If you have tried others and they haven't given just the satisfaction they should, send us a trial order this season. For quality of material and accuracy of workmanship you will find them unexcelled.

Our Service

Each season we aim to make some improvement in the service we can give our customers. We aim to keep our stocks always complete, and to allow no order, large or small, to drag through our establishment. The shipping facilities at our command enable us to get goods started to you by direct routes at once. Whether your order is large or small it will have the most careful attention at our hands from the time it reaches us until the goods are in your hands.

Full information on any point regarding beekeeping in the Southwest cheerfully given on request.

PUBLICATIONS ON BEE CULTURE

Please use coupon below, checking the numbers of items wanted.

The pamphlets and booklets listed below are of more than ordinary interest:

- 1 **My First Season's Experience with the Honey-bee.** By the "Spectator," of the *Outlook*, of New York. A ten-page leaflet detailing the experiences of this well-known writer. You will read the leaflet through before you lay it down. Free.
- 2 **The Bee-keeper and Fruit-grower.** A 15-page booklet, giving actual facts regarding the value of bees to fruit, and showing how bee-keeping may be doubly profitable to the fruit-grower. Fruit-growers are realizing as never before the necessity of having honey-bees in close proximity to their blossoming fruit. Free.
- 3 **Bee-keeping for Sedentary Folk.** A 24-page leaflet reciting the actual experiences of an amateur bee-keeper, showing what equipment is best, points derived, etc. Free.
- 4 **Catalog of Bee-keepers' Supplies.** Our complete catalog will be mailed free to any address on request.
- 8 **Habits of the Honey-bee.** By Dr. E. F. Phillips. A somewhat scientific handling of the habits and anatomy of the bee. Price 10 cts.
- 9 **How to Keep Bees.** A book of 228 pages detailing in a most interesting manner the experience of a beginner in such a way as to help other beginners. Price \$1.00 postpaid.
- 10 **The A B C of Bee Culture.** A complete encyclopedia of bees, of 578 pages, fully illustrated, \$1.50 postpaid; half leather, \$2.
- 11 **Cleanings in Bee Culture.** A 64-page illustrated semi-monthly magazine, the leading exponent of bee culture in this country. Ten cents per issue, but to new subscribers we will furnish it six months for 25 cts.
- 12 **Back-yard Bee-keeping.** Six interesting lessons written in readable newspaper style. Many facts to encourage the "City Bound" man or woman with the back-to-the-land longing. Free.
- 15 **Truth About Sweet Clover.** Interesting booklet of nearly 100 pages. Tells of value of sweet clover for honey, for plowing under, as fertilizers of the soil, and food for horses, cattle, swine, sheep, etc. Free.

The coupon below may be used as an order sheet by properly checking the numbers of items wanted and adding your signature, and remittance, if required.

JOHN W. CASH, Bogart, Ga.

FOR SALE.—Two carloads of choice sage honey by the can or case. Samples of honey and desirable California souvenir free for a stamp.
C. W. DAYTON, Chatsworth, Cal.

Our fall crop of comb honey at \$3 per case of 24 sections, well filled; six cases to carrier; extracted, 8 cts. to 9 cts.; two sixty-pound cans to case. QUIRIN-THE-QUEEN-BREEDER, Bellevue, Ohio.

FOR SALE.—White-clover and basswood extracted honey, blended in the extractor; put up in brand-new 60-lb. cans, 2 cans per case, at \$12 per case of 2 cans or more, F. O. B. Flint. Cash with order. This honey is the finest I have ever produced. L. S. GRIGGS, 711 Avon St., Flint, Mich.

RASPBERRY HONEY.—Our crop of raspberry honey this season is very fine—the best in quality I ever saw. It was left on the hives until it was all sealed, and thoroughly ripened by the bees. Thick, rich, and delicious. It is put up in new 60-lb. tin cans. Price \$6.00 per can. Large-sized sample by mail, 10 cts. Said 10 cts. may be deducted from any order sent for honey.

ELMER HUTCHINSON, Pioneer, Mich.

HONEY AND WAX WANTED

WANTED.—Honey, good extracted. Quote, with sample. J. C. BULL, Hammond, Ind.

WANTED.—Quantity choice extracted honey. Quote lowest price. BULL & CAVANAGH, Hammond, Ind.

WANTED.—Comb, extracted honey, and beeswax. R. A. BURNETT & Co., 173 S. Water St., Chicago.

WANTED.—Car of light-medium or dark-amber extracted honey in cases of two five-gallon cans. We prefer the light amber to the dark, but can use quite a quantity of either grade provided the flavor is mild. Our trade does not want a pronounced-flavored honey. Submit a two or four ounce sample and quote your best prices delivered to your railroad station.

THE A. I. ROOT CO., Medina, Ohio.

FOR SALE

FOR SALE.—Or exchange for extracted honey, good second-hand hives and supplies.
N. F. GUTE, Owosso, Mich.

A full line of Root's goods at Root's prices.
A. L. HEALY, Mayaguez, Porto Rico.

FOR SALE.—Root or Falconer bee supplies. Free catalog. Save freight.
G. F. STANTON, Buckingham, Fla.

FOR SALE.—Empty second-hand cans, two cans to the case, good as new; 25 cents per case.
C. H. W. WEBER & Co., Cincinnati, O.

For sale or exchange for income-bearing property, our entire business, 1500 colonies of bees and fixtures. Reason for selling, poor health.
OGDEN BEE AND HONEY CO., Ogden, Utah.

FOR SALE.—A full line of beekeepers' supplies; also Italian bees and honey a specialty. Write for catalog and particulars.
THE PENN CO., (Successor to J. M. Jenkins.) Penn, Miss.

SEED WHEAT.—Improved Poole seed wheat—one of the highest yielders at the Ohio Experiment Station, where this seed originated. Guaranteed free from all foul seeds. Re-cleaned ready for drilling. Write for prices.
L. H. RANDALL, Medina, O.

WANTS AND EXCHANGES

WANTED.—Danz. bodies with or without frames, bottoms, and tops. DR. SHORTLIDGE, Lima, Pa.

WANTED.—To sell or exchange for honey, 19 vials of GLEANINGS, clean.
L. A. DOSCH, Miamisburg, O.

WANTED.—To exchange 190 acres and 30-room hotel for bees and supplies of honey.
ERNEST W. FOX, El Paso, Texas.

WANTED.—Apiarist or helper who is willing to invest \$250 in an apiary. We allow you wages and percentage of crop, as manager. Particulars on request.
APIARIST, Sawtelle, Cal.

WANTED.—To rent an apiary of from 200 to 300 colonies for the season of 1913. For further particulars address
VERN O. DERBY, Box 16, Wileyville, W. Va.

WANTED.—A partner, experienced beekeeper, qualified to rear queens, to help raise queens in California and produce honey in Nevada. \$4000 required.
C. I. GRAHAM, Reno, Nev...

WANTED.—To know if there is any beekeeper in Cuba who can furnish me with an ounce of aguiñaldo seed; will pay \$2.50 in advance for it to the first party replying to this advt.

W. J. YOUNG, Arcibco, P. R.

BEES AND QUEENS

Our queens will please you. Price \$1.00 each.
C. W. PHELPS & SON, Binghamton, N. Y.

FOR SALE.—200 colonies in eight-frame hives.
Run for comb honey. Good location.
A. W. MCBRIDE, Las Cruces, N. Mex.

FOR SALE.—50 colonies healthy good Italians to
common blacks; every thing in connection with
them.
M. E. BABB, Williamstown, Mo.

FOR SALE.—Three-banded Italian queens bred for
honey, gentleness, and prolificness. One, \$1.00; 6
for \$5.00.
WM. S. BARNETT, Barnett's, Va.

FOR SALE.—25 colonies of bees, a quantity of
hives, comb-supers, and other supplies. If you
want to save money, write.
LEON C. WHEELER, Barryton, Mich.

FOR SALE.—250 colonies bees; 5 acres land;
small house, right in town; school, church, and
railroad depot, all in 1000 feet of house, \$1800
cash.
C. A. BUTTS, Normanna, Texas.

Colonies of Italian bees in L. hives, 10-fr., built
on full brood-frames, wired, body and shallow super,
redwood, dovetailed, three coats white, sheeted lids;
each neat, modern, and full of stores—any time.
JOS. WALDRATH, Antioch, Cal.

Golden Italian queens that produce golden bees,
the brightest kind. Gentle, and as good honey-gath-
erers as can be found. Each, \$1.00; six, \$5.00;
tested, \$2.00; breeders, \$5.00 to \$10.00.
J. B. BROCKWELL, Barnett's, Va.

FOR SALE.—Moore's strain and golden Italian
queens, untested, \$1.00; six, \$5.00; twelve, \$9.00;
Carniolan, Banat, and Caucasian queens, select,
\$1.25; six, \$6.00; twelve, \$10.00. Tested, any kind,
\$1.50; six, \$8.00. Choice breeders, \$3.00. Circular
free.
W. H. RAILS, Orange, Cal.

HELP WANTED

WANTED.—Experienced man to pack bees for
winter.
F. B. CAVANAGH, Hebron, Ind.

To employ an expert apiarist for 1913—only
those with good references need apply.
L. B. CAPPS, Woodland, Yolo Co., Cal.

WANTED.—Honey salesmen. Our men average
\$40 per month, board and expenses. This is your
opportunity to join us and do as well.
BULL & CAVANAGH, Hammond, Ind.

REAL ESTATE

FOR SALE.—Apiary, farm, good horse, mule, 2
milk cows, and start of hogs; 60 acres of land, 30
cleared; medium building and all farm tools; one
mile from town. WM. WHEELER, Watertown, Fla.

WANTED.—To buy an apiary or line of apiaries
in a southern climate, in or out of the United States,
where the work begins in November and ends in
March. I want to spend a few years in a warmer
winter climate, coming back here in the summer.
Address, giving particulars,

THOS. J. STANLEY, Manzanola, Otero Co., Colo.

My beautiful "Home of the Honeybees" is one
6-room house, other out-buildings, 3 1/5 acres land,
300 colonies healthy Italian bees in eight-frame
hives, 500 full-depth supers of extracting combs
wired, built on full sheets foundation, 100 comb-honey
supers, 1 eight-frame extractor, 1 gas-engine, 1
H. P. Fine alfalfa and sweet-clover location; 1 mile
out of Roswell. Just as well located as can be.
Abundance of shade and water. All must sell to-
gether. \$5000. W. H. CRAWFORD, Roswell, N. Mex.

INDIAN RUNNER DUCKS

Runners, hundreds, light fawns, also dark pen-
ciled, white eggers; \$1.00 and up.
R. O. DICKSON, Box 28, La Harpe, Ill.

Fawn and White Indian Runner duck eggs, \$1.00
per 11; \$7.00 per 100. Day-old ducklings, 25 cts.
each. Mailing list free.

KENT JENNINGS, Mt. Gilead, Ohio.

INDIAN RUNNER DUCKS. American Standard
light fawn and white. I have a fine lot of one-year-
old breeders for sale at a real bargain price. I can
start you, and start you with the best. Write me.
C. O. YOST, Rt. 4, Box D, Winchester, Ind.

PIGEONS

FOR SALE.—Eight pair of extra good homing
pigeons.
LEWIS FRANCISCO, Mosinee, Wis.

PIGEONS! PIGEONS! Thousands, all breeds; many
satisfied customers everywhere; start with our
money-making pigeons. Large free illustrated mat-
ter.
PROV. SQUAB CO., Providence, R. I.

MISCELLANEOUS

White and brown ferrets. Stamp for description
and prices. JEWELL'S FERRET KENNELS, Spencer, O.

MICROSCOPE.—Six powers, from 45 to 200 di-
ameters. Shows well the difference in size and form
of blood corpuscles of man, chicken, and frog. Been
used, but good as new. Send for interesting and
instructive circular. J. F. PHIN, Paterson, N. J.

Get your winter supply of apples direct from
western New York, noted for producing apples of
fine quality. Hand-picked Spies or Baldwins. No.
1, \$3.25 per bbl.; No. 2, \$2.25. Will exchange for
a limited quantity of honey.
ELMER GRESSMAN, Hamburg, N. Y.

WANTED.—Copies of GLEANINGS in good con-
dition, for Jan. 1, 1912, and for Feb. 15, 1912.
Subscribers having perfect copies of either of these
dates will please notify us by post card, if they
wish to exchange either number for a two months'
credit on time of subscription.

THE A. I. ROOT COMPANY, Medina, Ohio.

BEEKEEPERS DIRECTORY

Nutmeg Italian queens, leather color, after June
1, \$1.00.
A. W. YATES, Hartford, Ct.

Well-bred bees and queens. Hives and supplies.
J. H. M. COOK, 70 Cortlandt St., New York.

Improved golden-yellow Italian queens for 1912;
beautiful, hustling, gentle workers. Send for price
list to
E. E. LAWRENCE, Doniphan, Mo.

QUEENS.—Improved, red-clover Italians, bred for
business; June 1 to Nov. 15, untested queens, 75
cts.; select, \$1.00; tested, \$1.25 each. Safe arrival
and satisfaction guaranteed.

H. C. CLEMONS, Boyd, Ky.

Quirin's famous improved Italian queens, nuclei,
colonies, and bees by the pound, ready in May.
Our stock is Northern-bred, and hardy; five yards
wintered on summer stands in 1908 and 1909 with-
out a single loss. For prices, send for circular.

QUIRIN-THE-QUEEN-BREEDER, Bellevue, O.

Honey reports continued from page 2.

CHICAGO.—Sales of honey during the month of October have been above the average, both in comb and extracted. The market is well supplied, but not overstocked for this season of the year (the major part of the comb being sold during October and November). Prices on No. 1 to fancy comb honey range from 17 to 18; off grades from 1 to 3 cts. per lb. less; amber grades, 12 to 15; white extracted, 8 to 10; amber, 7 to 8. Beeswax brings 30 to 32.

Chicago, Oct. 18.

R. A. BURNETT & CO.

CINCINNATI.—The demand for both extracted and comb honey is good. We are selling strictly fancy and number one comb honey at \$3.75 to \$3.85 a case. Lower grades are not wanted at any price. White-clover extracted honey we are selling at 8½ to 10, and amber honey at 6½ to 8½, according to the quantity and quality purchased. The above are selling prices. We are paying 28 cts. cash or 30 in trade for choice bright yellow beeswax delivered here. We render beeswax from old comb and cappings. Write us.

Cincinnati, Oct. 24. THE FRED W. MUTH CO.

NEW YORK.—We have a fairly good demand for white comb honey, at prices ruling about the same—that is, fancy white, 15, with some exceptionally fine lots which will bring 16; No. 1 white, 14; No. 2 white and light amber, around 13; mixed and buckwheat at from 10 to 12, according to quality. Buckwheat honey seems to be rather scarce. The crop evidently did not turn out as large as expected. Extracted is in fair demand for all grades, white clover selling at 8½ to 9; light amber at 8, and amber at from 7 to 7½. West Indian is arriving quite freely, and sells at from 75 to 85 cts. per gallon, according to quality. Beeswax is quiet at 30.

New York, Oct. 17. HILDRETH & SEGELKEN.

LIVERPOOL.—Since our last report there has been very little trade doing, but the honey market is steady. Some 52 barrels of Peruvian (for manufacturing purposes) have been sold at \$5.88, and 50 to 60 cases of Californian at \$10.20 to \$11.40—a slight improvement. Jamaican, good quality, is selling in retail at \$7.44 to \$8.16, and there is a fair stock to be disposed of. Quotations are as follows: Haitien, \$6.24 to \$7.52 per cwt.; Peruvian, \$5.76 per cwt.; Chilian, \$5.76 to \$8.16 per cwt.; Jamaican, \$6.00 to \$8.40 per cwt.; Californian, \$9.60 to \$11.04 per cwt. Chilian beeswax offers at \$37.48 to \$41.12, but trade is slow. Sierra Leone is steady at \$33.54 and Gambia at \$34.48. Quotations are as follows: Chilian, \$33.88 to \$39.92; African, \$32.64 to \$34.00; West Indies, \$31.44 to \$36.28.

Liverpool, Oct. 15.

TAYLOR & CO.

ST. LOUIS.—The demand for choice comb honey keeps up very well, and the supply is small, especially of the better grades. There is considerable dark comb honey from the southern States on the market, which sells slowly and at low figures. We quote fancy white at 16 to 17; No. 2 white at 15; amber, 13 to 15; dark, 9 to 11. Broken and inferior quality is not wanted, and sells very low. The demand for extracted honey is good, and quotable as follows: Light-amber southern in barrels and half-barrels at 7; dark, 6 to 6½; choice light amber in five-gallon cans at 7½. There is very little white-clover honey on the market, which would sell at 9 to 9½; California white at 9; light amber, 8½; amber, 8 in five-gallon cans. Beeswax is in good demand at 29½ for prime. Inferior and impure sells for less.

St. Louis, Oct. 17. R. HARTMANN PRODUCE CO.

STRAW BEEHIVES.

We have frequently had calls for old-fashioned straw hives which we have not always been able to supply. We have imported from England a few which we can offer at \$1.50 each, shipped from New York or from here. Shipment has arrived in New York, but the part to come here has not come in as we go to press, but should arrive soon. These hives are cone-shaped, about 16 inches high and the same diameter.

THE A. I. ROOT CO., Medina, Ohio.

THE YOUTH'S COMPANION FOR 1913.

The Youth's Companion appeals to every interest of family life, from housekeeping to athletics. It begins with stories of youthful vim and vigor, with articles which disclose the secrets of successful play in the great games, with charming tales of life at the girls' colleges. But the Companion does not surrender these readers when they have entered the more serious paths of life. Mothers will welcome the page for little children and the weekly doctor's article. Fathers will find the important news of the day as it is, and not as it is rumored to be. The entire household will appreciate the sketches which touch gently on common foibles or caricature eccentricity. In short, for less than four cents a week The Companion brings into the home clean entertainment, pure inspiration, fine ideals, increase of knowledge.

Names rarely seen in tables of contents will be found in The Companion's Announcement for 1913, which will be sent upon request—with samples of the paper, to those not familiar with it.

Every new subscriber for 1913 will receive free all the issues for the remaining weeks of 1912; also, free, The Companion Window Transparency and Calendar for 1913, in rich, translucent colors—the most beautiful of all Companion souvenirs.

THE YOUTH'S COMPANION,

144 Berkeley St., Boston, Mass.

SPECIAL NOTICES

A. I. ROOT

THE CHARITY THAT "SUFFERETH LONG AND IS KIND."

Just as we go to press, Oct. 26.—In Our Homes for this issue, page 708, you may notice that I have been pleading for a more Christianlike spirit, even in politics. Well, after that was in print, and after the splendid address, "One Standard of Morals," was also in print, a friend sent me a clipping from the Baltimore *Sun* of Oct. 21. The address, we are told, was in a well-attended meeting in Lehmann's Hall. In this address it seems he (Chafin) was particularly bitter toward the Maryland Superintendent of the Anti-saloon League. He says:

"I will give \$1000 to that bluffer, William H. Anderson, or any other man he may name, who will answer my printed lecture, 'One Standard of Morals.' The entire Anti-saloon League from top to bottom is a humbug. Anderson is no better than the league, and that is a fake."

And further on, after the meeting was over, he is reported as having spoken as follows:

"There are only four or five States in this country that still cling to the delusion that the Anti-saloon League will do away with the liquor traffic, and I am sorry to say that Maryland is one of them. But if 'Dry Bill' will accept my challenge, it will not be long before I nail his hide to the fence as I did with the Anti-saloon League superintendents in Wisconsin and California."

The *Sun* gives the above in quotation marks, indicating that it was taken down by a stenographer. I also have another clipping from the *Sun* the day after, giving Anderson's reply. It is courteous and gentlemanly, and given in as much of a

(Christian spirit as could be expected from one under such a provocation. I am well aware that the enemies of temperance, and of the Prohibition party especially, will not hesitate to exaggerate; but I think there is scarcely a doubt that Mr. Chafin, great man that he is, was led into doing great damage, perhaps unconsciously, to the very cause he has most at heart.

By the way, what have we a right to expect of the President or an ex-president, or of one who aspires to the great office of presidency of the United States? How would this do? Such a man should be one who "suffereth long, and is kind;" "doth not behave himself unseemly; seeketh not his own; is not easily provoked; thinketh no evil;" he "rejoiceth not in iniquity, but rejoiceth in the truth; beareth all things, hopeth all things, endureth all things."

UNITED WE STAND, DIVIDED WE FALL.

A good brother just now writes that he is pleased with the Prohibition platform, and would vote the Prohibition ticket were it not for the fact that the Prohibitionists do not insist on observing Sunday on Saturday. If this thing goes on, how shall we ever be able to put up a united front against the enemy?

Convention Notices

Notice is hereby given that the delegate meeting of the National Beekeepers' Association will be held in Cincinnati, February 12, 13, 1913. While all sessions will be open to the members and visitors, some sessions will be devoted wholly to business through the delegates. At least one session each day will be set aside for the members to discuss such subjects as may be decided upon later, notice of which will be given out by the secretary. The subjects that will likely be selected for discussion will be of national character rather than pertaining to the production of bees and honey. Remus, Mich., Oct. 1. E. D. TOWNSEND.

PROGRAM OF ONTARIO BEEKEEPERS' CONVENTION TO BE HELD IN TORONTO ON NOV. 13, 14, 15.

WEDNESDAY AFTERNOON.

Minutes, P. W. Hodgetts, Secretary, President's address, Dennis Nolan. Reply by Vice-president. Discussion opened by Mss E. Robson.

Improved methods of selling honey, E. E. Tyrell, Detroit, Mich.

Question-drawer, F. W. Krouse.

WEDNESDAY EVENING.

Open meeting.

THURSDAY MORNING.

The foul-brood situation in Ontario. Management of out-apiaries; 1. With complete outfit at each yard, using auto or horse for transportation, H. G. Sibbald.

2. Management at long range, J. L. Byer.

3. Moving outfit on motor truck, Enos Farr.

4. From one center, with stationary machinery and motor truck to haul supers home, F. J. Miller.

THURSDAY AFTERNOON.

Preparing bees for winter, J. F. Dunn.

Question-drawer, J. Newton.

Address by Hon. J. S. Duff, Minister of Agriculture.

Election of officers, etc.

THURSDAY EVENING.

Bees, poultry, and fruit, J. W. Clark. Discussion opened by R. G. Houghton.

The district representative, and how he can help the beekeeper, A. D. McIntosh, B.S.A.

FRIDAY MORNING.

Experiences of the season, Miss Margaret Scott. Bee-breeding, F. W. L. Sladen, Assistant in Apiculture, Ottawa, Ont.

Unfinished business.

The following is the program of first annual convention of Iowa State Beekeepers' Association, to be held in the club room of the Savery Hotel, Des Moines, Dec. 12, 13, 1912:

THURSDAY, 10 A. M.

Address of the President, W. P. Southworth, Sioux City.

Report of Secretary-Treasurer, C. L. Pinney, LeMars. Greeting from Illinois, C. P. Dadant, Hamilton, Ill. Committee appointments.

THURSDAY 2 P. M.

Production of comb honey, F. W. Hall, Colo. Production of extracted honey, D. E. Lhommedieu, Colo. Wintering problems, C. H. True, Edgewood.

FRIDAY, 10 A. M.

Fuss and fun of beekeeping, Eugene Secor, Forest City. The foul-brood situation, Frank C. Pellett, State Inspector, Atlantic. State aid for the industry, E. E. Townsend, Ft. Dodge.

FRIDAY, 2 P. M.

Question-box.

Open discussion led by prominent beekeepers.

Making the most of the home market. Co-operation in marketing. Increasing the forage and bettering the locality. Exhibits at fairs as a means of advertising. Election of officers.

Let every beekeeper bring samples of his best product to put on display, and come prepared to demonstrate any new kind or short cut that is likely to prove of value to the fraternity.

Headquarters will be at the Savery Hotel.

FIVE PER CENT DISCOUNT FOR NOVEMBER CASH ORDERS

To those who buy now for next season, sending remittance with the order during the month of November subject to the conditions named below, we allow 5 per cent discount.

This discount will apply on all articles listed in our regular catalog at current corrected prices to date except as follows:

Tinned wire, paint, Bingham smokers, Porter bee-escapes, glass and tin honey-packages, scales, bees and queens, bee-books, papers, labels, printed matter, bushel boxes, seeds, and specialties not listed in our general catalog. Where any or all of these articles in a general order do not exceed fifteen per cent of the whole order, the discount may be deducted from the whole order, including these items which are otherwise excepted.

THE A. I. ROOT CO., MEDINA, O.

After 60,000 Cars

By R. E. Olds, Designer

I have built to date over 60,000 cars.

For 25 years I have watched their performance. I have found out and corrected a myriad shortcomings. I've acquired a world of caution

Some say I'm "old-maidish"—too careful, too slow. But I call these things standards. I've made them my code.

My Latest Extreme--Big Tires

The new Reo the Fifth—out Oct. 1—is equipped with 34x4-inch tires.

That is 22 per cent greater tire capacity than I ever have used on a car of this size. Yet this car was always much over-tired, compared with usual standards.

These oversize tires add 30 per cent to my tire cost. But they add 65 per cent to the average tire mileage. They should save you in tire waste some hundreds of dollars during the life of the car.

Remember this fact when you come to compare cars. The tires on Reo the Fifth are now 34x4.

Make Some Other Comparisons

In judging cars, in these days of close prices, it is very important to make other comparisons.

There are dollars saved sometimes which cost buyers ten dollars. What you want is final economy.

Watch points like these:

Reo the Fifth has 190 *drop forgings*. All makers use some of them to get lightness and strength. But Reo the Fifth has 190. And its racy lines, its lightness and strength are due largely to those costly forgings.

My springs are *two inches wide*. Each spring has *seven leaves*. The front springs are 38 inches long—the rear are 46.

I use *fifteen roller bearings*—11 of the Timken, 4 of the Hyatt High Duty.

Every important bearing has *bronze bushings*—even the smallest of them.

For safety's sake I use *14-inch brake*

drums. I use a centrifugal pump. I use a \$75 magneto, to insure a hot spark when the car runs slowly. You can start on this magneto.

My carburetor is *double heated*—with hot air and hot water. So poor gasoline can't give trouble.

For big margin of safety, every driving part in this car is built for *45-horsepower requirements*.

No Chances

I take no chances on any part of this car, for chances sometimes cost money.

Each lot of steel is *analyzed twice*. Gears are tested in a crushing machine, to stand 75,000 pounds.

Each engine gets *five tests*—about ten hours each. It is run for 28 hours in the chassis.

I limit my output to an easy capacity of 50 cars a day. So the cars are built slowly and carefully—no man is ever rushed.

Parts are ground over and over. Our factory system insures a thousand inspections.

Petty Savings

I abhor petty savings. I could save, perhaps, \$50 to \$75 per car in the finish and upholstering if I cared to skimp.

But I put on this car a special body which costs more than wood or metal. I save by this 50 pounds in weight, and the body takes a wondrous finish.

I give 17 coats to each body. The fenders, radiator, hood, etc., have two coats of rubber enamel baked on.

The upholstering is deep, and of genuine leather. It is filled with the best curled hair. The backs as well as the seats are filled with springs, to give you the utmost comfort.

Every part shows the final touch. Even the engine is nickel-trimmed. I believe that folks like these perfections.

Center Control

Reo the Fifth has my center control—a single light handle, out of the way, which

does all the gear shifting by moving *three inches* in each of four directions.

Both brakes are operated by foot pedals. So there are no levers to clog the front doors.

The driver sits on the left side, as in electrics, close to the cars he passes. Yet the gear-shifting lever is at his right hand. Note how many great cars are following me in this. The old way of driving will be soon out of date.

Do These Precautions Pay?

The result of all this is that Reo the Fifth sells on a mighty small margin. I am keeping the price under \$1100, with all the new features, including these big tires.

Our profit per car is now a very small item, despite the fact that we make every part ourselves.

Yet there are cars which, at passing glance, seem to undersell this car.

I have told you the facts, so you may judge for yourself if these are things which you care to go without. Would you wish me to save you a little on price by trebling your cost of upkeep?

I am sure you'll say no. I am also sure that the time is coming when most cars

must be built like this. Men won't have them otherwise.

Here's the greatest value any man can give you in a car. If you want such value I want your trade. And you'll be very glad, in years to come, that you picked a car like this.

In 1,000 Towns

A thousand dealers in a thousand towns now offer this new type of Reo the Fifth.

Our 1913 catalog pictures all the details, and shows styles of bodies. Write us for it now.

Nearly 500 Subjects Pertinent to Modern Bee-keeping are Authoritatively Discussed

ADVANCED BEE CULTURE is a beautifully printed book. Best plate paper has been used throughout its 200 pages, with the result that the many fine illustrations are unusually clear in every detail. Bound in attractive and substantial cloth. A volume whose appearance and unquestionable worth justify entitle it to a place in the library of every bee-keeper. No more important work on this fascinating subject has recently appeared.

The untimely death on May 30, 1911, of Mr. W. Z. Hutchinson, author of

Advanced Bee Culture

marked the passing of one of the most brilliant writers who have ever championed the cause of the honey-bee. . . . Perhaps no better tribute to this talented man could be given than that contained in the following paragraph from a testimonial article on Mr. HUTCHINSON's life by Prof. A. J. Cook, in GLEANINGS:

"No one could know him and his work without convincing proof that he stood in the very front ranks of our bee-keeping fraternity. His quick intellect, coupled with his close attention to details, won for him, at the very start, phenomenal success as a queen-breeder. To this, apiculture owes its great good fortune in securing his life-long service in its development. He was temperamentally exact and methodical, transparently honest, and if I were to select one word to characterize our brother it would be genuineness. He was delightfully companionable, and always alert for any new idea or suggestion touching the interests of the work, to which he was so entirely devoted. His quick apprehension and terse clear-cut style as a writer, made him a most reliable exponent of all that was latest and best in the theory and practice of his beloved art."

Most fortunate for all bee-keepers is the fact that Mr. Hutchinson's life was spared just beyond the point when he had completed his reading and correction of the editorial proofs of the new edition of ADVANCED BEE CULTURE. Only a few short days after an editorial by Mr. E. R. Root, editor of GLEANINGS IN BEE CULTURE, who revised Mr. Hutchinson's book, had appeared, the call came, and this sterling, upright man, whom everybody loved, was taken home. Read what Mr. Root has to say of Mr. Hutchinson's book:

As a writer on bees Mr. Hutchinson has few equals. For clearness of style and accuracy of judgment he is second to none. His enthusiasm shines forth on every page. His selection of the new and the useful from an extended discussion is intuitive. The last edition of "Advanced Bee Culture," as well as the new edition before, is made up of the best ideas of our best experts, properly classified and condensed by a master of the art of boiling down discussions. I do not hesitate to say that this is one of the most valuable books on bees that was ever put out; and while its title would indicate that it is designed only for the advanced bee-keeper, yet I am sure that a large number of beginners in the business will find it exceedingly helpful and interesting, especially if they will take it in connection with some other work like the "A B C and X Y Z of Bee Culture," or any text-book designed especially for the beginner class.

\$1.50 Buys a Two-dollar Value

ADVANCED BEE CULTURE costs \$1.00 per copy. GLEANINGS IN BEE CULTURE (semi-monthly)—known and read by bee-keepers throughout the world—\$1.00 for an annual subscription. It is our pleasure, however, to offer this interesting and most useful combination—the book here described, and GLEANINGS one year, both for \$1.50. It is a value you will very seldom find—really it is a good \$2.00 worth for \$1.50.

Foreign postage, 60 cents extra; Canadian postage, 30 cents extra.

PRICE \$1.10 POSTPAID.

The A. I. Root Co., Medina, Ohio

HONEY MARKETS

The prices listed below are intended to represent, as nearly as possible, the average market prices at which honey and beeswax are selling at the time of the report in the city mentioned. Unless otherwise stated, this is the price at which sales are being made by commission merchants or by producers direct to the retail merchants. When sales are made by commission merchants the usual commission (from five to ten per cent), cartage, and freight will be deducted; and in addition there is often a charge for storing by the commission merchant. When sales are made by the producer direct to the retailer, commission and storage and other charges are eliminated. Sales made to wholesale houses are usually about ten per cent less than those to retail merchants.

EASTERN GRADING RULES FOR COMB HONEY.

FANCY.—All sections well filled, combs straight, firmly attached to all four sides, the combs unsoiled by travel-stain or otherwise, all the cells sealed except an occasional one, the outside surface of the wood well scraped of propolis.

A No. 1.—All sections well filled except the row of cells next to the wood; combs straight; one-eighth part of the comb surface soiled, or the entire surface slightly soiled; the outside surface of the wood well scraped of propolis.

No. 1.—All sections well filled except the row of cells next to the wood; combs straight; one-eighth part of the comb surface soiled, or the entire surface slightly soiled.

No. 2.—Three-fourths of the total surface must be filled and sealed.

No. 3.—Must weigh at least half as much as a full-weight section.

In addition to this the honey is to be classified according to color, using the terms white, amber, and dark; that is, there will be "Fancy white," "No. 1 dark," etc.

NEW HONEY-GRADING RULES ADOPTED BY THE COLORADO STATE BEEKEEPERS' ASSOCIATION, DECEMBER 13, 1911.

FANCY WHITE.—Sections to be well filled, comb firmly attached on all sides and evenly capped, except the outside row next to the wood. Honey, combs, and cappings white, and not projecting beyond the wood. Wood to be well cleaned; no section in this grade to weigh less than 13½ ounces.

No. 1.—Sections to be well filled, combs firmly attached on all sides and evenly capped, except the outside row next to the wood. Honey white or very light amber; comb and cappings from white to slightly off color. Comb not projecting beyond the wood; wood to be well cleaned; no section in this grade to weigh less than 13½ ounces.

CHOICE.—Sections to be well filled; combs firmly attached; not projecting beyond the wood, and entirely capped, except the outside row next to the wood. Honey, comb, and cappings from white to amber, but not dark; wood to be well cleaned; no section in this grade to weigh less than 12 ounces.

No. 2.—This grade is composed of sections that are entirely capped, except row next to wood, weigh-

ing from ten to twelve ounces, also of such sections that weigh 12 ounces or more, and have not more than 50 uncapped cells all together, which must be filled. Combs and cappings from white to amber in color, but not dark; wood to be well cleaned.

EXTRACTED HONEY.—Must be thoroughly ripened; weigh 12 pounds per gallon. It must be well strained, and packed in new cans. It is classed as white, light amber, and amber.

STRAINED HONEY.—This is honey obtained from combs by all other means except the centrifugal extractors, and is classed as white, light amber, amber, and dark; it must be thoroughly ripened and well strained. It may be put up in cans that previously have contained honey.

COLUMBUS.—Receipts slightly heavier. Fancy white comb brings 18; No. 1 ditto, 17; No. 2, 14; Colorado extracted-section cases, \$3.60.

Columbus, Nov. 2. **THE EVANS & TURNER CO.**

BOSTON.—We quote fancy white comb at 16 to 17; No. 1 white comb, 15 to 16; fancy white extracted, 10 to 11; light amber, 9 to 10; amber, 8; beeswax, 30.

Boston, Nov. 4. **BLAKE-LEE CO.**

BUFFALO.—Receipts of honey are light, and prices firm; demand is a little slow. Fancy white-clover comb brings 16; No. 1 to choice, 15 to 16; No. 2, 1 to 14; dark comb, 13 to 14; white extracted, 8 to 9; dark, 7 to 7½. Beeswax, 28 to 30.

Buffalo, Oct. 29. **W. C. TOWNSEND.**

ALBANY.—The demand for honey is good now, with a short crop of buckwheat comb and extracted. We quote white comb, fancy, 16 to 17; A No. 1, 15; mixed, 14 to 15; buckwheat mixed, 13 to 13½. We advise letting honey come along before cold weather.

Albany, Nov. 5. **H. R. WRIGHT.**

CHICAGO.—Honey sold well during the latter part of October. Prices ranged on No. 1 to fancy comb from 16 to 18; the amber grades, from 13 to 15. Comb with many unfilled cells is unsalable. White extracted continues to sell chiefly at from 8 to 9; amber grades at 7 to 8. Beeswax brings from 30 to 32, according to color and cleanliness.

Chicago, Nov. 4. **R. A. BURNETT & Co.**

LOS ANGELES.—There is only a small quantity of honey on the Coast unsold, but it should move out rapidly, as it can be bought at very reasonable prices, considering that the market is bare of white and water-white sage honey. We quote light amber sage, about 6¼; light-amber alfalfa, 6; white to water-white alfalfa, 7 to 7¼; all f. o. b. Coast, dollar freight rate by rail. Light-amber sage brings 6½ to 6¾; f. o. b. steamer San Diego, with 60 cents freight rate to New York. Honey has been moving forward steadily, and the indications are that stocks will be practically exhausted long before any new-crop honey is available. At the above prices we would endeavor to execute orders promptly on receipt of same.

Los Angeles, Nov. 2. **HAMILTON & MENDERSON.**

SURE, OLD COMBS ARE VALUABLE

IF shipped to us for rendering. . . WE EXTRACT 99½ per cent OF WAX, and then pay you Highest Market Prices, or 2 cents additional in trade. . . YOU CAN'T APPROACH THAT FOR PROFIT. . . We need great quantities of Comb and Extracted Honey. . Write us.

Cincinnati, Ohio

The Best Time to Buy Supplies

The season just past has demonstrated more clearly than ever the necessity for being prepared for a honey-flow **BEFORE** it comes. If you wait until the season is upon you, the chances are that the greater part of the crop will be lost while you are impatiently waiting for supplies to arrive. It may seem a little early now to think of next season's honey harvest; but the fact of the matter is, this is just the time to order goods for next season.

We are beginning now to replenish our stocks. We shall have carload orders coming from the factory very often for the next few weeks. Special orders placed now can have just the attention they need, both here and at the factory, and you may have your goods sent in one of our cars, thereby saving on transportation charges. Regular stock will come straight to you from our warehouse in new unbroken packages, and you can put the goods together in your odd minutes, thereby saving the expense of extra help in the spring.

Our usual discounts for early orders apply again this season—5 per cent for cash orders sent in November, the discount diminishing one per cent per month as the season advances. These discounts mean a considerable saving, and you might as well take advantage of the highest by ordering now. No change of prices has as yet been announced, and you may, therefore, order from your present catalog. If your catalog has been mislaid, write us at once and we will send another.

If your season's crop of honey is not yet disposed of, we can give you a good price and handle it promptly. Send samples of extracted and full information as to containers, flavor, quantity, price, etc. We also handle comb honey.

Honey reports continued from page 2.

ZANESVILLE.—Honey is in very fair demand at the present time, with very little being offered by producers. For best grades of white comb, 18 to 19 is being received, with some concessions on quantity orders. White extracted in 60-lb. cans is quoted at 9 to 10. Producers are receiving for beeswax 28 cts. cash, 30 in exchange for supplies.

Zanesville, Nov. 8.

E. W. PEIRCE.

SCHENECTADY.—Both comb and extracted are good demand, and no accumulation of stock, which is rather unusual for November. In fact, buckwheat, both comb and extracted, is scarce, and we are unable to fill large orders. We quote fancy white, 16 to 17; No. 1, 14 to 15; other grades, 12 to 13; buckwheat, 12 to 14, according to quality; extracted, light, 8; dark, 8 to 9.

Schenectady, Nov. 1. CHARLES MACCULLOCH.

INDIANAPOLIS.—White comb sells at 18 cts. in ten-case lots; No. 1 white, one cent less. Amber comb in slow demand, and at lower figures. Best extracted sells at 11 to 12 cents in 5-gallon cans. Comb honey seems to be in excessive demand, and very little is now being offered by producers; and it is surmised that some are holding for higher prices; but at higher prices the demand would cease. Beeswax is in good demand, and producers are being paid 30 cents per pound.

Indianapolis, Nov. 2. WALTER S. POWDER.

ST. LOUIS.—The demand for choice new comb honey in this market is very good, with a supply equal to the demand. Southern comb honey of inferior quality is still moving very slowly. We quote fancy white comb honey at 16 to 17; No. 2 white at 15; amber, 13 to 15; dark, 9 to 11. The demand for extracted honey is also good. We quote light amber Southern, in barrels and half barrels, at 7; in five-gallon cans, 7½. Some white-clover California honey has come to this market recently, and is quotable nominally at 9 to 9½. Beeswax is in good demand at 30 cents. Inferior and impure sells for less.

St. Louis, Nov. 5. R. HARTMANN PRODUCE CO.

FIVE PER CENT DISCOUNT FOR NOVEMBER CASH ORDERS

To those who buy now for next season, sending remittance with the order during the month of November subject to the conditions named below, we allow 5 per cent discount.

This discount will apply on all articles listed in our regular catalog at current corrected prices to date except as follows:

Tinned wire, paint, Bingham smokers, Porter bee-escapes, glass and tin honey-packages, scales, bees and queens, bee-books, papers, labels, printed matter, bushel boxes, seeds, and specialties not listed in our general catalog. Where any or all of these articles in a general order do not exceed fifteen per cent of the whole order, the discount may be deducted from the whole order, including these items which are otherwise excepted.

A GENUINE SERVICE

"I believe," says an old subscriber, "that every time The Youth's Companion enters a home it does that home a genuine service." That describes the purpose of the publishers exactly. The paper is not filled with mischievous or idle thoughts to fill an idle hour. It provides healthy pastime, recreation that builds up. It is to the minds of eager and impressionable young people what sound athletics are to their bodies.

At a cost of less than four cents a week The Youth's Companion opens the door to a company of the most distinguished men and women in America and Europe. Whether they are revealing the latest discoveries in science, or describing great industrial achievements, or telling of their wanderings in strange corners of the world, or feeding the imagination with rare stories, they are giving Companion readers the best of themselves.

Seven serials at least will be published by The Companion in 1913, and nearly 200 other complete stories, in addition to some 50 special contributions, and a treasure-box of sketches, anecdotes, expert advice as to athletic sports, ideas for handy devices round the house, and so forth—long hours of companionship with the wise, the adventurous, and the entertaining. Announcement for 1913 will be sent with sample copies of the paper to any address on request.

Every new subscriber who sends \$2.00 for the fifty-two weekly issues of 1913 will receive as a gift The Companion Window Transparency and Calendar for 1913, the most exquisite novelty ever offered to Companion readers; also, all the issues of the Companion for the remaining weeks of 1912, free.

LEARN BEEKEEPING from the Beginning

"First Lessons in Beekeeping" and the . . . **\$1.00**
American Bee Journal, one year, Both for Only

"First Lessons in Beekeeping" is a 190-page book telling all that the beginner need know. . . . It has an attractive paper cover, and many illustrations.

"Doolittle's Scientific Queen-rearing," and the . . . **\$1.00**
American Bee Journal, one year, Both for Only

Doolittle's "Scientific Queen-rearing" book contains 126 pages, and is bound in leatherette with round corners. It tells in the clearest way possible just how the famous queen-breeder, Mr. G. M. Doolittle, rears the best of queen bees in perfect accord with Nature's way. As all know, Mr. Doolittle has spent some 40 years in rearing queens and producing honey. He has no superior as a queen-breeder. You can learn to rear fine queens by following his directions.

The beginner will want "First Lessons;" the older beekeeper should have "Scientific Queen-rearing." You will not regret it if you send your \$1.00 now and get either one of these books with the JOURNAL, as the JOURNAL itself is worth more than the total cost.

BEE SUPPLIES

**Glass and Paper Honey
jars, Hives, Comb and
Extracted Honey. . .**

An up-to-date stock of every thing used in connection with the bee and honey industry. On Bee Supplies I am offering liberal discounts for early orders, and I have all of the newest equipments, and very choicest in quality, that can be produced—Root Goods—with the advantage of having them shipped from Indianapolis. No one has ever endured an unfair deal from this house, and none shall ever occur; and when you place a trial order here I expect not only to have further orders from you, but that you will recommend my methods to your neighbors. Beekeeping is no longer an experiment, but a safe investment; and with modern equipments returns are fair, even during the poorer seasons.

WALTER S. POWDER:—Goods ordered from you arrived to-day as fine as silk. Thanks. I have had a poor year, and season now closing, with an average of 65 lbs. of comb per colony, and most of it spoken for at 25 cts. per section. Best wishes.

Knox, Ind.

JAS. ARNOTT.

If you are in need of finest honey to supply your local demands I can supply you.

I can use more beeswax on cash or trade basis, and you will find me prompt with returns.

I should like to place my catalog in your hands.

Walter S. Pouder, Indianapolis, Ind.

859 Massachusetts Avenue

A Business Proposition.

Your money in the savings bank is drawing 3 per cent, or at most 4 per cent interest. Here is an opportunity to invest it at 12 per cent—8 per cent more than it is now earning.

In most localities this has been a good season for honey and for making increase. Prospects were never better than for the coming season, and you are almost certain to be needing supplies in the spring. If you wait until the first of April or later, you must pay full catalog prices. If your order and remittance are sent in during November, a discount of 5 per cent will be allowed. Five per cent on money invested for five months is equivalent to 12 per cent per annum, figured for five months time. It looks good, doesn't it? Why not effect this saving by ordering now, and thus secure the peace of mind that will result from having your supplies all ready when you need them most? Your order can be sent in now, and the goods will be shipped at any time to suit your convenience.

Best goods, best service, best treatment, are insured by sending your orders to OHIO'S BEE-SUPPLY CENTER—special headquarters for bee-keepers in Ohio, West Virginia, and western Pennsylvania. If you haven't a catalog, ask for it.

"HOW THE WORLD SHOULD BE RUN."

As I have said before, amidst a great flood of kind words for my department in GLEANINGS once in a while we get a letter like the following:

You may discontinue GLEANINGS when my subscription expires. What I desire is a journal devoted to bees, and not one man's ideas on how the world should be run.

North Adams, Mass., Oct. 15. C. P. KIMBALL.

My good friend, while I thank you for your frank and outspoken words, I regret that I have given the impression to even one person that the world should be run entirely according to my ideas. I have certainly been unfortunate if I have failed to teach, not my ideas or opinions, but the teachings of Him who left his home in heaven to bring about "peace on earth and good will to men."

But after all, friend K., in writing editorials for your own paper have you not to a certain extent desired to let the world know "how the world should be run" from your standpoint? and is it not the duty and privilege of all to have some opinion as to how things should be managed?

A. I. R.

PUBLICATIONS ON

BEE CULTURE

Please use coupon below, checking the numbers of items wanted.

The pamphlets and booklets listed below are of more than ordinary interest:

- 1 **My First Season's Experience with the Honey-bee.** By the "Spectator," of the *Outlook*, of New York. A ten-page leaflet detailing the experiences of this well-known writer. You will read the leaflet through before you lay it down. Free.
- 2 **The Bee-keeper and Fruit-grower.** A 15-page booklet giving actual facts regarding the value of bees to fruit, and showing how bee-keeping may be doubly profitable to the fruit-grower. Fruit-growers are realizing as never before the necessity of having honey-bees in close proximity to their blossoming fruit. Free.
- 3 **Bee-keeping for Sedentary Folk.** A 24-page leaflet reciting the actual experiences of an amateur bee-keeper, showing what equipment is best, points derived, etc. Free.
- 4 **Catalog of Bee-keepers' Supplies.** Our complete catalog will be mailed free to any address on request.
- 8 **Habits of the Honey-bee.** By Dr. E. F. Phillips. A somewhat scientific handling of the habits and anatomy of the bee. Price 10 cts.
- 9 **How to Keep Bees.** A book of 223 pages detailing in a most interesting manner the experience of a beginner in such a way as to help other beginners. Price \$1.00 postpaid.
- 10 **The A B C of Bee Culture.** A complete encyclopedia of bees, of 576 pages, fully illustrated, \$1.50 postpaid; half leather, \$2.
- 11 **Cleanings in Bee Culture.** A 64-page illustrated semi-monthly magazine, the leading exponent of bee culture in this country. Ten cents per issue, but to new subscribers we will furnish it six months for 25 cts.
- 12 **Back-yard Bee-keeping.** Six interesting lessons written in readable newspaper style. Many facts to encourage the "City Bound" man or woman with the back-to-the-land longing. Free.
- 15 **Truth About Sweet Clover.** Interesting booklet of nearly 100 pages. Tells of value of sweet clover for honey, for plowing under, as fertilizers of the soil, and food for horses, cattle, swine, sheep, etc. Free.

The coupon below may be used as an order sheet by properly checking the numbers of items wanted and adding your signature, and remittance, if required.

| Alexander's Writings on Practical Bee Culture.
By the late E. W. Alexander, who conducted the largest apary in the United States. A wonderfully interesting discussion of bee-keeping in its broadest phases. Any one can understand it; 35 chapters, 95 pages. Paper bound, 50 cts. postpaid.

| A Year's Work in an Out-apary.....
By G. M. Doolittle. Packed full of most valuable information ever given to bee-keepers. A practical and interesting book by a very successful apiarist. Sale has reached nearly 5000 copies; 60 pages, paper bound; 50 cts. postpaid.

| The Townsend Bee Book.....
By E. D. Townsend. Written by one of the most progressive, successful, and extensive bee-keepers in the U. S., this book has been in great demand from the day of its announcement. Tells how to make a start with bees, and will greatly benefit beginners and experienced bee-keepers; 90 pages, paper bound. 50 cts. postpaid.

| Bee-keeping by Twentieth-century Methods, by J. E. Hand..... 50
The author shows not only how to control swarming, but how to treat foul brood without shaking, and discusses in a comprehensive way many other down-to-date apicultural problems and their solutions.

In combination with Gleanings in Bee Culture for one year any one of these books may be had for the price of Gleanings alone, \$1. Foreign postage 60 cts. extra. Canadian postage 30 cts. extra.

MISCELLANEOUS HAND-BOOKS.

5	A B C of Carp Culture, by Geo. Finley.....	25
7	A B C of Potato Culture, Terry** New edition, revised & enlarged; paper, 50c; cloth, 75c, mail 85c. This is T. B. Terry's first and most masterly work. It has really made a revolution in potato-growing, and has been reprinted in several foreign languages. By getting the ground in proper condition to grow great crops of clover, and turning this under, Terry succeeded, not only in getting more potatoes, but even better ones, and in producing them at less expense also, than by any plan or system be-	

Postage.]

[Price without postage

fore the time he began his experiments in 1885. The book has already passed through three editions of many thousands. It not only includes potato-growing in the United States, but in Bermuda, the Island of Jersey, and other warmer parts of the world where "new potatoes" are raised for the express purpose of getting the high prices in the cities during January, February, and March. The book also gives special attention to the different and best methods for preserving and keeping seed potatoes in the very best condition to plant in all these different localities.

5 | A B C of Strawberry Culture,** by T. B. Terry..
New edition, revised and enlarged; paper, 45c; cloth, 68c; by mail, 75c.

After Terry's potato-book had obtained such a kind reception from farmers, market-gardeners, and others, he was induced to give his plan of growing strawberries, as he did potatoes, by plowing under great crops of clover, and, like the potato-book, his writings gave a new impetus to strawberry-growing; in fact, some of his pupils declare that, aside from the picking, they can grow strawberries almost as cheaply per bushel as potatoes. By following Terry's teachings, thousands of people have not only been able to give their families but the whole wide world better strawberries, and more of them, than they ever saw before.

6	Asparagus Culture.....	40
6	Alfalfa Culture.....	40
8	Barn Plans and Out-buildings*.....	90
2	Celery for Profit, by T. Greiner**.....	25

The first really full and complete book on celery culture, at a moderate price, that we have had. It is full of pictures, and the whole thing is made so plain that a schoolboy ought to be able to grow paying crops at once without any assistance except from the book.

10 | Fruit Harvesting, Storing, Marketing, etc..... 75
It has been well said that it is an easier matter to grow stuff than to sell it at a proper price after it is grown; and many men fail, not because they are inexperienced in getting a crop, but because they do not know how to sell their crops to the best advantage. This is the first book of the kind we have had as an aid in selling. It not only tells all about picking, sorting, and packing, but gives all the best methods for storing for one or two days or a longer time. It also tells about evaporating and canning when there is a glut in the market. It discusses fruit packages and commission dealers, and even takes in cold storage. It is a new book of 250 pages, full of illustrations. Publisher's price, \$1.00.

| Farming with Green Manures, postpaid**..... 90
This book was written several years ago; but since competent labor has got to be so expensive, and hard to get, many farmers are beginning to find they can turn under various green crops cheaper than to buy stable manure, and haul and spread it—cheaper, in fact, than they can buy fertilizers. This book mentions almost all plants used for plowing under, and gives the value compared with stable manure. Some of the claims seem extravagant, but we are at present getting good crops, and keeping up the fertility, by a similar treatment, on our ten-acre farm.

7	Farm, Gardening, and Seed-growing**.....	90
10	Fuller's Grape Culturist**.....	1 15
5	Garden and Farm Topics, Henderson**.....	60
12	Gardening for Pleasure, Henderson**.....	1 10

While "Gardening for Profit" is written with a view of making gardening pay, it touches a good deal on the pleasure part, and "Gardening for Pleasure" takes up this matter of beautifying your homes and improving your grounds, without the special point in view of making money out of it. I think most of you will need this if you get "Gardening for Profit." This work has 246 pages and 134 illustrations. (Retail price \$2.00.)

12 | Gardening for Profit**..... 10
This is a late revision of Peter Henderson's celebrated work. Nothing that has ever before been put in print has done so much toward making market-gardening a science and a fascinating industry. Peter Henderson stands at the head, without question, although we have many other books on these rural employments. If you can get but one book, let it be the above. It has 376 pages and 138 cuts. (Retail price \$2.00.)

8 | Gardening for Young and Old, Harris**..... 90
This is Joseph Harris' best and happiest effort. Although it goes over the same ground occupied by Peter

Postage.] [Price without postage
Henderson, it particularly emphasizes thorough cultivation of the soil in preparing your ground; and this matter of adapting it to young people as well as old is brought out in a most happy vein. If your children have any sort of fancy for gardening it will pay you to make them a present of this book. It has 187 pages and 46 engravings.

3 | Grasses and Clovers, with Notes on Forage
Plants..... 20
This is by Henry A. Dreer, author of the book "Vegetables Under Glass" that has had such a large sale of late. This little book tells how six tons of grass has been grown to the acre, and gives much other valuable matter.

10 | Greenhouse Construction, by Prof. Taft** . . 1 15
This book is of recent publication, and is as full and complete in regard to the building of all glass structures as is the next book in regard to their management. Any one who builds even a small structure for plant-growing under glass will save the value of the book by reading it carefully.

12 | Greenhouse Management, by Prof. Taft**..... 1 15
This book is a companion to Greenhouse Construction. It is clear up to the times, contains 400 pages and a great lot of beautiful half-tone engravings. A large part of it is devoted to growing vegetables under glass, especially Grand Rapids lettuce, as well as fruits and flowers. The publisher's price is \$1.50; but as we bought quite a lot of them we can make a special price as above.

5 | Gregory on Cabbages, paper* 20
5 | Gregory on Squashes, paper*..... 20
5 | Gregory on Onions, paper*..... 20

The above three books, by our friend Gregory, are all valuable. The book on squashes especially is good reading for almost anybody, whether they raise squashes or not. It strikes at the very foundation of success in almost any kind of business.

| Handbook for Lumbermen..... 05

5 | Home Pork-making; 125 pages, illustrated..... 40
I think it will pay well for everybody who keeps a pig to have this book. It tells all about the care of the pig, with lots of pictures describing cheap pens, appliances, all about butchering, the latest and most approved short cuts; all about making the pickle, barreling the meat, fixing a smoke-house (from the cheapest barrel up to the most approved arrangement); all about pig-troughs; how to keep them clean with little labor; recipes for cooking pork in every imaginable way, etc. Publisher's price is 50 cents, ours as above.

15 | How to Make the Garden Pay**..... 1 35
By T. Greiner. Those who are interested in hot-beds, cold-frames, cold green-houses, hothouses, or glass structures of any kind for the growth of plants, can not afford to be without the book. Publisher's price \$2.00.

10 | How to Keep Well and Live Long..... 90

The above book by T. B. Terry is, in my opinion, destined to relieve more pain, sickness, and death than any other book in the whole world that has ever come to my knowledge. This is pretty strong language, I admit; but since Mr. Terry commenced, years ago, to urge the importance of pure air, pure water, and a simple diet of good simple food in moderate quantities, the whole wide world, doctors included, seems to be gradually falling in with him. Of course, other good and wise men commenced a similar crusade for better health long before Terry did; but he seems to have a happy faculty of getting hold of people and keeping their attention. After you once start in with the book you will be pretty sure to read it to the end, and you will ever after be a better and a happier man or woman for having read it. We have a special low price for clubbing with GLEANINGS—that is, both for \$1.50. If you have already paid for GLEANINGS a year or more in advance you can have the book for 75 cents postpaid. Since it first came out, only a short time ago, we have sold nearly 1000 copies.

3 | Maple Sugar and the Sugar-bush**..... 25

8 | Manures; How to Make and How to Use
Them; in paper covers..... 30

6 | The same in cloth covers..... 65

5 | Nut Cultivist, postpaid..... 1 25

3 | Onions for Profit**..... 40

Fully up to the times, and includes both the old onion culture and the new method. The book is fully illustrated, and written with all the enthusiasm and Even if one is not particularly interested in the busi-

Postage.] [Price without postage
ness, almost any person who picks up Greiner's books will like to read them through.

8 | Practical Floriculture, Henderson*..... 1 10

10 | Small-Fruit Culturist, Fuller 75

2 | Experiments in Farming. By Waldo F. Brown. 08

This little book ought to be worth its cost for what is said on each of the four different subjects; and the chapter on cement floors may be worth many dollars to anybody who has to use cement for floors, walks, or anything else. In fact, if you follow the exceedingly plain directions you may save several dollars on one single job; and not only that, get a better cement floor than the average mason will make.

10 | Our Farming, by T. B. Terry**..... 75

Same, paper cover, postpaid..... 50

In which he tells "how we have made a run-down farm bring both profit and pleasure."

If ordered by express or freight with other goods, 10c less.

10 | Talks on Manures* 1 35

By Joseph Harris. Written conversational style, which makes it very interesting reading. It covers the subject very completely; contains numerous analyses of manures and comparative tables. The use of technical language is avoided, which makes the book of greatest value to the practical farmer. A book of 366 pages, nicely bound in cloth.

10 | The Dollar Hen..... 90

The above book will be clubbed with GLEANINGS for one year at \$1.50; or if you have already subscribed a year or more in advance you can have the book postpaid for 75 cents.

My opinion is, that "The Dollar Hen" is not only one of the best books on poultry that we have at the present time, but it is worth nearly as much as a dozen other books. Perhaps this is extreme, but we have very few books that are strictly up-to-date, and still fewer that pitch right into the superstitions and humbugs now scattered all through our poultry books and journals.

5 | The New Rhubarb Culture**..... 40

Whenever apples are worth a dollar a bushel or more, winter-grown rhubarb should pay big. It does not require an expensive house nor costly appliances. Any sort of cellar where it will not freeze is all right for it; and the small amount of heat necessary to force the rhubarb costs very little. The book is nicely bound in cloth, full of illustrations, mostly photos from real work, 130 pages. Every market-gardener should have this book, for the lessons taught indirectly, in regard to forcing other crops besides rhubarb. Publisher's price 50c.

5 | Tile Drainage, by W. I. Chamberlain..... 35

Fully illustrated, containing every thing of importance clear up to the present date.

The single chapter on digging ditches, with the illustrations given by Prof. Chamberlain, should alone make the book worth what it costs, to every one who has occasion to lay ten rods or more of tile. There is as much science in digging as in doing almost any thing else; and by following the plan directed in the book, one man will often do as much as two men without this knowledge.

5 | Tomato Culture 35

In three parts. Part first.—By J. W. Day, of Crystal Springs, Miss., treats of tomato culture in the South, with some remarks by A. I. Root, adapting it to the North. Part second.—By D. Cummins, of Conneaut, O., treats of tomato culture especially for canning-factories. Part third.—By A. I. Root, treats of plant-growing for market, and high-pressure gardening in general.

3 | Winter Care of Horses and Cattle..... 25

This is friend Terry's second book in regard to farm matters; but it is so intimately connected with his potato-book that it reads almost like a sequel to it. If you have only a horse or a cow, I think it will pay you to invest in a book. It has 44 pages and 4 cuts.

8 | What to Do, and How to be Happy while Do-
ing It..... 65

The above book, by A. I. Root, is a compilation of papers published in *Gleanings in Bee Culture*, in 1886, '7, and '8. It is intended to solve the problem of finding occupation for those scattered over our land out of employment. The suggestions are principally about finding employment about your own homes. The book is mainly upon market-gardening, fruit-culture, poultry-raising, etc. Illustrated, 188 pages, cloth.

8 | Same, paper covers..... 40

QUIRIN-THE-QUEEN-BREEDER, Bellevue, O.

WEARING THE "BRAND."

I want to thank you for what I have gathered from your contributions from time to time that has encouraged me in the way of the higher Christian citizenship. My father and grandfathers on both sides were local preachers in the Methodist church, and that mantle has descended on me. It is a grand thing just to wear the *brand*, outside of what one may accomplish in his activities for God.
Muncie, Ind., Sept. 18. W. W. TUTTLE.

"THE BEST 80 ACRES IN INDIANA," ETC.

I am a poor man whom the storms of life have hit very hard. I read all of GLEANINGS, sometimes over and over; but the best of all is Our Homes. I have read borrowed numbers for years back, and have obtained an abundance of good from them; but the grandest of all is in the Home talks of August 15. As I finished your wonderful thought structure on the three texts I said to myself, "I am a poor man; but I would not part with this for the best 80 acres in Indiana." God bless you, and make you even more useful.
Westfield, Ind., Aug. 21. A. L. BEALS.

SPECIAL NOTICES

A. I. ROOT

ADVERTISING TOBACCO CULTURE FOR THE STATE OF FLORIDA, ETC.

Dear Bro. Root:—Look out! look out! I'm after you again with a sharp stick. You don't know how pleased I was to see your roast of the cigarette business as well as your condemnation of the growing of tobacco (page 677, Oct. 15). Think, then, how amazed I was to see tobacco-growing advertised (page 13, advertising matter, Seaboard Airline Railway, same issue). I often feel like saying amen to your articles, and slapping you heartily on the back by way of encouragement; and I trust that you will give your advertisers to understand that, if they wish to continue using your columns, they must avoid the very appearance of evil or questionable advertisements.

Lynn Valley, Ont.

ARTHUR LAING.

Many thanks, old friend, for your good-natured criticism. You are certainly right. If we protest against teaching our Ohio boys how to grow tobacco, to be consistent we ought to remember the good boys down in Florida as well. I think our good friends of the Seaboard Air Line will be quite willing to leave out the tobacco.

TYPHOID FEVER, THE HOOKWORM, AND EVEN ABSINTH RULED OUT, BUT NOT A WORD OF RECOGNITION IN REGARD TO THE RUM TRAFFIC.

Dear Uncle Amos:—A government under capitalism will ever sacrifice its privilege to make money from the vices of the weak and foolish. Our government will bear all the limelight we can throw on it, as is proven by past exposures. Something like fifteen years ago, when the People's party was working, I read the following. I quote from memory: "This liquor is placed in bond when first manufactured, to enable it to get at its best, and that the manufacturers may not be out of capital while waiting the government advances."

In other words, for which I ought, perhaps, to apologize for its lack of that "repose which marks the caste of Vere de Vere," this helljuice is bottled and barreled until it gets "good" (and hellish), and then released to do its devilish work. Do you wonder at the lack of faith in Christian civilization which is spreading over the world? If you do, consider how Christian (and civilized) England has fastened on China the curse of opium. I got this from a missionary's letter published years ago, either in a Sunday-school paper or missionary paper. I have forgotten the paper, but the statement has been confirmed later in our magazines.

Don't be angry now, like those Blatherskites and Socialists, for it is really a difficult problem to make claims on the world multiply until the end of time, and all good governments are doing their best at it. Well, this much has been done at least: The curse pronounced on man, "By the sweat of thy face shalt thou eat bread," is removed, for a favored few governments will sacredly guard investments, if it does not life, liberty, and the temptations of the young or the weak from vice. I enclose a clipping from the *Appeal to Reason*, which you may find time to read.

Exeter, Cal., Oct. 24.

J. B. COLTON.

Here is the clipping from the *Appeal to Reason*—a periodical that I do not often take the time to look at very much; but before giving this clipping, however, I wish to mention that my old pastor, Rev. A. T. Reed, said one morning in his prayer that he thanked God for his enemies as well as friends, because his enemies would tell him his faults, while his friends would not. Perhaps the *Appeal to Reason*, along this

same line, may tell us of the faults of our nation and government. I think I will take the liberty to head it:

THEY SHALL BEAT THEIR SWORDS INTO PLOWSHARES, . . . AND NATIONS SHALL NOT LEARN WAR ANY MORE.

The latest score in the great competitive game of building battleships is made by England, who announces that she will construct three more "Dreadnoughts." To-morrow Germany may be expected to come back with a plan for four more. Then it will be the move of the United States.

In the pictures displayed to attract boys to the navy a "Dreadnought" is simply a gigantic ship with smooth, beautiful lines.

But a "Dreadnought" is not built to lend beauty to the landscape, except when it is used as bait for the young. It is built to kill human beings by wholesale. It is, perhaps, the most perfect machine that the age of machinery has produced. In all the factories of the world full of factories there is nowhere else so marvelously ingenious a piece of mechanism.

On its construction the best minds of the age have been concentrated for years. The highest rewards have been held out to those who could invent some improvement—some new device that would make it more effective for its terrible purpose.

If to-day some person could devise a method by which the whole great wonderful instrument of death could be sent to the bottom with the pressure of a finger, he would be the only one who would receive greater rewards than the one who should discover a method by which this same instrument could be made still more terribly destructive.

Every portion of this marvelous mechanism is devised with but one end in view—*destruction of human life*. Its great guns are carefully built up into the most perfect pieces of metal known to man, solely in order that they may hurl life-taking missiles through hardened steel to reach the bodies of men behind those steel walls. Every device of steam and electricity that fill the most hidden corners of the whole murderous machine is constructed and cared for and brought to the highest state of perfection only that human bodies may be torn to fragments, that widows and orphans may be created, and the fishes fed with mangled human flesh.

Here capitalism reaches its climax. It pours out its energies most effectively and most freely for purposes of *murderous destruction*.

The above would look as if not only England and Germany but the United States, were getting a great way off from the beautiful sentiment in the text I have quoted. The vast sums of money needed for these great warships is taken from the hard workers and tillers of the soil; and, if I am correct, it is taking it also without their consent or approval. But, thank the Lord, the "voice of the people" is beginning to be heard and *considered*.

SOME VERY KIND WORDS AND—SOMETHING ELSE.

Dear Mr. Root:—First of all I want to say, may God bless you in all ways, and open the windows of heaven and pour out such blessings of the Holy Spirit upon you that you can say, "Thou anointest my head with oil; my cup runneth over. Surely goodness and mercy have followed me all the days of my life."

I have never met you, and, no doubt, never shall; but I should like to very much, and clasp the hand of one of God's servants who is not afraid to speak the truth without a veil over it.

Your mention of the brother and sister, p. 567, Sept. 1, interested me particularly. Just such an instance happened with a railroad man and his own daughter. Upon his entering the room she was greatly surprised but rejoiced to see him, expecting the landlady (?) back with promised "cream and cake." She said, "Why, papa! I thought you were on your run;" but all he could say was, "O my God! my own daughter."

"Why, papa! aren't you glad to see me? and isn't this a nice place?" For an answer he took her by the hand and said, "Come; let's go home." He said it nearly killed him, but caused him to see it *might* have been *another* man, and *his* a ruined girl and home. He reformed, and now has three children—the eldest a boy 20; the next a girl 18, and a boy 14.

You spoke of tobacco. I am sure it is the beginning of downfall and ruin. I never yet saw a real user that had very much real snap and vim to him, and who amounted to very much in life. He may accumulate wealth; but what is that? So do thieves and thugs. If our own minister here would, when preaching for converts (and that ought to be every sermon) simply *preach, teach, and live a pure, clean religion*, such as Christ taught, and as I firmly believe intended to be taught, we women wouldn't have to go to church and pull our skirts away, or, if no room elsewhere, sit over a pool of tobacco spit. Our minister here a few evenings ago, during prayer, had to stop to spit. He even keeps it in his mouth during service, and three times during the sermon hawk and spit on the pulpit carpet, and rub it in with his shoe. Some of our lady (?) members use snuff and tobacco, and spit on the floor at church. God help us that we may not sit by with folded hands and allow these things to exist. I have quit going to hear him preach, for the trustees will sit there and know it all, and still not a word. How hard to teach purity at home, and send our children to hear such things, and see our churches defiled!

Oct. 30.

The good sister who sends us the above letter wishes to have her name withheld, for obvious reasons. In regard to a minister who uses tobacco, she should not on that account quit going to church. I would not do that, nor advise it. Let this good sister, who, I am sure, has grace and wisdom (and if not it will be given her in answer to prayer), go to her pastor, see him alone, and tell him gently the effect of this habit on the young men in their community. Tell him this, which he can get from this journal in *Our Homes*, that not only railroad companies have declared against the use of strong drink and tobacco, but great business houses as well (see something in regard to this matter in another column) have come to the front, demanding clean men without these dangerous and filthy habits. I am sure the clergy of our land will not be backward in reforms along this line. My impression is that there are but very few ministers in any of our evangelical churches now who are users of tobacco. It debars a man entirely from entering the Methodist ministry. Some very good *old* ministers, I know, who learned the tobacco habit early in life, are still preaching; but they not only have to put up with a poor parish, but they generally get poor pay. The minister who uses tobacco is generally marked down several notches in salary provided he is hired at all. Our stenographer just informs me of a minister (of a good-sized church) whom he lately heard in Cleveland, who now uses tobacco, much against the wishes of his flock. Some of the members have tried to induce him to resign, but he stubbornly refuses, and quite a good

many of his congregation absent themselves, refusing to hear such a man preach. As a matter of course, he is what we might term a "high liver" in other respects, attending questionable places of amusement, card-playing, etc.

A KIND WORD INDEED FOR THE HOME PAPERS.

Dear Mr. Root:—My son takes your journal. The other day I picked it up and thought I would see if I could learn something about bees, and in looking through its pages I saw a part entitled "Our Homes." I read with delight and blessing to my soul your sermon on Matt. 12:46-50. It gave me a little better glimpse of my Savior, and, in truth, I can say he is the greatest asset that has ever come into my life. I enjoyed this article so much I looked up another, and I read and saw how you trusted God about the money, and then about the smoker. No, indeed, do not pay any attention to your critics. They have not been born into his kingdom; are blind as to spiritual things which must be spiritually discerned. The Lord knew at the start just what difficulties were going to beset you in regard to the smoker proposition. In the first place, he knew he could depend upon you. He knew when he impressed you to do a thing, and you were satisfied it was from him, that you would do it without quibble. He knew you would quit making the smoker you started to make, and therefore he knew just what you would be up against. He knew, also, what prayer you would also offer up to him, because you prayed in the Spirit; so, long before it was made, he began preparations for its answer. Then when you made the request the answer was nigh at hand. Bless the Lord, for he is good. Indeed, it is sweet to trust in Jesus, knowing that "he careth for you," and that all things shall work together for good to those that love the Lord and are chosen according to his purpose. May the Lord bless you, brother Root, and cause you to write many more sermons.

Denair, Cal., Sept. 13.

J. T. SNIDER.

I should hardly dare to print the above letter with its strong language of encouragement were it not that I am sure that the writer means to commend the Lord Jesus Christ and *not* your humble servant, who has been graciously permitted to speak for him a few words.

Convention Notices

The annual meeting of the Pecos Valley branch will be held at the Dickens school building, second door south of Fourth Street, on Pennsylvania Avenue, Roswell, New Mexico, Nov. 21, 1912, at 9 A. M., and with continued sessions. There is very important business to come before the association. Let all members be on hand promptly. Each and every beekeeper in the Pecos Valley and State are invited to be present.

At 2 P. M. of said date a session will be held at which all fruit-growers are invited to meet with us—especially those orchardists who believe the honey-bee and other insects are of benefit to fruit-growing.

HENRY C. BARRON, Secretary.

R. B. SLEASE, President.

WISCONSIN BEEKEEPERS' ASSOCIATION.

The thirty-fourth annual convention of the Wisconsin State Beekeepers' Association will be held at the Capitol building, Madison, December 17 and 18, beginning at 10 A. M., Tuesday.

As usual an interesting program, consisting of papers and questions, will be presented for discussion. Important legislation, to be presented to the next legislature, will be discussed.

The Northwestern Beekeepers' Association holds its annual convention at Chicago, December 19 and 20, thus giving all members an opportunity to attend both conventions at very little additional expense.

Headquarters for the beekeepers will be Simons Hotel. To secure a room you must write in advance, enclosing \$1.00.

Augusta, Wis., Nov. 9.

GUS DITTMER, Sec.

Quality and Service

This combination is an especially strong one when applied to BEE SUPPLIES, and we are prepared to give our customers both of these to the highest degree.

The standard set for ROOT'S BEE SUPPLIES was set long ago, and has been carefully maintained for years. Nothing but the best of material is put into our goods, and the workmanship is beyond criticism. Special machinery is being constantly added to make each class of work turned out even more nearly perfect and better finished. From the time the lumber goes into the factory until the packages are marked for shipment the utmost care is used, to be sure that every thing is just right—not "good enough," but the best that can be made. It costs just a little more in the first place to get such supplies; but it is a good investment from every standpoint. Cheap goods are cheap, and always will be. ROOT'S GOODS are as low in price as is consistent with the best materials and workmanship, and you forget the price in the satisfaction of having goods that you can absolutely depend upon, that fit together and are durable.

Early Orders

In accordance with our usual custom we are offering early-order discounts this season. This discount is 5 per cent for orders received during the month of November, and diminishes 1 per cent per month thereafter. It will pay the average beekeeper well to take advantage of this discount. He not only saves a considerable cash outlay, but there is much to be gained otherwise by ordering early. We are not so busy here at the factory as we shall be later in the season. While we always try to give the best of attention to every order at any time, early orders for special good or special packages will naturally have a little better attention than if received during the rush of a very busy season. Then, too, the beekeeper who gets his goods in early will usually have time during the winter to put these goods up ready for use himself, and save quite an expenditure for extra help for this work. The season may open unusually early in almost any locality; and if the goods are on hand all ready for use, no time is lost in the spring, when every day counts. Many good honey crops have been entirely lost by lack of foresight in these things.

If you have mislaid your catalog, send for another. Most 1912 prices will apply until the new catalogs are out. The same careful attention given to equipment for small apiaries as to large orders for quantity lots of goods.

Save the Dealer's Big Profits on Lumber and Millwork !

Write today for our Grand Free Catalog of 5000 Building Material Bargains.

Your new house will cost you 50 per cent less if you buy the materials here. We own and operate an immense Millwork and Building Material Plant, and sell the material for complete, modern houses, in all latest styles of architecture, **direct to home builders** at tremendous reductions from dealer's prices. We have our own lumber shipping yards in St. Louis. We ship wherever railroads go. **Quality, Safe Delivery and Satisfaction guaranteed.**

We have shipped millions of dollars' worth of building material to customers in every part of the United States. Thousands testify to the high quality, low prices and wonderful values.

Choose from 50 Plans of Fine Modern Homes

We offer our customers their choice of 50 different plans of frame, brick or stucco houses, cottages and bungalows **absolutely free of cost.** Plans made by America's foremost architects—finest you ever saw. Each plan has been built hundreds of times. Cost will never exceed estimate if you build from Gordon-Van Tine plans. We can ship all the materials to build from any of these plans on 48 hours' notice.

\$300 to \$500 or More Saved on Materials Alone

We sell you windows, doors, mouldings, frames, porch and stair materials, flooring, mantels, etc., at the same price the dealer pays. No "middle" profits added. Buy from us and save several hundred dollars on materials for a house. By using our plans you also save \$50 to \$100 in architects' fees.

Greatest of All Catalogs Free

Our big, new illustrated building material catalog is the greatest thing of the kind ever printed. Over 5000 bargains in high-grade, guaranteed millwork, lumber and building material. Write at once for **FREE** copy.

The Youth's Companion

The contents for a year — stories, articles, and other matter — if published in book form, would make 30 volumes of the best and most varied reading.

There will be seven splendid serials and 250 other stories; there will be articles by Speaker Champ Clark of the House of Representatives, by Governor Harmon of Ohio, by Admirals and Generals, and other distinguished men and women. You can get a full account of them in the Announcement for 1912, which is sent to any address free.

**HOW TO
GET THE
FREE
ISSUES**

EVERY NEW SUBSCRIBER who at once cuts out and sends this slip (or mentions this publication) with \$2.00 will receive free **ALL THE REMAINING 1912 ISSUES** including the beautiful Holiday Numbers for Thanksgiving and Christmas; also free **THE COMPANION'S WINDOW TRANSPARENCY AND CALENDAR** for 1913, the most exquisite souvenir ever given Companion readers.

THEN THE YOUTH'S COMPANION to January, 1914—long hours of companionship with the wise, the adventurous, the entertaining—all for less than 4 cents a week. GM 90

THE YOUTH'S COMPANION, BOSTON, MASSACHUSETTS

Cleanings in Bee Culture

VOL. XL. DEC. 1, 1912, NO. 23.

Cleanings for 1913

The six special numbers for 1912 were received with such enthusiasm that we have decided to outdo our efforts of last year, and we take pleasure, therefore, in presenting the following special numbers for 1913:

Jan. 1--Beginners' Number

Experiences and mistakes of beginners. Beginners' questions. An experience with a swarm of black bees.

Feb. 1--Old-timers' Number

It is a matter of great pride to us that nearly sixty of our present readers were with us back in the "Windmill Days," more than forty years ago, when GLEANINGS first made its feeble start. We have letters from these men that are intensely interesting to the beekeeper of to-day, and we shall publish them. We intend this issue to be a glimpse of beekeeping in by-gone days. In this historical number we hope to show something of the drawbacks that had to be met when beekeeping was in its infancy. Many lessons may be learned by reading history.

March 1--Women's Number

There have been repeated requests for a special number devoted to beekeeping for women. There were many requests for this last year, and we are at last prepared to furnish what we believe is a splendid array of material from

our beekeeping sisters who have made a success with their bees. There are thousands of other women who would be glad to take up bees were it not for their natural timidity, or their fear of stings. This number will serve, not to point out an easy path toward success, but to show how difficulties in the way may be surely overcome.

April 1--Out-apiaries

Ever since our special number on automobiles was out we have received complimentary letters regarding it, and requests for more particular information of the same kind. In this special number we propose to have a full discussion of the automobile as used in out-apiary work, both for hauling and for going to and from the yard. In this number there will also appear many articles regarding the equipment used at out-apiaries as outlined in our editorial, page 610, October 1.

May 1--Swarming and Increase In the North, South, East, and West

This is a subject that is of vital interest to every beekeeper in every locality, and no list of special subjects would be complete

without it. We shall make an effort this year to have articles from all parts of the country, so that no one can complain that the directions given do not apply in his special locality.

July 1--Marketing Honey

We already have a number of splendid articles from experts in this line. Beekeepers are waking up to the possibilities of selling their crop as never before, and those who have heretofore sold at any old price are beginning to realize the mistake they are making. This number will be full of practical suggestions for profitably disposing of the crop.

Aug. 1--Beekeeping as a Recreation

In addition to the army of men and women who are making beekeeping their sole occupation, there is a rapidly increasing number of professional men, lawyers, doctors, ministers, teachers, etc., who find beekeeping a delightful avocation. In this special number some of them will tell why beekeeping is so admirably suited for this purpose. Some "big men" are going to contribute to this number.

We are proud of the fact that GLEANINGS has never had to go begging for material. We have never seen the time yet when we did not have more good articles on hand than we could possibly use. Nevertheless, in spite of this, we are going to solicit this year a large number of the special articles mentioned above. We are not merely going to fill up our pages; we are going to try to give you the very best that we can obtain. Is all this only an introduction to prepare the way for an announcement of a higher subscription rate? It is not. The price remains the same—one dollar per year.

Prepare for Next Season and Save 4 Per Cent on all "falcon" BEE SUPPLIES

"FALCON" hives are made of the best lumber obtainable for the purpose, the knotted parts being cut out, the waste pieces being used in a line of toy blocks requiring only small cuts. This leaves a clear surface; that's why we have the reputation of making the finest supplies in the country.

"FALCON" foundation. We make it in our own plant. The best grades of pure beeswax only are used. Special prices for quantities.

Our old customers who use special-size sections, foundation, frames, etc., should order now. Later, when the rush is on, it's hard for us to take care of you.

A copy of Simplified Beekeeping postpaid for the asking.

We can give orders prompt attention. We guarantee satisfaction. A trial will convince you.

Dealers Everywhere.

Do You Love SWEETS?

Ralph Waldo Emerson Did

He said you can attain to royalty by loving sweets.

"He who knows what SWEETS . . . are in the ground, the waters, the plants, the heavens, and how to come at these enchantments, is the rich and royal man."

"HOW to come at these?"

Aye, there's the rub.

How many people miss them! and perhaps some of these many, strange to say, *keep bees*

Want to know how?

Send \$1.00 for a year's subscription to

The Guide to Nature

Arcadia, Sound Beach, Conn.

It is edited by Edward F. Bigelow, a sweets extractor—in other words, "a bee-man" and a naturalist.

PROTECTION HIVE

The best and lowest-priced double-wall hive on the market. This hive has $\frac{3}{4}$ material in the outer wall, and is not cheaply constructed of $\frac{1}{2}$ material as are some other hives on the market. Packing or dead-air space as you prefer. Remember, winter is approaching. Get your bees into comfortable quarters before it is here.

Send for a catalog.

A. G. WOODMAN CO., GRAND RAPIDS, MICH.

HONEY MARKETS

The prices listed below are intended to represent, as nearly as possible, the average market prices at which honey and beeswax are selling at the time of the report in the city mentioned. Unless otherwise stated, this is the price at which sales are being made by commission merchants or by producers direct to the retail merchants. When sales are made by commission merchants the usual commission (from five to ten per cent), cartage, and freight will be deducted; and in addition there is often a charge for storing by the commission merchant. When sales are made by the producer direct to the retailer, commission and storage and other charges are eliminated. Sales made to wholesale houses are usually about ten per cent less than those to retail merchants.

EASTERN GRADING RULES FOR COMB HONEY.

FANCY.—All sections well filled, combs straight, firmly attached to all four sides, the combs unsoiled by travel-stain or otherwise, all the cells sealed except an occasional one, the outside surface of the wood well scraped of propolis.

A No. 1.—All sections well filled except the row of cells next to the wood; combs straight; one-eighth part of the comb surface soiled, or the entire surface slightly soiled; the outside surface of the wood well scraped of propolis.

No. 1.—All sections well filled except the row of cells next to the wood; combs straight; one-eighth part of the comb surface soiled, or the entire surface slightly soiled.

No. 2.—Three-fourths of the total surface must be filled and sealed.

No. 3.—Must weigh at least half as much as a full-weight section.

In addition to this the honey is to be classified according to color, using the terms white, amber, and dark; that is, there will be "Fancy white," "No. 1 dark," etc.

NEW HONEY-GRADING RULES ADOPTED BY THE COLORADO STATE BEEKEEPERS' ASSOCIATION, DECEMBER 13, 1911.

FANCY WHITE.—Sections to be well filled, comb firmly attached on all sides and evenly capped, except from the outside row next to the wood. Honey, combs, and cappings white, and not projecting beyond the wood. Wood to be well cleaned; no section in this grade to weigh less than 13½ ounces.

No. 1.—Sections to be well filled, combs firmly attached on all sides and evenly capped, except the outside row next to the wood. Honey white or very light amber; comb and cappings from white to slightly off color. Combs not projecting beyond the wood; wood to be well cleaned; no section in this grade to weigh less than 13½ ounces.

CHOICE.—Sections to be well filled; combs firmly attached; not projecting beyond the wood, and entirely capped, except the outside row next to the wood. Honey, comb, and cappings from white to amber, but not dark; wood to be well cleaned; no section in this grade to weigh less than 12 ounces.

No. 2.—This grade is composed of sections that are entirely capped, except row next to wood, weigh-

ing from ten to twelve ounces, also of such sections that weigh 12 ounces or more, and have not more than 50 uncapped cells all together, which must be filled. Combs and cappings from white to amber in color, but not dark; wood to be well cleaned.

EXTRACTED HONEY.—Must be thoroughly ripened; weigh 12 pounds per gallon. It must be well strained, and packed in new cans. It is classed as white, light amber, and amber.

STRAINED HONEY.—This is honey obtained from combs by all other means except the centrifugal extractors, and is classed as white, light amber, amber, and dark; it must be thoroughly ripened and well strained. It may be put up in cans that previously have contained honey.

BOSTON.—We quote fancy white comb at 16 to 17; No. 1 white comb, 15 to 16; fancy white extracted, 10 to 11; light amber, 9 to 10; amber, 8; beeswax, 30.

Boston, Nov. 20.

BLAKE-LEE CO.

KANSAS CITY.—The supply of both comb and extracted honey is large, the demand fair. We quote No. 1 white comb, 24-section cases, \$3.25; No. 2 ditto, \$3.00; No. 1 amber ditto, \$3.00; No. 2 ditto, \$2.75; extracted white, per lb., 8½ to 9. Beeswax, 25 to 28.

C. C. CLEMONS PRODUCE CO.

Kansas City, Mo., Nov. 18.

DENVER.—We quote comb honey in a jobbing way at the following figures: No. 1, \$3.05; choice, \$2.90; No. 2, \$2.70. Extracted honey, white, 9; light-amber, 8c; strained, 6½ to 7. We pay 26 in cash and 28 in trade for clean yellow beeswax delivered here.

THE COLORADO HONEY-PRODUCERS' ASSOCIATION.

Denver, Nov. 9.

ZANESVILLE.—There is still a pretty good demand for honey, especially comb. Very little is being offered by producers at the present time. For best grades of white-clover comb, 18 to 19 is being received, with prices slightly lower on quantity orders. For best white extracted in 60-lb. cans, 9 to 11 is asked, according to quantity. Producers are receiving for beeswax 28 cts. cash, 30 in exchange for supplies.

Zanesville, O., Nov. 18.

E. W. PEIRCE.

ST. LOUIS.—There is a good demand for new comb honey in this market, especially for the better grades. Fancy white will bring from 16 to 17 cents per pound. No. 2, 15; light amber, 12 to 14; dark, 9 to 11. Choice white California honey is offered here at \$3.40 to \$3.50 per case for No. 1; No. 2, \$3.25. Dark and inferior honey is not in demand, and is very difficult to sell. The demand for extracted honey is only fair. Light-amber Southern, in barrels and half-barrels, will bring 7 cents; in five-gallon cans, 7½. The receipts of white-clover honey and California honey are still small, and could be quoted at 9 to 9½. Beeswax is in good demand at 30 cents for prime. Inferior and impure sells for less.

St. Louis, Nov. 19. R. HARTMANN PRODUCE CO.

SURE, OLD COMBS ARE VALUABLE

IF shipped to us for rendering. . . WE EXTRACT 99½ per cent OF WAX, and then pay you Highest Market Prices, or 2 cents additional in trade. . . . YOU CAN'T APPROACH THAT FOR PROFIT. . . We need great quantities of Comb and Extracted Honey. . Write us.

The Best Time to Buy Supplies

The season just past has demonstrated more clearly than ever the necessity for being prepared for a honey-flow **BEFORE** it comes. If you wait until the season is upon you, the chances are that the greater part of the crop will be lost while you are impatiently waiting for supplies to arrive. It may seem a little early now to think of next season's honey harvest; but the fact of the matter is, this is just the time to order goods for next season.

We are beginning now to replenish our stocks. We shall have carload orders coming from the factory very often for the next few weeks. Special orders placed now can have just the attention they need, both here and at the factory, and you may have your goods sent in one of our cars, thereby saving on transportation charges. Regular stock will come straight to you from our warehouse in new unbroken packages, and you can put the goods together in your odd minutes, thereby saving the expense of extra help in the spring.

Our usual discounts for early orders apply again this season—4 per cent for cash orders sent in December, the discount diminishing one per cent per month as the season advances. These discounts mean a considerable saving, and you might as well take advantage of the highest by ordering now. No change of prices has as yet been announced, and you may, therefore, order from your present catalog. If your catalog has been mislaid, write us at once and we will send another.

If your season's crop of honey is not yet disposed of, we can give you a good price and handle it promptly. Send samples of extracted and full information as to containers, flavor, quantity, price, etc. We also handle comb honey.

Honey reports continued from page 2.

NEW YORK.—Comb honey keeps in fair demand for all grades at unchanging prices. The various grades of white honey are still coming in, while buckwheat seems to be extremely short. Extracted honey is in fair demand, with sufficient supplies of all grades except California white sage, which seems to be scarce this season. Prices run the same. Beeswax is quiet at 30 to 31.

New York, Nov. 18. **HILDBRETH & SEGELKEN.**

INDIANAPOLIS.—White comb sells at 18 cts. in ten-case lots; No. 1 white, one cent less. Amber comb in slow demand, and at lower figures. Best extracted sells at 11 to 12 cents in 5-gallon cans. Comb honey seems to be in excessive demand, and very little is now being offered by producers; and it is surmised that some are holding for higher prices; but at higher prices the demand would cease. Beeswax is in good demand, and producers are being paid 30 cents per pound.

Indianapolis, Nov. 20. **WALTER S. POWDER.**

SCHENECTADY.—Our market is nearly bare of all grades of honey. There is a small stock of clover which will be cleaned up before the holidays, but no buckwheat is in sight. This is a desirable condition, for there is very little demand after Dec. 1, and we also note that comb honey is commencing to candy again this season, and in that condition it is unsalable except at a very low price. Prices are unchanged from our last report.

Schenectady, Nov. 20. **C. MACCULLOCH.**

LIVERPOOL.—Since we last reported to you we have had a better demand for honey. There have been fair sales of Chilean, amounting to about 1.0 barrels, at \$7.68 to \$9.12 for pile X; \$7.20 to \$7.44 for pile 1; \$6.72 to \$6.96 for pile 2; \$6.24 to \$6.72 for pile 3, and \$6.00 per cwt. for No. 2 pile. There have also been fair sales of Californian at \$10.20 to \$11.28; and of Jamaican at \$6.58 to \$8.16. There is a good stock of the latter description; but other varieties of honey are rather scarce. Some 30 cases of fine New Zealand have also been sold at \$10.80. Quotations are as follows: Haitien, \$6.24 to \$7.92 per cwt.; Peruvian, \$5.76 per cwt.; Chilean, \$5.76 to \$8.16 per cwt.; Jamaican, \$6.00 to \$8.40 per cwt.; Californian, \$5.60 to \$11.04 per cwt. Our beeswax market is overstocked and very dull. The only sales we have to record are on c.i.f. terms, one ton at \$35.68 per cwt., net cash, and 1½ tons at \$35.08. This is the ordinary Chilean beeswax. African sorts are steady, and business has been doing at last prices. Quotations are as follows: Chilean, \$33.88 to \$39.92; African, \$32.64 to \$34.48; West Indies, \$31.44 to \$33.28.

Liverpool, Nov. 5.

TAYLOR & CO.

THREE ADVANTAGES

There are three distinct advantages in depositing your money with the Savings Deposit Bank Company.

First, this institution provides entire safety. It is under the supervision of the State Banking Department of Ohio.

Second, it is convenient. You can send your deposits by Money Order, Check, Draft, or Registered Letter.

Third, by depositing your money with this bank you receive a substantial rate of interest—4 per cent per annum, compounded twice a year.

The SAVINGS DEPOSIT BANK COMPANY Medina, Ohio

E. R. ROOT, Vice-pres.

E. B. SPITZER, Cashier.

THE BANK THAT PAYS 4 PER CENT

CINCINNATI.—It seems that fruit and preserves have full sway of the market at the present time, owing to the low prices of these commodities, thus making the demand for honey suffer. However, we are selling fancy comb honey at \$3.75 to \$4.00 a case. Our best grade of extracted honey in 60-lb. cans we are selling at 8½ to 10, and amber honey in barrels at 6½ to 8, according to the quality and quantity purchased. For choice bright-yellow beeswax we are to-day paying 28 cts. per lb. delivered here.

WHY NOT GET ALL THE WAX?

It is an actual fact that twenty to forty per cent of the wax is thrown away in melting up old combs in the ordinary way. You can not get all the wax without applying pressure as well as heat. The HATCH PRESS has been built to stand this enormous strain, and at the same time is inexpensive to buy, and costs little to operate. It has been on the market for several years, and has "made good" everywhere. Listen a minute while we read you Mr. Wagar's letter:

Flat Rock, Mich., Feb. 1, 1911.

M. H. Hunt & Son,
Lansing, Michigan.

Dear Sirs:

I have had good success with the Hatch press. It more than paid for itself by the wax I secured by putting some slumgum from the solar extractor through it. I secured 32 lbs. of nice wax from the slumgum. Heretofore I had thrown it away.

I secured about three pounds of wax from every eight combs I put through it. Without it I did not get half that much. If plenty of water is used, once through the press is enough. I could not get enough wax the second time to pay for the time and fuel doing it.

I have not used it all day, so can not say how much I could render in a day. The press is perfectly satisfactory to me.

Very truly yours,

D. I. WAGAR.

P. S.—I was agreeably surprised by the amount of wax I secured from the slumgum.

Ask Yourself These Three Questions:

Would you like to get 32 lbs. of nice wax from slumgum?

Would you consider it a good investment to pay \$6 for a machine that would make \$10 worth of produce out of waste matter?

Did you notice that he said that it was "nice wax"?

Special Offer: We are making a special offer on the Hatch Press. If you want to produce MORE BEESWAX write us at once. Offer applies to any State in the Union.

M. H. HUNT & SON, LANSING, MICH.

Opposite Lake Shore Depot

HONEY - JARS

We keep in stock several styles of honey-jars—No. 25 heavy flint glass, \$4.75 gross.

Write for price on comb or extracted honey. Catalog of every thing a beekeeper uses, free.

"If goods are wanted quick, send to Pouder."

BEE SUPPLIES

**Glass and Paper Honey
jars, Hives, Comb and
Extracted Honey. . .**

An up-to-date stock of every thing used in connection with the bee and honey industry. On Bee Supplies I am offering liberal discounts for early orders, and I have all of the newest equipments, and very choicest in quality, that can be produced—Root Goods—with the advantage of having them shipped from Indianapolis. No one has ever endured an unfair deal from this house, and none shall ever occur; and when you place a trial order here I expect not only to have further orders from you, but that you will recommend my methods to your neighbors. Beekeeping is no longer an experiment, but a safe investment; and with modern equipments returns are fair, even during the poorer seasons.

WALTER S. POWDER:—Goods ordered from you arrived to-day as fine as silk. Thanks. I have had a poor year, and season now closing, with an average of 65 lbs. of comb per colony, and most of it spoken for at 25 cts. per section. Best wishes.

Knox, Ind.

JAS. ARNOTT.

If you are in need of finest honey to supply your local demands I can supply you.

I can use more beeswax on cash or trade basis, and you will find me prompt with returns.

I should like to place my catalog in your hands.

Walter S. Pouder, Indianapolis, Ind.

859 Massachusetts Avenue

A Business Proposition.

Your money in the savings bank is drawing 3 per cent, or at most 4 per cent interest. Here is an opportunity to invest it at 12 per cent—8 per cent more than it is now earning.

In most localities this has been a good season for honey and for making increase. Prospects were never better than for the coming season, and you are almost certain to be needing supplies in the spring. If you wait until the first of April or later, you must pay full catalog prices. If your order and remittance are sent in during December, a discount of 4 per cent will be allowed. Four per cent on money invested for four months is equivalent to 12 per cent per annum, figured for four months' time. It looks good, doesn't it? Why not effect this saving by ordering now, and thus secure the peace of mind that will result from having your supplies all ready when you need them most? Your order can be sent in now, and the goods will be shipped at any time to suit your convenience.

Best goods, best service, best treatment, are insured by sending your orders to OHIO'S BEE-SUPPLY CENTER—special headquarters for bee-keepers in Ohio, West Virginia, and western Pennsylvania. If you haven't a catalog, ask for it.

LEARN BEEKEEPING from the Beginning

"First Lessons In Beekeeping" and the . . . **\$1.00**
American Bee Journal, one year, Both for Only

"First Lessons in Beekeeping" is a 190-page book telling all that the beginner need know. . . . It has an attractive paper cover, and many illustrations.

"Doolittle's Scientific Queen-rearing," and the **\$1.00**
American Bee Journal, one year, Both for Only

Doolittle's "Scientific Queen-rearing" book contains 126 pages, and is bound in leatherette with round corners. It tells in the clearest way possible just how the famous queen-breeder, Mr. G. M. Doolittle, rears the best of queen bees in perfect accord with Nature's way. As all know, Mr. Doolittle has spent some 40 years in rearing queens and producing honey. He has no superior as a queen-breeder. You can learn to rear fine queens by following his directions.

The beginner will want "First Lessons;" the older beekeeper should have "Scientific Queen-rearing." You will not regret it if you send your \$1.00 now and get either one of these books with the JOURNAL, as the JOURNAL itself is worth more than the total cost.

AMERICAN BEE JOURNAL, . . . HAMILTON, ILLINOIS

ILLINOIS BEEKEEPERS

IMPORTANT ANNOUNCEMENT

Chicago Distributing House Discontinued for **Lewis Beeware** and **Dadant's Foundation**

The Arnd Honey & Bee Supply Company having gone out of business, Lewis Beeware and Dadant's Foundation will no longer be distributed from Chicago.

Note the New Arrangement

Northern Illinois Beekeepers in These Counties

Boone	Dupage	Kane	Lee	Stephenson
Carroll	Ford	Kankakee	Livingston	Vermilion
Champaign	Grundy	Kendall	McHenry	Whiteside
Cook	Iroquois	Lake	McLean	Will
DeKalb	Jo Daviess	La Salle	Ogle	Winnebago

Send All Inquiries and Orders to

G. B. LEWIS COMPANY

Home Office and Factory, Watertown, Wis.

By dealing direct with the G. B. Lewis Company, the beekeepers in the above counties get the benefit of the service afforded by their immense factory and warehouses. Watertown, being located near the Illinois State line, and having two trunkline railroads and two express companies running direct into Illinois, the G. B. Lewis Company can reach you as easily and quickly from Watertown, Wisconsin, as from Chicago.

Special Inducement

G. B. Lewis Company will guarantee that the freight charges to your station from the factory at Watertown, Wisconsin, will be no more than from Chicago. They will prepay the difference, if there be any, right on your shipping bill.

Beekeepers in Remaining Counties in Illinois
Send All Your Inquiries and Orders to

Dadant & Sons, Hamilton, Illinois

The above firm carries constantly on hand an immense stock of Lewis Beeware, and are manufacturers of Dadant's Foundation. By dealing with them direct you will receive as good or better service than from Chicago.

NOTICE.—If you are not on the mailing list of the G. B. LEWIS COMPANY, send your name in at once. Their Annual Catalog will be issued about January 1st, which will tell you whether to send your order to Watertown, Wis., or Hamilton, Ills.

RHODES DOUBLE CUT PRUNING SHEAR

THE only pruner made that cuts from both sides of the limb and does not bruise the bark. Made in all styles and sizes. We pay Express charges on all orders.

PAINT WITHOUT OIL

Remarkable Discovery that Cuts Down the Cost of Paint Seventy-five Per Cent.

A Free Trial Package is Mailed to Every One Who Writes.

A. L. Rice, a prominent manufacturer of Adams, N. Y., has discovered a process of making a new kind of paint without the use of oil. He calls it Powderpaint. It comes in the form of a dry powder and all that is required is cold water to make a paint weather-proof, fire-proof, and as durable as oil paint. It adheres to any surface, wood, stone, or brick, spreads and looks like oil paint, and costs about one-fourth as much.

Write to Mr. A. L. Rice, Manufacturer, 8 North St., Adams, N. Y., and he will send you a free trial package, also color-card and full information showing you how you can save a good many dollars. Write to-day.

FACTS!

—phen facts about the worth of a farm engine are what you want to know before you do any buying. That's what I give you in my big engine book.

THE BROWN FENCE & WIRE COMPANY
DEPT. 91 CLEVELAND, OHIO

"I made big interest on \$150,000 this year."

That is the reply which Mr. L. Casalagno, of Oakdale, California (in the San Joaquin Valley), made to the query: "What is your 120-acre fruit ranch worth to-day?"

Think of it! If his net profit was only six per cent, it would mean \$75 an acre, and six per cent is *not* big interest in California.

Couldn't you, with your native intelligence, industry, and ambition, do better than you are doing to-day, if you were located in a country where a man can make *big* interest on an average investment figured at \$1,250 an acre, and the land costs but one-tenth of that?

If you own your own place, can you earn *big interest* on the present value of your farm?

If you are renting, are you getting ahead?

How long will it take you to buy a farm of your own?

Can you see your way clear to a position of independence?

Think about this.

Talk it over with your family.

Would it not be the part of wisdom to at least investigate the possibilities of California?

I, as General Colonization Agent of the Santa Fe Railway, tell you that the chances to succeed are greater in California than they are in any place with which I am acquainted.

You can buy desirable farms, with water, in the San Joaquin Valley, for from \$125 to \$150 an acre, and these farms, properly cultivated and planted, will return to you as much as Mr. Casalagno received from his land.

Even if your net returns were no greater in California than they are to-day, wouldn't it be worth while moving there just to live where there is no winter—where mere existence is a delight?

The Santa Fe has no land to sell. Its interests are tied up with your interests, and unless you succeed, the railroad will be better off if you stay where you are.

We know you will prosper.

You can go and see for yourself at small expense.

On the first and third Tuesdays of each month the Santa Fe sells homeseekers' excursion tickets from Chicago to California, and elsewhere in the Southwest. Before you go, write for our two books, "The San Joaquin Valley" and "What California Means for You."

C. L. Seagraves

General Colonization Agent A. T. & S. F. Ry.
2448 Railway Exchange, Chicago.

FOR SALE.—A full line of beekeepers' supplies; also Italian bees and honey a specialty. Write for catalog and particulars. THE PENN CO., (Successor to J. M. Jenkins.) Penn. Miss.

Our Eureka cases will protect bees in single-walled hives; are durable, yet cheap. Let me tell you about them. Special December offer yours for a card. B. T. BOSSERMAN, Williamstown, O.

SEED WHEAT.—Improved Poole seed wheat—one of the highest yielders at the Ohio Experiment Station, where this seed originated. Guaranteed free from all foul seeds. Re-cleaned ready for drilling. Write for prices. L. H. RANDALL, Medina, O.

WANTS AND EXCHANGES

WANTED.—Solicitors. Established honey trade. \$75 month proposition to live men.

BULL & CAVANAGH, Hammond, Ind.

WANTED.—To rent an apiary of from 200 to 300 colonies for the season of 1913. For further particulars address

VERN O. DERBY, Box 16, Wileyville, W. Va.

WANTED.—Five-year lease on 20 or 25 acres of first-class garden land, with buildings, not over a mile from good express office; place to be used as high-culture bulb farm. Truck or onion district preferred on account of availability of competent help. N. L. CRAWFORD, LaGrange, Ohio.

WANTED.—To buy an apiary or line of apiaries in a southern clime, in or out of the United States, where the work begins in November and ends in March. I want to spend a few years in a warmer winter climate, coming back here in the summer. Address, giving particulars.

THOS. J. STANLEY, Manzanola, Otero Co., Colo.

HELP WANTED

WANTED.—Apiarist or helper who is willing to invest \$250 in an apiary. We allow you wages and percentage of crop, as manager. Particulars on request. APIARIST, Sawtelle, Cal.

WANTED.—Man to run 140 colonies for comb honey for season 1913. State salary wanted, and experience. Everything new. Care C. B. & Q. Ry. B. F. SMITH, Jr., Cowley, Wyo.

WANTED.—Experienced beemen for season of 1913; give age and experience in first letter. Men under 21 or over 45 need not apply.

J. W. GEORGE BEE Co., Imperial, Cal.

WANTED.—A young man, a born beekeeper, with clean habits, to help manage 700 colonies of bees; also farm work the year round. Want good recommendations. R. W. ENSLEY, Read, Colo.

POSITION WANTED

WANTED.—Job in an apiary by deaf-mute, 25, who has some knowledge of bee culture.
60904 GLEANINGS IN BEE CULTURE, Medina, O.

BEEES AND QUEENS

Our queens will please you. Price \$1.00 each.
C. W. PHELPS & SON, Binghamton, N. Y.

WANTED.—100 colonies of bees on Langstroth frames.
J. R. SIMMONS, Harvey, Ill.

FOR SALE.—Three-banded Italian queens bred for honey, gentleness, and prolificness. One, \$1.00; 6 for \$5.00.
WM. S. BARNETT, Barnett's, Va.

FOR SALE.—700 colonies of bees in first-class condition; young queens, plenty of feed in hives; 3 comb-honey supers per colony. Address
W. P. COLLINS, 1504 Pine St., Boulder, Colo.

Colonies of Italian bees in L. hives, 10-fr., built on full brood-frames, wired, body and shallow super, redwood, dovetailed, three coats white, sheeted lids; each neat, modern, and full of stores—any time.
JOS. WALEATH, Antioch, Cal.

Golden Italian queens that produce golden bees, the brightest kind. Gentle, and as good honey-gatherers as can be found. Each, \$1.00; six, \$5.00; tested, \$2.00; breeders, \$5.00 to \$10.00.
J. B. BROCKWELL, Barnett's, Va.

REAL ESTATE

FOR SALE.—Home, small apiary, and one acre of land. Healthful and good location. \$4500.
D. R. KEYES, Rt. 4, Montgomery, Ala.

Fertile Virginia farm lands, \$15.00 per acre and up. Easy payments. We will mail you our beautiful illustrated magazine one year free if you will send names of two friends who are interested in Virginia.
F. H. LABAUME, Agr'l Agent Norfolk & Western Ry., N. & W. Bldg., Room 73, Roanoke, Va.

INDIAN RUNNER DUCKS

Runners, hundreds, light fawns, also dark penciled, white egggers; \$1.00 and up.
R. O. DICKSON, Box 28, La Harpe, Ill.

Fawn and White Indian Runner duck eggs, \$1.00 per 11; \$7.00 per 100. Day-old ducklings, 25 cts. each. Mailing list free.

KENT JENNINGS, Mt. Gilead, O.

INDIAN RUNNER DUCKS.—American Standard light fawn and white. I have a fine lot of one-year-old breeders for sale at a real bargain price. I can start you, and start you with the best. Write me.
C. O. YOST, Rt. 4, Box D, Winchester, Ind.

POULTRY

Sicilian Buttercups. "Quality, not quantity," our motto. Eggs, \$1.50 and \$3.00 per 15.
WALTER M. ADEMA, Berlin, Mich.

Standard-bred heavy-laying Barred Rocks, S. C. Rhode Island Reds; stock of highest quality for sale. Send for catalog. Do it now.

Crystal Spring Farm, Rt. 3, Lititz, Pa.

MISCELLANEOUS

FOR SALE.—A dog, coon hound; guaranteed to run coon.
JOHN DRENTH, Kersey, Ind.

White and brown ferrets. Stamp for description and prices. JEWELL'S FERRET KENNELS, Spencer, O.

MICROSCOPE.—Six powers, from 45 to 200 diameters. Shows well the difference in size and form of blood corpuscles of man, chicken, and frog. Been used, but good as new. Send for interesting and instructive circular. J. F. PHIN, Paterson, N. J.

BEEKEEPERS DIRECTORY

Nutmeg Italian queens, leather color, after June 1, \$1.00.
A. W. YATES, Hartford, Ct.

Well-bred bees and queens. Hives and supplies.
J. H. M. COOK, 70 Cortlandt St., New York.

Improved golden-yellow Italian queens for 1912; beautiful, hustling, gentle workers. Send for price list.
E. E. LAWRENCE, Doniphan, Mo.

QUEENS.—Improved red-clover Italians, bred for business; June 1 to Nov. 15, untested queens, 75 cts.; select, \$1.00; tested, \$1.25 each. Safe arrival and satisfaction guaranteed.

H. C. CLEMONS, Boyd, Ky.

Quirin's famous improved Italian queens, nuclei, colonies, and bees by the pound, ready in May. Our stock is northern-bred, and hardy; five yards wintered on summer stands in 1908 and 1909 without a single loss. For prices, send for circular.

QUIRIN-THE-QUEEN-BREEDER, Bellevue, Ohio.

A GIFT WITH A THOUGHT IN IT.

There's one very simple way out of the Christmas shopping problem; don't shop, but sit quietly at home and subscribe for The Youth's Companion. The chances are, too, that no present you could buy for the young friend or the family you delight to honor could confer so much pleasure as this gift of The Youth's Companion for a whole round year—fifty-two weeks' issues, and the fifty-second as keenly anticipated and enjoyed as the very first.

There will be stories for readers of every age; sound advice as to athletics; suggestions for the girl at college or making her own way in the world; good things for every member of the family—all for \$2.00—less than four cents a week.

The one to whom you give the subscription will receive free all the remaining issues of 1912, as well as The Companion Window Transparency and Calendar for 1913, in rich, translucent colors. It is to be hung in the window or over the lampshade. You, too, as giver of the present will receive a copy of it.

THE YOUTH'S COMPANION,
144 Berkeley St., Boston, Mass.
Adv't.

New Subscriptions Received at this Office.

CHURCH MEMBERS AND INTemperance.

I have been interested in your articles on intemperance. I have fought intemperance in all its forms from boyhood, and expect to fight it the remainder of my days. I belong to no church; but reading your articles has often brought tears to my eyes when I think of the church-members who uphold intemperance.

Milano, Texas, Aug. 23.

G. W. BEARD.

SPECIAL NOTICES

By OUR BUSINESS MANAGER

BIG SAVING DEMONSTRATED; U. S. GOVERNMENT MAKES SIGNIFICANT TESTS OF TOOL-GRINDING MACHINES.

The United States Government has recently been making some very interesting and instructive tests of various tool-grinding machines, and the result is an official recommendation to its various forestry and improvement camp supervisors throughout the country.

The machine found best adapted for the sharpening of Uncle Sam's tools had a grinding capacity per hour of five double-bitted axes, medium dull or as newly purchased. This work required the labor of only one man. In comparison it took two men five hours to grind five similar axes on a good ordinary grindstone of 28 inches diameter. Figuring the cost of labor at \$2.50 a day, the expense of putting an ax in first-class shape with the machine was 6 1/4 cents, as against 62 1/2 cents with the grindstone. This is equivalent to a saving of \$22.50 in one day's steady run.

EXTRACTED HONEY.

We have secured some of the finest extracted honey this season, and can ship promptly at the following special prices:

WHITE CLOVER, the standard honey of the East. In case lots of two five-gallon cans, 120 lbs. at ten cents per pound; in five-case lots at 9 1/2 cts., and in ten-case lots at 9 cts. Or we can furnish it in one-gallon screw-top cans at \$1.60 per gallon in one-gallon lots, or \$1.50 per gallon in ten-gallon lots.

SWEET CLOVER, very fine, at the same price for all quantities named as the white clover.

ALFALFA, preferred by many, and a little cheaper. Case lots at 9 1/2 cts.; five cases at 9 cts.; ten cases at 8 1/2 cts.; in one-gallon cans at \$1.50; ten cans at \$1.40.

AMBER, from the fall flowers of different localities, 8 1/2 cts. per pound in case lots; 8 cts. in five-case lots, and 7 1/4 cts. in ten-case lots. In one-gallon cans, \$1.30 per gallon; \$1.20 per gallon in ten-gallon lots.

If you are interested in buying twenty cases or more of one kind or assorted, write us for special prices.

At this season of the year nearly all of the honey is candied. If you want it in the liquid state, please mention this when ordering.

SWEET-CLOVER SEED.

Judging from our experience in securing a supply of sweet-clover seed, and the reports we get from others who handle this seed, there is going to be a big shortage of seed to supply the demand for the coming season. The interest in this clover as a soil-restorer continues to grow and increase with a corresponding increase in the demand for seed. The weather was so wet and unfavorable during the time that seed is saved that we are not receiving one-fourth the amount we had reason to expect on our contracts three months ago. In putting the unhulled seed through the clover-huller the shrinkage in weight has been greater than it was last year. Taking these facts into account we are not in a position to make as low prices on seed as we had hoped to make.

We now have a good supply of new seed, all of which has so far come to us with the hulls on. We have put it through a clover huller, and re-cleaned it so that we can offer it, both hulled and unhulled, as follows:

PRICE LIST OF SWEET-CLOVER SEED.

Hulled white biennial (*Melilotus alba*), 1 lb., 24c; 10 lbs., \$2.20; 25 lbs., \$5.25; 100 lbs., \$20.00.

Unhulled white ditto, 1 lb., 17c; 10 lbs., \$1.50; 25 lbs., \$3.50; 100 lbs., \$13.00.

Hulled yellow biennial (*Melilotus officinalis*), 1 lb., 28c; 10 lbs., \$2.60; 25 lbs., \$6.25; 100 lbs., \$24.00.

Unhulled yellow ditto, 1 lb., 21c; 10 lbs., \$1.90; 25 lbs., \$4.50; 100 lbs., \$17.00.

Hulled yellow annual (*Melilotus Indica*) 1 lb., 14c; 10 lbs., \$1.20; 25 lbs., \$2.75; 100 lbs., \$10.00. Samples mailed free on request.

SPECIAL NOTICES

A. I. ROOT

WHO, WHERE, AND WHEN.

Our readers will notice or have noticed, perhaps, that almost every communication that finds a place in GLEANINGS gives the date as well as name and address; and I am sorry to say that a great part of our agricultural papers do not seem to recognize the importance of dates. Every little while somebody writes in regard to late planting for certain grains or vegetables. He often adds, "The seed should be put in now without any delay." Now, what does that mean when you can not tell whether the editor had the letter on his desk a month or two or not? Somebody in a poultry journal says he finds no difficulty at all in hatching in September or October; but there is no hint in the communication as to where he lives. How much does it amount to? Again, a communication refers to something that has happened; but as soon as the event was recorded in the papers, something else has occurred that puts quite a different aspect on the matter. If the friend who wrote had dated his letter the reader could at once decide whether he knew of the final outcome; and I might enumerate ever so many other reasons why every one who reads thoughtfully has a right to know *who* is talking, *where* he lives, and *just when* he made this statement. Am I not right about it?

A NEWSPAPER THAT LOVES RIGHTEOUSNESS AND HATES INQUIRY; ALSO SOMETHING ABOUT THE INITIATIVE AND REFERENDUM.

Mr. Root:—Would you approve of a newspaper that did not announce divorces, rich weddings, rich folks' parties, murders, joy rides, colored-supplement jokes, beauty recipes, novels, etc.? I think I will send you one, with the request that you look it over and let us hear in GLEANINGS what you think of it.

I think you will approve of the advertisement regulations on page 7, July 17. You might hunt for a cigarette or liquor advertisement or patent medicine, etc. Does not this paper make you wonder if you are awake? Yet it already has about 75,000 circulation. I refer to the Los Angeles *Municipal News*, published by the city for the citizens. I send you two copies.

My brother George was one of the active workers in securing and (later) one of the attorneys in defending the initiative and referendum in California. A year ago he succeeded, by use of the now granted initiative and referendum, in petitioning for a law providing a municipal newspaper, telling the citizens about their city's business. At the election last fall his proposal on the ballot was one of the laws favorably voted on. He was called the father of the municipal newspaper, and was made the head of the commission. The two copies I mail you show what it is like. I think they will interest you.

I wish you would give the initiative and referendum some boosts in GLEANINGS. We common folks can get many good things done if we can only get hold of our ballot-boxes and have some say about affairs. As it is now, the machine manipulators run every thing. All the people get is just enough charitable gifts grudgingly allowed us by our rulers to bribe us to vote their machine election ticket. Sometimes we get a really important thing because our rulers fall out among themselves and offer a high price for votes. But since we ought not to have to serve the bosses, why not get the initiative and referendum, and ourselves vote to ourselves the things we ought to have? They do this in many States already, and I see Ohio is to do the same soon. It is particularly as a temperance man that I am interested in getting the initiative and referendum. It is our only hope in Indiana for advanced temperance action. Three parties, including the Prohibition, endorsed this year in Indiana.

Greencastle, Ind., Aug. 19. DAVE S. DUNLOP.

Our friends will see by the date that the above was sent before our Ohio election of September 3, and he is now prob-

ably rejoicing with us that we too have the initiative and referendum, and hope soon by God's grace to have woman suffrage as they have in California.

ONLY TEN POUNDS PER COLONY, EVEN IN CALIFORNIA.

The bee season is closed for 1912—one of the worst in 20 years since I started bees. It seemed to do well, and bees bred up fair, and got some honey right along, but very little surplus. I shall get only one ton, or less from 200 hives, and a lot of it has been secured since 1911, so the bees got only enough for themselves. I have always got some honey, but never a failure yet here. There are others in the same box with myself.

Well, we have more than half of this county dry. As I voted to close saloons I am well pleased; and they called me all kinds of names, as the precinct I am in went wet.

New Almaden, Cal., Sept. 25. PAT KEATING.

Never mind a small crop of honey once in twenty years, friend K.; and, more than all, do not mind being called all kinds of names because you are a "temperance crank." Remember the sure promise to all such under like circumstances. "Blessed are ye when men shall persecute you and revile you, and say all manner of evil against you falsely for my sake;" and our good friend Luke adds a tremendous emphasis to the above, for he not only says you are to rejoice and be glad when you are persecuted for being right, but even says, "Rejoice in that day, and leap for joy, for in like manner did their fathers unto the prophets."

Honey reports continued from page 2.

NEW YORK.—Honey is moving well, both extracted and comb—buckwheat honey especially. We are selling fancy white comb honey for 15 and 16; buckwheat, 11 to 13, as to quality; extracted clover, 8 to 9½; the latter price is for fancy white; buckwheat extracted, from 7 to 8.

New York, Nov. 25. CHAS. ISRAEL & BROS.

ALBANY.—Honey receipts are very light. The crop is turning out to be the lightest ever known in this section. Fancy grades of buckwheat and clover are so scarce as not to be worth quoting. No. 1 grade clover, 15 to 16; mixed, 13 to 14; extracted white, 9 to 9½; amber, 8 to 8½; buckwheat, 8 to 8½; beeswax, 30 to 32.

Albany, Nov. 25. H. R. WRIGHT.

DENVER.—We quote comb honey in a jobbing way: No. 1, per case of 24 sections, \$3.05; choice, \$2.90; No. 2, \$2.70. Extracted honey, white, 9; light amber, 8; strained, 6¾ to 7½. We pay 26 in cash and 28 in trade for clean yellow beeswax delivered here.

THE COLORADO HONEY-PRODUCERS' ASS'N.
Denver, Nov. 21.

CHICAGO.—Sales of honey during November up to this writing have been of large volume, and yet the market is well supplied. Prices on No. 1 white comb range from 15 to 16; A No. 1 to fancy, 17 to 18; No. 2 white, 10 to 12; No. 1 to fancy amber, 13 to 15. Dark and out-of-condition lots are difficult to place at 9 to 10. Extracted honey in new cans and cases, white-clover and linden, brings from 9 to 10; amber grades, 7 to 8. Beeswax brings 30 to 32.

R. A. BURNETT & CO.

Chicago, Nov. 18.

Convention Notices

A convention of beekeepers of southern New England will be held in Arcanum Hall, 152 Weybosset St., Providence, R. I., Saturday, Dec. 7, 1912, at 2:30 P. M. and 8:00 P. M. Dr. E. F. Phillips, of Washington, D. C., will address both sessions.
Providence, R. I. ARTHUR C. MILLER, Sec.

The Ohio State Beekeepers' Association will meet in Columbus, January 14 and 15, with an evening meeting on the 14th. I am asking each member to suggest some topic for general discussion at this meeting. Help make the meeting a valuable one, and a great success.

Columbus, O., Nov. 13.

N. E. SHAW.

The Chicago-Northwestern Beekeepers' Association will hold its annual meeting at the Great Northern Hotel, Room L, 38, Chicago, on Thursday and Friday, Dec. 19 and 20. The Great Northern Hotel is situated on the corner of Dearborn Street and Jackson Boulevard, and is easily accessible from any railroad station. As Chicago is a central point there should be a good meeting as in the past. Several of the noted beekeepers have promised to be present; and as our meeting comes just after the Wisconsin meeting, a good delegation is expected from Wisconsin. All beekeepers are invited to attend.

Hamilton, Ill., Nov. 9.

L. C. DADANT, Sec.

The annual convention of the Colorado State Beekeepers' Association will be held December 12 and 13, at the Auditorium Hotel, corner of 14th and Stout Streets. The Auditorium Hotel will be headquarters for the association. The rates are \$1.00 a day and up. The hotel is new and is centrally located. The management has placed the Pompeian Room at our disposal, and a better convention room we never had. Take Colfax cars under viaduct at Union Depot and get off at 15th and Stout St. Walk half a block west to the hotel.

Every session of the convention will be a live one, and we hope for a large attendance. We will have an auto session. This will be a hummer, as we are going to have the auto dealers show us their utility cars and their winning points.

The program has not been entirely arranged for at this date, but we shall have worth-while sessions.

WESLEY FOSTER, Secretary.

We wish to call the attention of beekeepers to the opportunities offered by the The Extension Service of the Massachusetts Agricultural College, in the Ten Weeks' course, beginning January 6. A course in beekeeping is designed which will be a general practical survey of the maintenance of bees, not only for their products, but as an adjunct to modern agriculture. Special effort will be made to correlate the subject with the various phases of horticulture, namely, fruit-growing, cranberry culture, market-gardening, and greenhouse crops. Particular emphasis will be laid upon the most recent and approved appliances and systems of manipulation. The fine collection of appliances of the college will give exceptional opportunity to the serious apiculturist. For further information apply to the Director of The Extension Service, M. A. C., Amherst, Mass.

WISCONSIN BEEKEEPERS' ASSOCIATION.

The thirty-fourth annual convention of the Wisconsin State Beekeepers' Association will be held at the Capitol building, Madison, December 17 and 18, beginning at 10 A. M., Tuesday.

As usual an interesting program, consisting of papers and questions, will be presented for discussion. Important legislation, to be presented to the next legislature, will be discussed.

The Northwestern Beekeepers' Association holds its annual convention at Chicago, December 19 and 20, thus giving all members an opportunity to attend both conventions at very little additional expense.

Headquarters for the beekeepers will be Simons Hotel. To secure a room you must write in advance, enclosing \$1.00.

Augusta, Wis., Nov. 9.

GUS DINTMER, Sec.

The Use of Root's

With the increased interest in and demand for the better grades of extracted honey, all beekeepers, large and small, are interested in honey-extractors. The time was when the small beekeeper thought it didn't pay to produce extracted honey, and, as a consequence, he lost quite a large per cent of the actual profit his bees might have made him. For instance, during the past summer, with the remarkable honey-flow there was in many localities, even in an apiary of ten colonies an extractor might have been made to pay for itself in a single day. Record honey-flows like this demand a rapid handling of the combs if the bees are to take advantage of the flow of nectar. They can not make new combs fast enough to store the nectar that must be gathered within a few hours, or it is lost. If the filled combs can be taken from a hive, extracted, and replaced at once, they will be filled again with astonishing rapidity, and hundreds of pounds of honey harvested that would otherwise have been lost.

A one-horse-power air-cooled gasoline-engine connected to an eight-frame extractor. For economy of floor-space and convenience of the levers this arrangement is perhaps the best.

For the small apiary the hand-run extractors are usually sufficient; but where any number of colonies are kept from which to produce honey for the market, the power-equipped extractors are by far to be preferred. Even the first cost is very moderate; and when the wonderful work done by these machines is taken into consideration it will readily be seen that the purchase of such a machine is an investment which yields the beekeeper a handsome profit.

The popularity of these machines is perhaps best estimated by reading letters received from a few of our customers who are using them, and from the fact that our trade in them is constantly increasing. We now have in the process of making, twelve Root Automatic Extractors for one beekeeper in the West, who has 2000 colonies of bees, and maintains 15 yards. Certainly this large beekeeper would not make such an investment were he not sure of results.

Honey Extractors

Our extractors are carefully made from selected materials, and with ordinary usage will last for years. All power machines are fully equipped ready for running. We make extractors in all sizes from two to eight frame, and the power machines in four, six, and eight frame size, or larger, if ordered special. The prices range from \$9.50 for a small hand-run machine to \$52 for an eight-frame power-equipped machine. A one-horse-power air-cooled engine is \$60, and a 1 $\frac{3}{4}$ horse-power water-cooled, \$65.

These machines are run by a one-horse-power gasoline-engine which may be put to so many other good uses about the place you will wonder how you ever got along without it.

A word about the power extractor I purchased from you through H. L. Jones, of Goodna. I found it to work very satisfactorily, and it will do all it is claimed to do, and more. I use the gasoline-engine for several purposes besides driving the eight-frame extractor, such as driving the washing-machine for the lady of the house, and corn cracking and grinding. I consider it one of the best speculations I made in connection with the apiary.

Pittsworth, Queensland.

F. C. GOLDER.

Yours of the 16th, also the brake-band for power-extractor, came to hand. Thanks for sending it so promptly. This is my second season with the power extractor. I would not be without it now, even if I had only fifty colonies.

DAVID RUNNING.

Grindstone City, Mich., July 19, 1910.

I received the extractor I ordered of you some time ago. It arrived in good shape. I set it up and extracted 143 quarts of honey, and sold it at 35 cts. a quart. The extractor is just fine—does the work completely.

F. D. KING.

Athens, Ohio, Aug. 16, 1912.

The engine I got of you this spring has done fine. We ran it all fall, and never had any trouble at all.

V. V. DEXTER.

North Yakima, Wash., Jan. 18, 1911.

Uncapping Knife

Just a word about the new steam uncapping-knife which seems to go quite naturally with the power extractors. No more perfect device has ever been put into the hands of beekeepers, and one who has any considerable amount of uncapping to do should not be another season without this knife. Steam may be generated for this in a half-gallon can over a single-burner oil-stove. We furnish the knife complete with the hose for \$5.00, and with boiler for \$6.00.

As regards the steam uncapping-knife, I think it a grand investment, so far ahead of the cold knife that it will pay any ordinary beekeeper to have the outfit. I purchased an outfit one year ago for my home yard, and thought so much of it that I got another this year for my outyard.

WM. ELLIOTT.

Adelaide, Ont., September 28, 1911.

Root's Steam Uncapping-knife.—A half-gallon can over a single flat-wick oil-stove furnishes the steam necessary.

The A. I. Root Co., Medina, O.

No matter who gets it as a Christmas
gift all hands share in it —

THE YOUTH'S COMPANION

Weekly Inter Ocean and Farmer

Both a Full . . . **\$1.25**
Year for Only

All the News of the World and Home

Only 25 Cents more than the Price of Gleanings Alone

The Weekly INTER OCEAN and FARMER

is truly a Great Weekly Paper, and is the only Weekly published by a Chicago Daily. Thus THE WEEKLY INTER OCEAN AND FARMER'S special advantages in securing and printing important world's news are clearly obvious.

The World's Greatest Live Stock, Grain, and Produce Markets are in Chicago, and are Most fully and accurately reported by THE WEEKLY INTER OCEAN AND FARMER.

When you add the special features of its own various attractive departments, such as Home Health Club, Lost and Found Poems, Chess and Checkers; Field, Farm, Garden, and Veterinary Topics; Complications, Modes and Pattern Department, Sunday School Lessons, etc., you will realize and appreciate the big money's worth given in each issue of THE WEEKLY INTER OCEAN AND FARMER at its subscription price of \$1.00 per year.

**These features, together with a Special Magazine Department
Make up the Leading Farm, Home, and News Paper of the West**

OUR OFFER	{ The Price of the Weekly Inter Ocean and Farmer remains \$1.00 a Yr.
	{ The Price of Gleanings in Bee Culture is 1.00 a Yr.
	{ The Two Papers each one year will cost only 1.25

N. B.—This special arrangement with The Weekly Inter Ocean and Farmer is for a limited time only. Subscribers to the Weekly Inter Ocean and Farmer are assured that no papers will be sent after their subscriptions expire unless their subscriptions are renewed by cash payments.

Prepare for Next Season and Save 4 Per Cent on all "falcon" BEE SUPPLIES

"FALCON" hives are made of the best lumber obtainable for the purpose, the knotted parts being cut out, the waste pieces being used in a line of toy blocks requiring only small cuts. This leaves a clear surface; that's why we have the reputation of making the finest supplies in the country.

"FALCON" foundation. We make it in our own plant. The best grades of pure beeswax only are used. Special prices for quantities.

Our old customers who use special-size sections, foundation, frames, etc., should order now. Later, when the rush is on, it's hard for us to take care of you.

A copy of Simplified Beekeeping postpaid for the asking.

We can give orders prompt attention. We guarantee satisfaction. A trial will convince you.

How to Produce

EXTRACTED HONEY

THIS is the title of a neatly printed, illustrated booklet, the second edition of which has just been published. Each operation in the process of extracted-honey production is explained in detail, with photographic reproductions and drawings to make the text more plain. Beginning with the chapter on "Preparing Colonies for the Honey-flow," the booklet concludes with a description of "Packages for Extracted Honey."

Many helpful and valuable suggestions will be found within the 44 pages this booklet contains, and it is a pleasure to announce its addition to our Bee-keepers' 10-cent Library. Order by name or specify Number 25.

CHICAGO

Do You Love SWEETS?

Ralph Waldo Emerson Did

He said you can attain to royalty by loving sweets.

"He who knows what SWEETS
... are in the ground, the waters,
the plants, the heavens, and how
to come at these enchantments, is
the rich and royal man."

"HOW to come at these?"

Aye, there's the rub.

How many people miss them! and perhaps some of these many, strange to say, *keep bees*

Want to know how?

HOW TO KEEP BEES!

By Anna Botsford Comstock. A most entertaining and practical book for the beginner. Tells a beginner's experiences in a way to help other beginners.

PRICE \$1.10 POSTPAID.

The A. I. Root Co., Medina, Ohio.

HONEY MARKETS

The prices listed below are intended to represent, as nearly as possible, the average market prices at which honey and beeswax are selling at the time of the report in the city mentioned. Unless otherwise stated, this is the price at which sales are being made by commission merchants or by producers direct to the retail merchants. When sales are made by commission merchants the usual commission (from five to ten per cent), cartage, and freight will be deducted; and in addition there is often a charge for storing by the commission merchant. When sales are made by the producer direct to the retailer, commission and storage and other charges are eliminated. Sales made to wholesale houses are usually about ten per cent less than those to retail merchants.

EASTERN GRADING RULES FOR COMB HONEY.

FANCY.—All sections well filled, combs straight, firmly attached to all four sides, the combs unsoiled by travel-stain or otherwise, all the cells sealed except an occasional one, the outside surface of the wood well scraped of propolis.

A No. 1.—All sections well filled except the row of cells next to the wood; combs straight; one-eighth part of the comb surface soiled, or the entire surface slightly soiled; the outside surface of the wood well scraped of propolis.

No. 1.—All sections well filled except the row of cells next to the wood; combs straight; one-eighth part of the comb surface soiled, or the entire surface slightly soiled.

No. 2.—Three-fourths of the total surface must be filled and sealed.

No. 3.—Must weigh at least half as much as a full-weight section.

In addition to this the honey is to be classified according to color, using the terms white, amber, and dark; that is, there will be "Fancy white," "No. 1 dark," etc.

NEW HONEY-GRADING RULES ADOPTED BY THE COLORADO STATE BEEKEEPERS' ASSOCIATION,
DECEMBER 13, 1911.

FANCY WHITE.—Sections to be well filled, comb firmly attached on all sides and evenly capped, except from the outside row next to the wood. Honey, combs, and cappings white, and not projecting beyond the wood. Wood to be well cleaned; no section in this grade to weigh less than 13½ ounces.

No. 1.—Sections to be well filled, combs firmly attached on all sides and evenly capped, except the outside row next to the wood. Honey white or very light amber; comb and cappings from white to slightly off color. Combs not projecting beyond the wood; wood to be well cleaned; no section in this grade to weigh less than 13½ ounces.

CHOICE.—Sections to be well filled; combs firmly attached; not projecting beyond the wood, and entirely capped, except the outside row next to the wood. Honey, comb, and cappings from white to amber, but not dark; wood to be well cleaned; no section in this grade to weigh less than 12 ounces.

No. 2.—This grade is composed of sections that are entirely capped, except row next to wood, weigh-

ing from ten to twelve ounces, also of such sections that weigh 12 ounces or more, and have not more than 50 uncapped cells all together, which must be filled. Combs and cappings from white to amber in color, but not dark; wood to be well cleaned.

EXTRACTED HONEY.—Must be thoroughly ripened; weigh 12 pounds per gallon. It must be well strained, and packed in new cans. It is classed as white, light amber, and amber.

STRAINED HONEY.—This is honey obtained from combs by all other means except the centrifugal extractors, and is classed as white, light amber, amber, and dark; it must be thoroughly ripened and well strained. It may be put up in cans that previously have contained honey.

BOSTON.—We quote fancy white comb at 16 to 17; No. 1 white comb, 15 to 16; fancy white extracted, 10 to 11; light amber, 9 to 10; amber, 8; beeswax, 30.

Boston, Dec. 6.

BLAKE-LEE CO.

CHICAGO.—The receipts of honey have been in excess of the sales during the past month, so that now stocks are quite heavy. Prices have changed but little, and if any thing they are lower on both comb and extracted. Beeswax is still in demand at 30 to 32 per lb.

Chicago, Dec. 4.

R. A. BURNETT & Co.

SCHENECTADY.—We note a considerable falling off in demand for comb honey, and customers are buying cautiously, having learned from experience that honey meets with neglect during the holidays. Extracted is in good demand, with no buckwheat to offer. We quote fancy white in paper cartons, 15 to 16; No. 1, 14 to 15; No. 2 and mixed, 12 to 13; buckwheat, 13 to 14; extracted, light, 8 to 9; amber, 7 to 8.

Schenectady, Dec. 3. CHARLES MACCULLOCH.

ZANESVILLE.—The demand for honey is rather better than is usual so near the holidays. Producers have either disposed of their stock or are holding back their crop for higher prices, which are not now very likely to materialize. Best grades of white comb are selling to the retail grocery trade at 18 to 19; best white extracted in five-gallon cans brings 9 to 10, with rather slack demand. Producers are receiving for beeswax 28 cts. in cash, 30 in exchange for bee supplies.

Zanesville, Dec. 2.

E. W. PEIRCE.

ST. LOUIS.—There is a good demand for new comb honey in this market, especially for the better grades. Fancy white is bringing from 16 to 17; No. 2, 15; light amber from 12 to 14, and dark from 9 to 11. Choice California comb honey is offered at \$3.25 to \$3.50 per case. The demand for extracted honey is only fair the past two weeks. Light-amber Southern, in barrels and half-barrels, will bring 7 cents; in five-gallon cans, 7½; light-amber California extracted, 8½ to 9; water-white, 9 to 9½. Beeswax is in good demand at 30 cents for prime; inferior and impure, less.

St. Louis, Dec. 3. R. HARTMANN PRODUCE CO.

SURE, OLD COMBS ARE VALUABLE

IF shipped to us for rendering. . . WE EXTRACT 99½ per cent OF WAX, and then pay you Highest Market Prices, or 2 cents additional in trade. . . YOU CAN'T APPROACH THAT FOR PROFIT. . . We need great quantities of Comb and Extracted Honey. . Write us.

THE FRED W. MUTH CO.

51 Walnut Street

Cincinnati, Ohio

The Best Time to Buy Supplies

The season just past has demonstrated more clearly than ever the necessity for being prepared for a honey-flow **BEFORE** it comes. If you wait until the season is upon you, the chances are that the greater part of the crop will be lost while you are impatiently waiting for supplies to arrive. It may seem a little early now to think of next season's honey harvest; but the fact of the matter is, this is just the time to order goods for next season.

We are beginning now to replenish our stocks. We shall have carload orders coming from the factory very often for the next few weeks. Special orders placed now can have just the attention they need, both here and at the factory, and you may have your goods sent in one of our cars, thereby saving on transportation charges. Regular stock will come straight to you from our warehouse in new unbroken packages, and you can put the goods together in your odd minutes, thereby saving the expense of extra help in the spring.

Our usual discounts for early orders apply again this season—4 per cent for cash orders sent in December, the discount diminishing one per cent per month as the season advances. These discounts mean a considerable saving, and you might as well take advantage of the highest by ordering now. No change of prices has as yet been announced, and you may, therefore, order from your present catalog. If your catalog has been mislaid, write us at once and we will send another.

If your season's crop of honey is not yet disposed of, we can give you a good price and handle it promptly. Send samples of extracted and full information as to containers, flavor, quantity, price, etc. We also handle comb honey.

CINCINNATI.—We are selling fancy comb honey at \$3.75 to \$4.00 a case; fancy extracted honey at 8½ to 10; amber honey at 6½ to 8, according to the quality and quantity purchased. For choice bright-yellow beeswax we are paying 28 cts. delivered here.

Cincinnati, Dec. 3. THE FRED W. MUTH CO.

DENVER.—We quote comb honey in a jobbing way, No. 1, \$3.05 per case of 24 sections; choice, \$2.90; No. 2, \$2.70. Extracted honey, white, 9; light-amber, 8 to 8 1-3; strained, 6¾ to 7½. We pay 26 in cash and 28 in trade for clean yellow beeswax delivered here.

THE COLORADO HONEY-PRODUCERS' ASSOCIATION.
Denver, Dec. 6.

ALBANY.—The honey market is quiet, with very light receipts of any good comb honey. Any fancy clover or buckwheat comb honey is selling high if in good order—16 cts. for clover; 15 for buckwheat; if mixed, and more or less candied, as so much is, it has to sell at buyer's offer. This is proving to be the shortest crop of honey we ever experienced. Buckwheat extracted brings 8; clover, 8½. Beeswax, 30 to 32.

Albany, Dec. 5. H. R. WRIGHT.

CINCINNATI.—The demand for comb and extracted honey is light, with a good supply. No. 1 white comb honey sells in large lots at \$3.60 per case of 24 sections. There is no demand for off grades. White extracted honey in 60-lb. cans is selling from 9½ to 10 cts.; light amber in barrels, 7 to 7½; in 60-lb. cans, 8 to 8½. Beeswax, fair demand, sells at \$33.00 per cwt. The above are our selling prices, not what we are paying.

Cincinnati, Dec. 3. C. H. W. WEBER & Co.

INDIANAPOLIS.—White comb sells at 18 cts. in ten-case lots; No. 1 white, one cent less. Amber combs in slow demand, and at lower figures. Best extracted sells at 11 to 12 cents in 5-gallon cans. Comb honey seems to be in excessive demand, and very little is now being offered by producers; and it is surmised that some are holding for higher prices; but at higher prices the demand would cease. Beeswax is in good demand, and producers are being paid 30 cents per pound.

Indianapolis, Dec. 10. WALTER S. POWDER.

LIVERPOOL.—During the past fortnight there has been no business of any importance put through in honey. Quotations remain unchanged as follows: Haitien, \$6.24 to \$7.92 per cwt. Peruvian, \$5.76 per cwt.; Chilian, \$6.24 to \$9.12; Jamaican, \$6.60 to \$8.16; Californian, \$10.20 to \$11.40. The only sales of beeswax are 12 bags at \$34.24, and 5 at \$34.68, both Chilian. Quotations are as follows: Spanish, \$33.88 to \$39.72; African, \$32.64 to \$34.48; West Indies, \$31.44 to \$36.28.

Liverpool, Nov. 21. TAYLOR & Co.

The A. I. Root Co.—I enclose subscription for Frank Eis. Mr. Eis has been a beekeeper many years. Two years of that time he had an entire failure of crops, and his bees not only paid all expenses of their living but furnished the money to buy corn to keep his hogs and other stock. He had no winter loss last year.

Humboldt, Neb., Aug. 23. J. L. GANDY.

The A. I. Root Co.—I enclose herewith a check for \$2.25 to cover my subscription to GLEANINGS IN BEE CULTURE and the A B C of Bee Culture. I kept bees in Virginia several years, and moved here a year ago. This spring I bought a colony of bees, increased to four colonies, and have over 100 lbs. of fine section honey, and this in a place where bees have never been kept before, and several miles to the alfalfa-fields. I find it a delightful pastime and an absorbing recreation for one confined as I am to a specialist's office. I should not know how to keep house without GLEANINGS, so do not stop it at any time.

Helena, Mont., Sept. 10, 1912. DR. W. M. COPENHAVER.

WHY NOT GET ALL THE WAX?

It is an actual fact that twenty to forty per cent of the wax is thrown away in melting up old combs in the ordinary way. You can not get all the wax without applying pressure as well as heat. The HATCH PRESS has been built to stand this enormous strain, and at the same time is inexpensive to buy, and costs little to operate. It has been on the market for several years, and has "made good" everywhere. Listen a minute while we read you Mr. Wagar's letter:

Flat Rock, Mich., Feb. 1, 1911.

M. H. Hunt & Son,
Lansing, Michigan.

Dear Sirs:

I have had good success with the Hatch press. It more than paid for itself by the wax I secured by putting some slumgum from the solar extractor through it. I secured 32 lbs. of nice wax from the slumgum. Heretofore I had thrown it away. I secured about three pounds of wax from every eight combs I put through it. Without it I did not get half that much. If plenty of water is used, once through the press is enough. I could not get enough wax the second time to pay for the time and fuel doing it.

I have not used it all day, so can not say how much I could render in a day. The press is perfectly satisfactory to me.

Very truly yours, D. I. WAGAR.

P. S.—I was agreeably surprised by the amount of wax I secured from the slumgum.

Ask Yourself These Three Questions:

Would you like to get 32 lbs. of nice wax from slumgum?

Would you consider it a good investment to pay \$6 for a machine that would make \$10 worth of produce out of waste matter?

Did you notice that he said that it was "nice wax"?

Special Offer: We are making a special offer on the Hatch Press. If you want to produce MORE BEESWAX write us at once. Offer applies to any State in the Union.

M. H. HUNT & SON, LANSING, MICH.

Opposite Lake Shore Depot

BEE SUPPLIES

**Glass and Paper Honey
jars, Hives, Comb and
Extracted Honey. . .**

An up-to-date stock of every thing used in connection with the bee and honey industry. On Bee Supplies I am offering liberal discounts for early orders, and I have all of the newest equipments, and very choicest in quality, that can be produced—Root Goods—with the advantage of having them shipped from Indianapolis. No one has ever endured an unfair deal from this house, and none shall ever occur; and when you place a trial order here I expect not only to have further orders from you, but that you will recommend my methods to your neighbors. Beekeeping is no longer an experiment, but a safe investment; and with modern equipments returns are fair, even during the poorer seasons.

WALTER S. POWDER:—Goods ordered from you arrived to-day as fine as silk. Thanks. I have had a poor year, and season now closing, with an average of 65 lbs. of comb per colony, and most of it spoken for at 25 cts. per section. Best wishes.

Knox, Ind.

JAS. ARNOTT.

If you are in need of finest honey to supply your local demands I can supply you.

I can use more beeswax on cash or trade basis, and you will find me prompt with returns.

I should like to place my catalog in your hands.

Walter S. Pouder, Indianapolis, Ind.

859 Massachusetts Avenue

Holiday Greeting!

I take this opportunity to thank my customers and friends for the patronage, help, and encouragement given me during the last and former seasons. It has been my aim to have you all feel that I have sought, not your money alone, but your good will and friendship as well. My relations with you have been most pleasant, and it is a satisfaction to know that possibly I have rendered you some service. If in the future I can help you in any way, I shall count it a privilege to have your calls.

While any forecast of weather or crop conditions necessarily involves elements of uncertainty, the outlook for a good honey-flow in the North Central States the coming season could hardly be better. An order placed now will insure having the supplies on hand when needed, and will avoid the possibilities of vexatious delays when the rush is on. The December discount of 4 per cent is also a consideration.

May the Yuletide bring you much of joy, and the New Year hold in store for you blessings manifold.

E. W. Peirce, Zanesville, O.

HOW TO KEEP BEES

By ANNA BOTSFORD COMSTOCK

THIS is an excellent book for the beginner.

Nothing better. We cordially recommend it to all who are learning bee-keeping by their own effort. Having commenced bee-keeping three times, the talented author is in a position to furnish the right kind of advice. You can not go wrong in ordering this book. It is charmingly written and easily understood. Price \$1.10 postpaid by

LEARN BEEKEEPING from the Beginning

"First Lessons In Beekeeping" and the American Bee Journal, one year, Both for Only **\$1.00**

"First Lessons in Beekeeping" is a 190-page book telling all that the beginner need know. . . . It has an attractive paper cover, and many illustrations.

"Doolittle's Scientific Queen-rearing," and the American Bee Journal, one year, Both for Only **\$1.00**

Doolittle's "Scientific Queen-rearing" book contains 126 pages, and is bound in leatherette with round corners. It tells in the clearest way possible just how the famous queen-breeder, Mr. G. M. Doolittle, rears the best of queen bees in perfect accord with Nature's way. As all know, Mr. Doolittle has spent some 40 years in rearing queens and producing honey. He has no superior as a queen-breeder. You can learn to rear fine queens by following his directions.

The beginner will want "First Lessons;" the older beekeeper should have "Scientific Queen-rearing." You will not regret it if you send your \$1.00 now and get either one of these books with the JOURNAL, as the JOURNAL itself is worth more than the total cost.

AMERICAN BEE JOURNAL, . . . HAMILTON, ILLINOIS

The Use of Root's

With the increased interest in and demand for the better grades of extracted honey, all beekeepers, large and small, are interested in honey-extractors. The time was when the small beekeeper thought it didn't pay to produce extracted honey, and, as a consequence, he lost quite a large per cent of the actual profit his bees might have made him. For instance, during the past summer, with the remarkable honey-flow there was in many localities, even in an apiary of ten colonies an extractor might have been made to pay for itself in a single day. Record honey-flows like this demand a rapid handling of the combs if the bees are to take advantage of the flow of nectar. They can not make new combs fast enough to store the nectar that must be gathered within a few hours, or it is lost. If the filled combs can be taken from a hive, extracted, and replaced at once, they will be filled again with astonishing rapidity, and hundreds of pounds of honey harvested that would otherwise have been lost.

A one-horse-power air-cooled gasoline-engine connected to an eight-frame extractor. For economy of floor-space and convenience of the levers this arrangement is perhaps the best.

For the small apiary the hand-run extractors are usually sufficient; but where any number of colonies are kept from which to produce honey for the market, the power-equipped extractors are by far to be preferred. Even the first cost is very moderate; and when the wonderful work done by these machines is taken into consideration it will readily be seen that the purchase of such a machine is an investment which yields the beekeeper a handsome profit.

The popularity of these machines is perhaps best estimated by reading letters received from a few of our customers who are using them, and from the fact that our trade in them is constantly increasing. We now have in the process of making, twelve Root Automatic Extractors for one beekeeper in the West, who has 2000 colonies of bees, and maintains 15 yards. Certainly this large beekeeper would not make such an investment were he not sure of results.

Honey Extractors

Our extractors are carefully made from selected materials, and with ordinary usage will last for years. All power machines are fully equipped ready for running. We make extractors in all sizes from two to eight frame, and the power machines in four, six, and eight frame size, or larger, if ordered special. The prices range from \$9.50 for a small hand-run machine to \$52 for an eight-frame power-equipped machine. A one-horse-power air-cooled engine is \$60, and a 1 $\frac{3}{4}$ horse-power water-cooled, \$65.

These machines are run by a one-horse-power gasoline-engine which may be put to so many other good uses about the place you will wonder how you ever got along without it.

A word about the power extractor I purchased from you through H. L. Jones, of Goodna. I found it to work very satisfactorily, and it will do all it is claimed to do, and more. I use the gasoline-engine for several purposes besides driving the eight-frame extractor, such as driving the washing-machine for the lady of the house, and corn cracking and grinding. I consider it one of the best speculations I made in connection with the apiairy.

Pittsworth, Queensland.

F. C. GOLDER.

Yours of the 16th, also the brake-band for power-extractor, came to hand. Thanks for sending it so promptly. This is my second season with the power extractor. I would not be without it now, even if I had only fifty colonies.

DAVID RUNNING.

Grindstone City, Mich., July 19, 1910.

Uncapping Knife

Just a word about the new steam uncapping knife which seems to go quite naturally with the power extractors. No more perfect device has ever been put into the hands of beekeepers, and one who has any considerable amount of uncapping to do should not be another season without this knife. Steam may be generated for this in a half-gallon can over a single-burner oil-stove. We furnish the knife complete with the hose for \$5.00, and with boiler for \$6.00.

As regards the steam uncapping-knife, I think it a grand investment, so far ahead of the cold knife that it will pay any ordinary beekeeper to have the outfit. I purchased an outfit one year ago for my home yard, and thought so much of it that I got another this year for my outyard.

WM. ELLIOTT.

Adelaide, Ont., September 28, 1911.

I received the extractor I ordered of you some time ago. It arrived in good shape. I set it up and extracted 143 quarts of honey, and sold it at 35 cts. a quart. The extractor is just fine—does the work completely.

F. D. KING.

Athens, Ohio, Aug. 16, 1912.

The engine I got of you this spring has done fine. We ran it all fall, and never had any trouble at all.

V. V. DEXTER.

North Yakima, Wash., Jan. 18, 1911.

Root's Steam Uncapping-knife.—A half-gallon can over a single flat-wick oil-stove furnishes the steam necessary.

"The Standard Paper for Business Stationery"

Old Hampshire Bond

Cigar Coupons Look Like Bank Notes—Across the Room

YOU know the difference when you take hold of them—just as you recognize the genuineness of Old Hampshire Bond by its feel and crackle. An Old Hampshire Bond letter may be forwarded through several addresses—it can follow you around the world and, when you get it, the chances are you have to *cut* open the envelope.

Did you ever get a letter, broken in the fold, in an envelope hastening to dissolution? There is a thought here. It's not the way your letter looks *when you sign it*—it's the way *it looks when read*, that accounts for the difference in quality and cost of stationery.

You will enjoy looking through the Old Hampshire Bond Book of Specimens. It shows a wide selection of ideal letter-heads and business forms. You are sure to like one style of printing, lithographing or engraving, on white or one of the fourteen colors of Old Hampshire Bond. Ask for this book on your present letterhead.

HAMPSHIRE PAPER COMPANY, South Hadley Falls, Mass.

The only paper makers in the world making bond paper exclusively—including "The Stationery of a Gentleman" (Old Hampshire Bond in boxed form with envelopes) for personal correspondence

Factory Prices for the Asking— on Genuine Witte Engines

**FREE
Engine
Book**

THE genuine Witte—conceded the best farm engine in America—now offered at actual wholesale prices. Yes, this is the engine that has lead the gasoline engine field for 25 years. Dealers have been getting the highest prices for the Witte. Now you can get one at actual factory price—what the dealer paid—and have the finest engine in your county.

Our Gas Well Saves You Many Dollars More

We do more than give you ordinary factory prices. We are the *only* manufacturers who have our own gas well. Power, testing, forge, foundry and heating fuels cost us nothing. You get the benefits. But you couldn't afford to own any other engine even if the Witte cost twice as much—because an average of 1 cent for every horse-power per hour cuts gasoline bills in half—pays for your engine in no time.

Every part guaranteed 5 years—full rated horse power on minimum gasoline guaranteed too. Built in all sizes from 1½ to 40 h. p., every one tested to 10% over load.

A Wonderful Invention! X-Ray Incubator Uses Only One Gallon of Oil to a Hatch

Requires Only One Filling of Lamp

SHIPPED direct to you from X-Ray factory. No agents—no dealers. Guaranteed to please. Ordered filled same day received. Freight prepaid anywhere! X-Ray incubator has lamp underneath—square in the center—and not on the side. Thus it is the only one with perfect heating system. Egg-chamber is always at proper temperature—there's no cold side. Oil tank holds from 4 to 8 qts. of oil—only 4 qts. are needed for an entire hatch. Lamp is filled just once. Automatic Trip—exclusive X-Ray patent—cuts down flame at burner when egg-chamber gets too hot. No excess heat escapes—so only one gallon of oil is needed.

X-Ray Incubator

Built Different From Other Machines—has lid on top, with 2 double-glass panels. Thermometer is always in sight. To ventilate or turn eggs simply raise glass top. Eggs are never removed from X-Ray. X-Ray is only one made on right principle with lamp where it should be.

Nutmeg Italian queens, leather color, after June 1, \$1.00. A. W. YATES, Hartford, Ct.

Well-bred bees and queens. Hives and supplies. J. H. M. COOK, 70 Cortlandt St., New York.

Improved golden-yellow Italian queens for 1912; beautiful, hustling, gentle workers. Send for price list. E. E. LAWRENCE, Doniphan, Mo.

QUEENS.—Improved red-clover Italians, bred for business; June 1 to Nov. 15, untested queens, 75 cts.; select, \$1.00; tested, \$1.25 each. Safe arrival and satisfaction guaranteed.

H. C. CLEMONS, Boyd, Ky.

Quirin's famous improved Italian queens, nuclei, colonies, and bees by the pound, ready in May. Our stock is northern-bred and hardy; five yards wintered on summer stands in 1908 and 1909 without a single loss. For prices, send for circular.

QUIRIN-THE-QUEEN-BREEDER, Bellevue, Ohio.

PUBLICATIONS ON

BEE CULTURE

Please use coupon below, checking the numbers of items wanted.

The pamphlets and booklets listed below are of more than ordinary interest:

- 1 **My First Season's Experience with the Honey-bee.** By the "Spectator," of the *Outlook*, of New York. A ten-page leaflet detailing the experiences of this well-known writer. You will read the leaflet through before you lay it down. Free.
- 2 **The Bee-keeper and Fruit-grower.** A 15-page booklet giving actual facts regarding the value of bees to fruit, and showing how bee-keeping may be doubly profitable to the fruit-grower. Fruit-growers are realizing as never before the necessity of having honey-bees in close proximity to their blossoming fruit. Free.
- 3 **Bee-keeping for Sedentary Folk.** A 24-page leaflet reciting the actual experiences of an amateur bee-keeper, showing what equipment is best, points derived, etc. Free.
- 4 **Catalog of Bee-keepers' Supplies.** Our complete catalog will be mailed free to any address on request.
- 8 **Habits of the Honey-bee.** By Dr. E. F. Phillips. A somewhat scientific handling of the habits and anatomy of the bee. Price 10 cts.
- 9 **How to Keep Bees.** A book of 328 pages detailing in a most interesting manner the experience of a beginner in such a way as to help other beginners. Price \$1.00 postpaid.
- 10 **The A B C of Bee Culture.** A complete encyclopedia of bees, of 578 pages, fully illustrated, \$1.50 postpaid; half leather, \$2.
- 11 **Cleanings in Bee Culture.** A 64-page illustrated semi-monthly magazine, the leading exponent of bee culture in this country. Ten cents per issue, but to new subscribers we will furnish it six months for 25 cts.
- 12 **Back-yard Bee-keeping.** Six interesting lessons written in readable newspaper style. Many facts to encourage the City Bound man or woman with the back-to-the-land longing. Free.
- 15 **Truth About Sweet Clover.** Interesting booklet of nearly 100 pages. Tells of value of sweet clover for honey, for plowing under, as fertilizers of the soil, and food for horses, cattle, swine, sheep, etc. Free.

The coupon below may be used as an order sheet by properly checking the numbers of items wanted and adding your signature, and remittance, if required.

SPECIAL NOTICES

By OUR BUSINESS MANAGER

EXTRACTED HONEY.

We have secured some of the finest extracted honey this season, and can ship promptly at the following special prices:

WHITE CLOVER, the standard honey of the East. In case lots of two five-gallon cans, 120 lbs. at ten cents per pound; in five-case lots at 9½ cts., and in ten-case lots at 9 cts. Or we can furnish it in one-gallon screw-top cans at \$1.60 per gallon in one-gallon lots, or \$1.50 per gallon in ten-gallon lots.

SWEET CLOVER, very fine, at the same price for all quantities named as the white clover.

ALFALFA, preferred by many, and a little cheaper. Case lots at 9½ cts.; five cases at 9 cts.; ten cases at 8½ cts.; in one-gallon cans at \$1.50; ten cans at \$1.40.

AMBER, from the fall flowers of different localities, 8½ cts. per pound in case lots; 8 cts. in five-case lots, and 7½ cts. in ten-case lots. In one-gallon cans, \$1.30 per gallon; \$1.20 per gallon in ten-gallon lots.

If you are interested in buying twenty cases or more of one kind or assorted, write us for special prices.

At this season of the year nearly all of the honey is candied. If you want it in the liquid state, please mention this in ordering.

THE FIRM OF TOEPPERWEIN & MAYFIELD, SUPPLY DEALERS IN TEXAS, UNDER A NEW MANAGEMENT; DEATH OF W. M. MAYFIELD.

We regret to announce that Mr. W. M. Mayfield, Secretary and Treasurer of the Toepperwein & Mayfield Co., of San Antonio, Texas, died recently in that city. Shortly before the death of Mr. Mayfield Mr. Udo Toepperwein sold out his interest to Messrs. R. W. Hearne and B. L. Raborn, well-known business men of San Antonio. The retirement of the older members of the company will in no way change the policies of the new management except to increase materially the capital with the view of carrying a large stock of supplies. Mr. Morris, who has been practically the manager of the Toepperwein & Mayfield Co., will continue, we understand, with the new management. In this connection we give herewith an announcement they are putting out.

We take this opportunity to advise our friends and customers, as well as the public in general, of a change of ownership and management of the Toepperwein & Mayfield Co., occasioned by the retirement from the company of Mr. Udo Toepperwein.

Mr. Toepperwein's interests have been taken over by Messrs. R. W. Hearne and B. L. Raborn, both well-known business men of San Antonio. It is the intention of the new management to increase materially the capital of the company, with the view of carrying a stock of supplies that will meet all the requirements of the trade. This will enable us to effect prompt shipments at all times, and thus avoid any delay and annoyance to customers on account of shortage of stock.

It will be our endeavor to accord our customers all possible courtesies and consideration in any matters that may arise. Mistakes will occur at times, as is only natural, and we only ask that they be brought to our attention so that they may be rectified. Our customers may be assured of the best quality of goods at as reasonable prices as are consistent with business methods.

TOEPPERWEIN & MAYFIELD COMPANY.

We are pleased to advise that Messrs. Hearne & Raborn are strong financially, and will be in position to serve the patrons of the old company even better than before. They own a large warehouse, and will no doubt be glad to see any of their friends and patrons whenever they are in the city.

In reference to the death of Mr. Mayfield, which, we may say, was not unexpected, we may add that his loss will be felt not only by his beekeeping friends but by a large circle of friends. He was a Mason and Odd Fellow, and also a member of the Fraternal Brotherhood. Surviving him are a widow and son. It is presumed, of course, the son will now be an active partner with the other gentlemen mentioned. We predict for the new management a large measure of success.

SPECIAL NOTICES

A. I. ROOT

CLUBBING RATES.

GLEANINGS IN BEE CULTURE and *Practical Farmer*, 1 year, \$1.50; GLEANINGS IN BEE CULTURE and *Rural New Yorker*, 1 year, \$1.75; GLEANINGS IN BEE CULTURE and *Sunday School Times*, 1 year, rate up to January 1, 1913, \$1.75; rate after January 1, 1913, \$2.00. In order to secure the rate of \$1.75, it will be necessary that the orders reach us in time to be dated from January 1. Otherwise the rate for the combination will be \$2.00.

Many readers of GLEANINGS IN BEE CULTURE wish to include one or all of these publications among those papers which reach their homes regularly. For the benefit of such the clubbing rates above are given.

THE STORY OF THE BIBLE FROM GENESIS TO REVELATION, BY CHARLES FOSTER.

Told in simple language. Adapted to all ages, but especially to the young. Three hundred illustrations. More than 750,000 copies have been sent out, and the book has been translated into foreign languages.

Those who have read GLEANINGS for twenty years or more will remember what was said about the Story of the Bible, or, rather, how much was said about it over twenty years ago. I do not know just how I got hold of it; but as it is a good-sized book, with the whole Bible in regular order in language so plain that a child can understand it, it appealed to me at once. Of course I took it home and showed it to Mrs. Root and the children. Our youngest son, then nearly ten years old, took a great fancy to it. The result of his reading it so many times is that he has now and has had all his life a splendid bird's-eye view of the whole Bible—something of great value to any man, woman, or child; and I think even the enemies of the Bible, if there are any such in this present day and age, will be compelled to admit as much. In this age of information it is of vast importance that every person know just what is and what is not in the Holy Scriptures.

I think I make no mistake in saying that just now the Bible is valued and read more than ever before since the world began. It is now printed in some thing like 300 languages—that is, whole or in part; and it may not be out of place for me to state that the work of printing the Bible has resulted in giving an alphabet and a printed form to fully 150 languages. Of what other book can that be said?

Especially when Christmas is approaching, many wise and thoughtful parents think of this beautiful book as a Christmas present. If I am correct, the original author, Charles Foster, is dead; but a son of his has been for some time at work in getting out a new enlarged and revised edition. There are now over 700 pages in the book; and as it weighs about 3 lbs. the postage on it alone is 24 cts. There are 300 beautiful illustrations in it. As a rule I do not greatly admire Holy-Land pictures, such as we have in some of our Sunday-school books and papers; but the illustrations in this are beautiful and

wholesome. And besides these pictures there are four or five colored plates that are gems of art. The publisher informs me that they are copies of valuable old pictures in his possession. This book is not only valuable for children, but many a grown-up man and woman will find it a great help in straightening out the chronology of the Bible.

The regular price of the book is \$1.50, including postage; but by a special arrangement we are enabled to furnish it clubbed with *GLEANINGS* for only \$1.50 if you will send 24 cts. also to pay for postage; and all subscribers who have already paid for *GLEANINGS* one year or more in advance may have the book for an even dollar if they will send 24 cts. also for postage.

Convention Notices

The annual meeting of the New York State Beekeepers' Association will be held in connection with a beekeepers' institute under the direction of the State Department of Agriculture at Rochester, N. Y., Dec. 17, 18, 19, in the parlors of the Hotel Rochester.

IRVING KENYON, Sec.

The annual meeting of the Eastern New York Beekeepers' Association will be held in the Common-council Chamber, City Hall, Albany, N. Y., Wednesday, Dec. 27, 1912. Sessions at 10:00 A. M. and 1:30 P. M. Besides the regular business meeting and election of officers and delegates the following program will be presented:

Beekeeping as a Side Issue in the Professions, Rev. I. V. Lobdell, Troy.
Some Observations on Swarming, I. Van Auken, Altamont.

Extracted vs. Comb Honey, J. R. Snyder, Warwarsing.

Scientific Bee Culture, C. B. Loomis, Department of Agriculture, Albany.

Shall we Become a Branch of the National Beekeepers' Association? President.

Question-box.

A full attendance is desired.

W. D. WRIGHT, Pres., Altamont, N. Y.
S. DAVENPORT, Sec., Indian Fields, N. Y.

The New Jersey branch of the National Beekeepers' Society will hold its annual meeting in the Entomological Building at New Brunswick, N. J., on Friday, Dec. 20, 1912. The following is the program:

MORNING SESSION, 10:30.

Address by President J. H. M. Cook,

Essex Falls, N. J.

"Gentle Bees"—Penn G. Snyder, Swarthmore, Pa.

"Judging Honey"—Harold Horner, Philadelphia, Pa.

Question-box.

12:00, lunch and recess.

AFTERNOON SESSION, 1:00.

"The Hive in Winter"—Dr. C. D. Cheney, Hoboken, N. J.

"The Relation of the State Entomologist to the Beekeeper"—Dr. T. J. Huddle, New Brunswick, N. J.

"Bee Behavior," illustrated with slides—Dr. E. F. Phillips, Washington, D. C.

"Management for Comb Honey"—W. E. Housel, Hampton, N. J.

"The Future of New Jersey Beekeeping"—E. G. Carr, New Egypt, N. J.

Election of officers for 1913.

Election of delegate to national convention at Cincinnati Feb. 12 and 13.

Election of representative to State Board of Agriculture, Trenton, Jan. 7, 8, 9, 10, 1913.

PRIZES.

For best display of comb honey in beeway sections, one A B C of Bee Culture, 1913 edition, cloth.

For best display of comb honey in 4 1/4 x 1 1/2 plain sections, one A B C of Bee Culture, 1913 edition, half leather.

For best display of comb honey in 4 x 5 sections, one A B C of Bee Culture, 1913 edition, leather.

For best display of old books on beekeeping, one Langstroth on the Honeybee, 1859 edition.

Above are offered by the A. I. Root Co.

For best 5 pounds extracted honey, one Italian queen.

This promises to be one of the best meetings ever held. Ladies are especially invited.

J. H. M. COOK, Pres.

E. G. CARR, Sec.

The following is the program of the Washington State Beekeepers' annual convention, to be held Jan. 8 and 9, 1913:

MORNING SESSION, 9 A. M.

Meeting called to order by A. E. Burdick, President.

Annual report of President.

Annual report of Treasurer.

Annual report of Secretary.

Address of welcome by A. J. Splawn, Mayor, at 10 o'clock.

Response by President A. E. Burdick.

Paper from Miss A. A. Byers, Chelan County.

AFTERNOON SESSION, 1:30 P. M.

Meeting called to order by President Burdick.

Spring Management of Bees, Robert Cissna, followed by discussion.

Address by Mr. George W. York, President National Beekeepers' Association.

Preparing for Winter, Virgil Sires, followed by discussion.

Paper from the Dadants.

Paper from A. G. Kuykendall, Grandview.

JAN. 9, MORNING SESSION, 9 A. M.

Meeting called to order by President A. E. Burdick.

Should we Produce a larger Percentage of Comb Honey? C. W. Higgins, Wapato, followed by discussion.

What has been the Success of the Honey-producers' Association in Handling the 1912 Crop? A. E. Burdick, President.

What Benefits do the Beekeepers Enjoy from the National Association? E. B. Tyrrell, Sec. National Association, followed by discussion.

Should the Manufacturers and Beekeepers be More in Sympathy with each other?

Paper from The A. I. Root Co., followed by discussion.

Paper from some beekeeper, of a scientific nature.

Banquet at noon.

AFTERNOON SESSION, 1:30 P. M.

Meeting called to order by President Burdick.

Election of officers for ensuing year.

My Method of Handling Bees at Swarming Time, By Lee G. Simmons, Vice-president, Ellensburg, Wash., followed by short discussion.

Weather Conditions favorable for the Secretion of Nectar in Bloom, by S. King Clover, followed by discussion.

Paper from F. C. Fischer.

We will discuss ways and means of enlarging the membership of the Association, and of making the meetings more educational, enthusiastic, and entertaining.

The Washington honey-producers will hold their annual election of officers, and other business necessary to be transacted, on the 10th, following the beekeepers' convention at 9:00 A. M. in the courthouse, by order of the President and Secretary.

The A. I. Root Co.:—My apiary is the most northern of any in Canada, at least I think in the province of Quebec. I have 140 colonies, and we have had a dandy year for clear honey. I expect four tons. I have sold at twelve cents per pound for the last three years. I have no trouble to get the price. What I have left after my home trade I sell to Ottawa customers and the West.

Give my best wishes to our old friend, A. I. Root. I hope he may long live to write up the Home Department.

Yarm, Que., Aug. 27. ROBERT MCJANET.

The A. I. Root Co.:—I started with 8 colonies in spring, and have increased by natural swarming to 17 colonies, and made 650 lbs. of comb honey. I sold all my honey at home, and could have sold that much more. I have paid for all the colonies, hives, surplus supers, and have about \$18.00 left. My eight colonies wintered perfectly, and it was the coldest winter we ever had. It was as low as 30 below zero, and my hives stood on summer stands, not protected by any thing—not even a windbreak. I merely placed sail duck over the brood-frames, put on a super cover, and then telescope cover—no packing. I don't suppose I lost an average of 100 bees per colony.

Frederick, Md., Nov. 16, 1912. B. U. CRIST.

Nearly 500 Subjects Pertinent to Modern Bee-keeping are Authoritatively Discussed

ADVANCED BEE CULTURE is a beautifully printed book. Best plate paper has been used throughout its 200 pages, with the result that the many fine illustrations are unusually clear in every detail. Bound in attractive and substantial cloth. A volume whose appearance and unquestionable worth justify entitle it to a place in the library of every bee-keeper. No more important work on this fascinating subject has recently appeared.

The untimely death on May 30, 1911, of Mr. W. Z. Hutchinson, author of

Advanced Bee Culture

marked the passing of one of the most brilliant writers who have ever championed the cause of the honey-bee. . . . Perhaps no better tribute to this talented man could be given than that contained in the following paragraph from a testimonial article on MR. HUTCHINSON'S life by Prof. A. J. Cook, in GLEANINGS:

"No one could know him and his work without convincing proof that he stood in the very front ranks of our bee-keeping fraternity. His quick intellect, coupled with his close attention to details, won for him, at the very start, phenomenal success as a queen-breeder. To this, apiculture owes its great good fortune in securing his life-long service in its development. He was temperamentally exact and methodical, transparently honest, and if I were to select one word to characterize our brother it would be genuineness. He was delightfully companionable, and always alert for any new idea or suggestion touching the interests of the work, to which he was so entirely devoted. His quick apprehension and terse clear-cut style as a writer, made him a most reliable exponent of all that was latest and best in the theory and practice of his beloved art."

Most fortunate for all bee-keepers is the fact that Mr. Hutchinson's life was spared just beyond the point when he had completed his reading and correction of the editorial proofs of the new edition of ADVANCED BEE CULTURE. Only a few short days after an editorial by Mr. E. R. Root, editor of GLEANINGS IN BEE CULTURE, who revised Mr. Hutchinson's book, had appeared, the call came, and this sterling, upright man, whom everybody loved, was taken home. Read what Mr. Root has to say of Mr. Hutchinson's book:

As a writer on bees Mr. Hutchinson has few equals. For clearness of style and accuracy of judgment he is second to none. His enthusiasm shines forth on every page. His selection of the new and the useful from an extended discussion is intuitive. The last edition of "Advanced Bee Culture," as well as the new edition before, is made up of the best ideas of our best experts, properly classified and condensed by a master of the art of boiling down discussions. I do not hesitate to say that this is one of the most valuable books on bees that was ever put out; and while its title would indicate that it is designed only for the advanced bee-keeper, yet I am sure that a large number of beginners in the business will find it exceedingly helpful and interesting, especially if they will take it in connection with some other work like the "A B C and X Y Z of Bee Culture," or any text-book designed especially for the beginner class.

\$1.50 Buys a Two-dollar Value

ADVANCED BEE CULTURE costs \$1.00 per copy. GLEANINGS IN BEE CULTURE (semi-monthly)—known and read by bee-keepers throughout the world—\$1.00 for an annual subscription. It is our pleasure, however, to offer this interesting and most useful combination—the book here described, and GLEANINGS one year, both for \$1.50. It is a value you will very seldom find—really it is a good \$2.00 worth for \$1.50.

Foreign postage, 60 cents extra; Canadian postage, 80 cents extra.

SUBURBAN LIFE

The Countryside Magazine

Are You Going to Build?

If so, send us 25 cents, and we will mail to your address the last three issues of SUBURBAN LIFE, as follows:

September—House-Building Number

October —House-Furnishing Number

November —Country Home Number

These issues are full of house-building plans and suggestions of the very latest character, and are worth a year's subscription to the intending builder. This is an introductory offer. The regular price of the magazine is \$3.00 a year—25 cts. a copy.

Send in the coupon at once, with full name and address.
